Building on the successful top-down approach of previous editions, the Sixth Edition of Computer Networking continues with an early emphasis on application-layer paradigms and application programming interfaces (the top layer), encouraging a hands-on experience with protocols and networking concepts, before working down the protocol stack to more abstract layers. This book has become the dominant book for this course because of the authors’ reputations, the precision of explanation, the quality of the art program, and the value of their own supplements.

Catholics are often reluctant to begin reading the Bible. this is for various reasons. Perhaps we hang on to the notion that the Bible is a book meant for display, for recording the dates of family members’ births, baptisms, marriages, and deaths. Or perhaps we once attempted to read the Bible and discovered there a culture entirely different from ours ‘and came to the conclusion that the Bible had nothing relevant to say to us in this place and time. Alternative to these and the many other reasons Catholics might give for not reading Scripture, Stephen Binz offers practical explanations that will make the Bible less foreign and more familiar. Introduction to the Bible allows readers to discover how the Bible came to be, how to choose a Bible translation, how to interpret the Bible within Catholic tradition, and how to benefit the most from Bible study. Readers will find practical explanations that will make the Bible less foreign and more familiar. Stephen J. Binz is a Catholic biblical scholar, speaker, and counselor. He did graduate studies at the Pontifical Biblical Institute in Rome and is a member of the Catholic Biblical Association and the Society of Biblical Literature. Binz is the author of numerous books on the Bible, including The Passion and Resurrection Narratives of Jesus and The God of Freedom and Life, both published by Liturgical Press.

In the 1950s, a method called Material Requirements Planning (or “MRP”) changed the world of manufacturing forever. But times have changed—customer tolerance times are shorter, product variety and complexity has increased, and supply chains have spread around the world. MRP is dramatically failing in this “New Normal.” Demand Driven Material Requirements Planning (DDMRP), Version 3 presents a practical, proven, and emerging method for supply chain planning and execution that effectively brings the 1950s concept into the modern era. The foundation of DDMRP is based upon the connection between the creation, protection, and acceleration of the flow of relevant materials and information to drive returns on asset performance in the New Normal. Using an innovative multi-echelon “Position, Protect and Pull” approach, DDMRP helps plan and manage inventories and materials in today’s more complex supply scenarios, with attention being paid to ownership, the market, engineering, sales, and the supply base. It enables a company to decouple forecast error from supply order generation and build in line to actual market requirements, and promotes better and quicker decisions and actions at the planning and execution level. DDMRP is already in use by MAJOR Global 1000 companies. This book is THE definitive work on DDMRP, and will be required as courseware for all those taking the Certified Demand Driven Planner (CDDP) Program. New Features in Version 3 Full color, with the use in specific, consistent, and focused ways to clearly and effectively highlight planning, execution, and model reconfiguration priorities. Expanded Appendix E, looking at the most recent innovations of DDMRP. Revised graphics scattered throughout the book.

Pervasive networking in the last years has contributed to a hitherto unknown transparency of global markets. The emerging global procurement strategy was understood as a chance to rethink the relocation of existing production facilities to pro?it from existing differences in price and performance as a resource-saving factor. Many companies tended towards a reduction of their vertical integration by outsourcing sections of their value chain. These contracted services of production result in higher transport volumes, increased complexity of supply processes and new requirements on -gistic networks.
