

## Jan 2014 C2 International Paper

The 2014-2015 Ebola outbreak in West Africa shocked the world with its devastation and its rapid migration to multiple continents. As the systems meant to respond to this sort of epidemic failed, the disease exposed not just weaknesses in international infectious disease surveillance and management, but the failures of governments, humanitarian organizations, and international institutions to handle the legal, ethical, and economic questions that arose with an event of this scale. GLOBAL MANAGEMENT OF INFECTIOUS DISEASE AFTER EBOLA unites the insights of Ebola’s first responders with those of the world’s foremost experts in law, economics, vaccine development, and global migration to identify missed opportunities from the Ebola crisis -- and to apply these lessons to emerging infectious disease threats. Framed with critical discussions of both the global health financing infrastructures that precipitated the response and the ethical and human rights dilemmas that resulted from it, this volume is much more than postmortem to an outbreak: it is a vital, sometimes damning examination of where we’ve been and where we’re going in the face of emerging infectious diseases.

Discover how to invest your capital to achieve a powerful, lasting impact on the world. The Global Handbook of Impact Investing: Solving Global Problems Via Smarter Capital Markets Towards A More Sustainable Society is an insightful guide to the growing world-wide movement of Impact Investing. Impact investors seek to realize lasting, beneficial improvements in society by allocating capital to sources of impactful and sustainable profit. This Handbook is a how-to guide for institutional investors, including family offices, foundations, endowments, governments, and international organizations, as well as academics, students, and everyday investors globally. The Handbook’s wide-ranging contributions from around the world make a powerful case for positive impact and profit to fund substantive, lasting solutions that solve critical problems across the world. Edited by two experienced and distinguished professionals in the sustainable investing arena and authored by two dozen renowned experts from finance, academia, and multilateral organizations from around the world, the Global Handbook of Impact Investing educates, inspires, and spurs action towards more responsible investing across all asset classes, resulting in smarter capital markets, including how to: · Realize positive impact and profit · Integrate impact into investment decision-making and portfolio · Allocate impactful investments across all asset classes · Apply unique Impact Investing frameworks · Measure, evaluate and report on impact · Learn from case examples around the globe · Pursue Best Practices in Impact Investing and impact reporting While other resources may take a local or limited approach to the subject, this Handbook gathers global knowledge and results from public and private institutions spanning five continents. The authors also make a powerful case for the ability of Impact Investing to lead to substantive and lasting change that addresses critical problems across the world.

The current global financial system may not withstand the next global financial crisis. In order to promote the resilience and stability of our global financial system against future shocks and crises, a fundamental reconceptualisation of financial regulation is necessary. This reconceptualisation must begin with a deep understanding of how today’s financial markets, regulatory initiatives and laws operate and interact at the global level. This book undertakes a comprehensive analysis of such diverse areas as regulation of financial stability, modes of supply of financial services, market infrastructure, fractional reserve banking, modes of production of global regulatory standards and the pressing need to reform financial sector ethics and culture. Based on this analysis, Reconceptualising Global Finance and its Regulation proposes realistic reform initiatives, which will be of primary interest to regulatory and banking legal practitioners, policy makers, scholars, research students and think tanks.

This handbook pursues an integrated communication approach. Drawing on the various fields of organizational communication and their relevance for CSR, it addresses innovative topics such as big data, social media, and the convergence of communication channels, as well as the roles they play in a successfully integrated CSR communication program. Further aspects covered include the analysis of sector-specific, cross-cultural, and ethical challenges related to the effective communication of CSR. This handbook is unique in its consistent focus on integrated communication. It is of interest not only for the scientific discourse, but will also benefit those corporations that do not only seek to operate in a socially responsible manner, but also to communicate their efforts to their various stakeholders. Besides its significant value for researchers and professionals, the book can also be used as a reference for undergraduate and graduate students interested in successful CSR communication.

This book is the first to examine oil constraints and tourism, and addresses one of the key challenges for the tourism industry in the future. It provides an estimate of how much oil tourism consumes globally and summarises state-of-the-art information on oil resources, oil data and public discourse. The volume also offers an analysis of the economic implications of increasing oil prices for tourism and discusses key dimensions relevant for tourism in a post peak oil world. It will be useful for tourism stakeholders globally, postgraduate students in tourism and resource management, ecological economists and those researching issues of resource efficiency, carrying capacity and global environmental change.

This book constitutes the refereed proceedings from the Third International Workshop on Graphical Models for Security, GramSec 2016, held in Lisbon, Portugal, in June 2016. The 9 papers presented in this volume were carefully reviewed and selected from 23 submissions. The volume also contains the invited talk by Xinming Ou. GramSec contributes to the development of well-founded graphical security models, efficient algorithms for their analysis, as well as methodologies for their practical usage.

