In this engaging and readable book, Peter Decherney tells the story of Hollywood, from its nineteenth-century origins to the emergence of internet media empires. He recounts how the studio system rose out of the ashes of Thomas Edison's trust to create the handful of companies that have dominated global screens and imaginations for more than 100 years. Throughout, he reveals that the elements we take

Embarking on motherhood was a very different affair in the 1950s to what it is today. When American journalist Pamela Druckerman had a baby in Paris, she didn't aspire to become a "French parent." But she noticed that French children slept through the night by two or three months old. They ate braised leeks. They played by themselves while their parents sipped coffee. And yet French kids were still boisterous, curious, and creative. Why? How? With a notebook stashed in her diaper bag, Druckerman set out to investigate—and wound up sparking a national debate on parenting.

The stories are often offered to us as quite false, frankly and beautifully fantastic, and they are sometimes insistently said to be true. But they are stories in both cases, and there are very few films, even in avant-garde art, that don't imply or quietly slip into narrative. This story element is important, and is closely connected with the simplest fact about moving pictures: they do move. Even the older meanings of the word 'film' - a membrane, a covering, a veil, an emanation - now seem to have something to do with moving pictures. Many people believe films are an instrument of illusion, an emphatic way of seeing what is not there; and this capacity has been both celebrated and condemned.*

pedagogy. All of them ask whether cine-love can inform the serious study of cinema. Chapter by chapter, writers approach this question from various perspectives: some draw on aspects of students' love of cinema as a starting point for rethinking familiar films or generating new kinds of analyses about the medium itself; others reflect on how their own cinephilia informs the way they teach cinema; and still others offer new ways of writing (both verbally and audiovisually) with a love of cinema in the age of new media. Together, they form a collection that is as much a guide for teaching cinephilia as it is an energetic dialogue about the ways that cinephilia and pedagogy enliven and rejuvenate one another. have discussed it for over two thousand years. Humour can serve many functions; it can be used to relieve stress, to promote goodwill among strangers, to dissipate tension within a fractious group, to display intelligence, and some have even claimed that it improves health and fights sickness. In this Very Short Introduction Noel Carroll examines the leading theories of humour including The Superiority Theory and The Incongruity Theory. He considers the relation of humour to emotion and cognition, and explores the value of humour, specifically in its social functions. He argues that humour, and the comic amusement that follows it, has a crucial role to play in the construction of communities, but he also demonstrates that the social aspect of humour raises questions

'Laughter', says Eric Weitz, 'may be considered one of the most extravagant physical effects one person can have on another without touching them'.
