sensational theories while ignoring the true determinant of income inequality: the production of wealth. We cannot properly understand inequality if we focus exclusively on the distribution of wealth and ignore wealth production factors such as geography, demography, and culture. Sowell contends that liberals have a particular interest in misreading the data and chastises them for using income inequality as an argument for the welfare state. Refuting Thomas Piketty, Paul Krugman, and others on the left, Sowell draws on accurate empirical data to show that the inequality is not nearly as extreme or sensational as we have been led to believe. Critics often warn that American schools are failing, and that our students are ill-prepared for the challenges the future holds, and may even be "the dumbest generation." We can think of these claims as warning about a Stupidity Epidemic. This essay begins by tracing the history of the idea of that American students, teachers, and schools are somehow getting worse; the record shows that critics have been issuing such warnings for more than 150 years. It then examines four sets of data that speak to whether educational deterioration is taking place. First, data on educational attainment show a clear trend: more students are getting more education. Second, standardized test scores suggest that American students are performing somewhat better; certainly most test scores do not indicate that students are getting worse. Third, measures of popular knowledge also show evidence of

improvement. Fourth, there is clear evidence that IQ scores have been rising. In other words, the best available evidence fails to support claims about a Stupidity Epidemic. The essay then turns to exploring several reasons why belief in educational decline is so common, and concludes by suggesting some more useful ways to think about educational problems. The goal of this new, unique Series is to offer readable, teachable "thinking frames" on today ' s social problems and social issues by leading scholars, all in short 60 page or shorter formats, and available for view on <http://routledge.customgateway.com/routledge-social-issues.html> For instructors teaching a wide range of courses in the social sciences, the Routledge Social Issues Collection now offers the best of both worlds: originally written short texts that provide "overviews" to important social issues as well as teachable excerpts from larger works previously

Over the last few decades, economists and psychologists have quietly documented the many ways in which a person's IQ matters. But, research suggests that a nation's IQ matters so much more. As Garrett Jones argues in *Hive Mind*, modest differences in national IQ can explain most cross-country inequalities. Whereas IQ scores do a moderately good job of predicting individual wages, information processing power, and brain size, a country's average score is a much stronger bellwether of its overall prosperity. Drawing on an expansive array of research from psychology, economics, management, and political science, Jones argues that intelligence and cognitive skill are significantly more important on a national level than on an

individual one because they have "positive spillovers." On average, people who do better on standardized tests are more patient, more cooperative, and have better memories. As a result, these qualities—and others necessary to take on the complexity of a modern economy—become more prevalent in a society as national test scores rise. What's more, when we are surrounded by slightly more patient, informed, and cooperative neighbors we take on these qualities a bit more ourselves. In other words, the worker bees in every nation create a "hive mind" with a power all its own. Once the hive is established, each individual has only a tiny impact on his or her own life. Jones makes the case that, through better nutrition and schooling, we can raise IQ, thereby fostering higher savings rates, more productive teams, and more effective bureaucracies. After demonstrating how test scores that matter little for individuals can