The Great Financial Crisis in 2007/8 has triggered a widespread debate about the causes and the social and environmental consequences of the lack of long-term investment around the world. This volume, the third in the Sustainable Company book series produced by the GOODCORP network of academic and trade union experts on corporate governance, presents a ‘stakeholder’ approach to the problem. The analysis and policy prescriptions presented here go beyond mainstream economic analysis by highlighting the need for major changes in the way resources are saved, distributed and invested in the interests of a sustainable and just economy and society. Individual chapters explore different dimensions of the problem of short-termism and possible policy responses. Key themes in this volume include the state of the debate on long-term investment in Europe, increasing worker voice in pension fund investment and implementing financial transaction taxes to discourage financial market speculation. Policy proposals beyond the mainstream include strengthening worker participation rights (including the right to non-financial information from companies) and using international investment treaties to support social and environmental standards.

Long-term investment and the Sustainable Company: a stakeholder perspective. Vol. III

Singapore Hawker Classics Unveiled

How Los Angeles, Hong Kong, and China deal with such urban environmental issues as ports, goods movement, air pollution, water quality, transportation, and public space. Over the past four decades, Los Angeles, Hong Kong, and key urban regions of China have emerged as global cities—in financial, political, cultural, environmental, and demographic terms. In this book, Robert Gottlieb and Simon Ng trace the global emergence of these urban areas and compare their responses to a set of six urban environmental issues. These cities have different patterns of development: Los Angeles has been the quintessential horizontal city, the capital of sprawl; Hong Kong is dense and vertical; China’s new megacities in the Pearl River Delta, created by an explosion in industrial development and a vast migration from rural to urban areas, combine the vertical and the horizontal. All three have experienced major environmental changes in a relatively short period of time. Gottlieb and Ng document how each has dealt with challenges posed by ports and the movement of goods, air pollution (Los Angeles, Hong Kong, and urban China are all notorious for their hazardous air quality), water supply (all three places are dependent on massive imports of water) and water quality, the food system (from seed to table), transportation, and public and private space. Finally they discuss the possibility of change brought about by policy initiatives and social movements.

The book discusses Indian post-independence monetary history in the context of the country’s development and the global changes of the period. The conceptual framework used is the SIO (Structure, Ideas, Institutions and Outcomes) paradigm. That is, structure and ideas become embedded in institutions and affect outcomes. Narrative history, data analysis and research reports demonstrate the dialectic between ideas and structure with respect to monetary history, aspects of India’s development, and the global institutions and events that impacted monetary choices. The history of the economy and of the global changes that affected it covers a time when major changes took place both in India and internationally. India’s greater openness is important both for it and for the world, but it occurred at a time of major global crises. How did these impact monetary choices and how did the latter help India navigate the crises while maintaining its trajectory towards greater liberalization? The book explores these and other relevant but under-analyzed questions. The initial combination of ideas and structure created fiscal dominance and made monetary policy proyclical. An aggregate supply-and-demand framework derived from forward-looking optimization subject to Indian structural constraints is able to explain growth and inflation outcomes in the light of policy actions. Using exogenous supply shocks to identify policy shocks and to isolate their effects, demonstrate that policy was sometimes exceedingly strict despite the common perception of a large monetary overhang. Surges and sudden stops in capital flow also constrained policy. But the three factors that cause a loss of monetary autonomy—governments, markets and openness—moderate each other. Markets moderate fiscal profligacy and global crises moderate market freedoms and ensure openness remains a sequenced and gradual process. The book argues greater current congruence between ideas and structure is improving institutions and contributing to India’s potential.

The 8th International Conference on Physical Modelling in Geotechnics (ICPMG2014) was organised by the Centre for Offshore Foundation Systems at the University of Western Australia under the auspices of the Technical Committee 104 for Physical Modelling in Geotechnics of the International Society of Soil Mechanics and Geotechnical Engineering. This quadrennial conference is the traditional focal point for the physical modelling community of academics, scientists and engineers to present and exchange the latest developments on a wide range of physical modelling aspects associated with geotechnical engineering. These proceedings, together with the seven previous proceedings dating from 1988, present an inestimable collection of the technical and scientific developments and breakthroughs established over the last 25 years. These proceedings include 10 keynote lectures from scientific leaders within the physical modelling community and 160 peer-reviewed papers from 26 countries. They are organised in 14 themes, presenting the latest developments in physical modelling techniques and sensors, through a wide range of soil-structure interaction problems, including shallow and deep foundations, offshore geotechnics, dams and embankments, excavations and retaining structures and slope stability. Fundamental aspects of earthquake engineering, geohazards, ground reinforcements and improvements, and soil properties and behaviour are also covered, demonstrating the increasing complexity of modelling arising from state-of-the-art technological developments and increased understanding of similtude principles. A special theme on education presents the latest developments in the use of physical modelling techniques for instructing undergraduate and postgraduate students in geotechnical engineering.

