These aspects are dealt with in 12 plenary lectures, 48 oral present poster papers, which were critically selected from an impressive response from some 30 countries. Both fundamental and applied aspe The deactivation of catalysts in important industrial processes like fluid bed catalytic cracking hydrotreatment, hydrodesulfurization, ca reforming, hydrodenitrogenation, steam reforming, hydrodemetallization, hydrocracking, Fischer-Tropsch synthesis, propane dehydrogena phthalic anhydride synthesis received considerable attention. Featured on two major television documentaries! In December 1980, Larry Warren was a member of the Air Force security police stationed at RAF Bentwaters, a NATO base in Great Britain. On the night of the 28th he was on guard duty when he was taken by truck to join other Air Force personnel to investigate a disturbance in a Rendlesham Forest about five miles away, which turned out to be a landed UFO. This was the third night of UFO activity in the area and by far the most profound. When the men were debriefed the next day, they were warned to tell no one about what they had seen-as "bullets are cheap." And so began what would turn out to be the best documented

and most significant military-UFO incident in history. This remarkable story, told with the help of investigative writer Peter Robbins, was the basis of two blockbuster television documentaries. "Warren's firsthand account explodes with authentic detail. A riveting, fascinating, and important book." -Whitley Strieber, author of Communion "[H]as the force of a well-told mystery novel, yet it is all disturbingly true. A major contribution to the literature." -Budd Hopkins, author of Missing Time "[O]ne gripping version of the story of this classic UFO case and its aftermath." -Publisher's Weekly "This book is dynamite. Meticulously researched, gripping, provocative..." -Nick Pope, author of Open Skies, Closed Minds "[Q]uestions on these UFO sightings are still being asked in Parliament. If you read this gripping book you will see why." -Focus, journal of the British Ministry of Defence.

This text covers the basic facts and interpretation of microscopic anatomy. It emphasizes the relationship and concepts by which cell and tissue structure are inextricably linked with their function. Numerous photomicrographs and electron micrographs should amplify the text and remind the user

of the laboratory basis of the study of histology. An atlas section containing 105 color plates is also included. Emphasis on diagrams, illustrations, and charts that summarize morphologic and functional features of cells, tissues, and organs, and inclusion of clinical correlations in each chapter to further illustrate the direct application of basic histological information to diagnosis, prognosis, pathobiology, and clinical aspects of disease, should appeal to students, who are anxious to see how the basic sciences taught in the first two years of medical school relate to the clinical aspects thereafter.