Produced as a celebration of Singapore’s renowned culinary heritage, Singapore Hawker Classics Unveiled, tells you everything you ever needed to know – and more! – about 25 of our favourite dishes. The 25 delicious recipes featured will allow you to recreate your favourite classic hawker treats at home and inspire you to look at these familiar dishes in a new light – each dish includes its traditional presentation together with an additional interpretation with a modern twist. Moreover, every dish is covered in great detail, including information on its heritage, its aroma,

taste and texture, its nutritional value, as well as clear step-by-step instructions and photographs. This book reports on cutting-edge research in innovative systems interfaces, with an emphasis on both lifecycle development and human-technology interaction, especially in the cases of virtual, augmented and mixed reality systems. It describes advanced methodologies and tools for evaluating and improving interface usability and covers new models, as well as case studies and good practices. The book reports on considerations of the human, hardware, and software factors in the process of developing interfaces for optimizing total system performance, especially innovative computing technologies for teams dealing with dynamic environments, while minimizing total ownership costs. One of the main purposes is to discuss forces currently shaping the nature of computing and systems including: the needs of decreasing hardware costs; the importance of portability, which translates to the modern tendency of hardware miniaturization and technologies for reducing power requirements; the necessity of a better assimilation of computation in the environment; and social concerns about access to computers and systems for people with special needs. The book, which is based on the AHFE 2016 International Conference on Human Factors and System Interactions, held on July 27-31, 2016, in Walt Disney World®, Florida, USA, offers a timely survey and practice-oriented guide for systems interface users and developers alike.

The apparent contradiction between statistical significance and biological relevance has diminished the value of statistical methods as a whole in toxicology. Moreover, recommendations for statistical analysis are imprecise in most toxicological guidelines. Addressing these dilemmas, Statistics in Toxicology Using R explains the statistical analysis of selected experimental data in toxicology and presents assay-specific suggestions, such as for the in vitro micronucleus assay. Mostly focusing on hypothesis testing, the book covers standardized bioassays for chemicals, drugs, and environmental pollutants. It is organized according to selected toxicological assays, including: Short-term repeated toxicity studies Long-term carcinogenicity assays Studies on reproductive toxicity Mutagenicity assays Toxicokinetic studies The book also discusses proof of safety (particularly in ecotoxicological assays), toxicogenomics, the analysis of interlaboratory studies and the modeling of dose-response relationships for risk assessment. For each toxicological problem, the author describes the statistics involved, matching data example, R code, and outcomes and their interpretation. This approach allows you to select a certain bioassay, identify the specific data structure, run the R code with the data example, understand the test outcome and interpretation, and replace the data set with your own data and run again.

This volume explores the domestic and transnational considerations associated with Indonesia’s ascent, referring to its rise in terms of hard and soft power and its likely trajectory in the future. The range of contributors analyse economic resources, religious harmony, security, regional relations, leadership and foreign policy.

The East Asia and Pacific Economic Update provides regular, biannual analyses of development trends and economic policy issues across the East Asia and Pacific region.

Information Technology (IT) is the application of computers and telecommunications equipment to store, retrieve, transmit and manipulate data, often in the context of a business or other enterprise. IT has become one of the most fundamental technologies in today’s social life, and there are many unsolved issues related to IT and its applications.Th

China has experienced a remarkable transformation since the 1990s. It now boasts the second-largest – some would argue the largest – economy in the world, having evolved from a closed economy into the leading goods-trading nation. China’s economic rise has given it increasing prominence in international monetary and financial governance, but it also exposes China to new risks associated with its integration into the global financial system. Drawing insights from economics and political science, Enter the Dragon: China in the International Financial System takes a broad conceptual approach and tackles the questions that accompany China’s ascent in international finance: What are the motivations and consequences of China’s effort to internationalize the renminbi? What is the political logic underlying China’s foreign financial policy? What forces have shaped China’s preferences and capacities in global financial governance? Enter the Dragon contributes to the ongoing debate over China’s political interests, its agenda for economic and financial cooperation, and the domestic and international implications of its economic rise. Bringing together experts from both inside and outside of China, this volume argues that China’s rise in the international financial system is a highly complex and political process, and can only be understood by incorporating analysis of domestic and international political economy.

OECD Investment Policy Reviews: Thailand

**This comprehensive book addresses the pressing need for up-to-date literature on volcanic destinations (active and dormant) and their role in tourism worldwide in chapters and case studies. The book presents a balanced view about the volcano-based tourism sector worldwide and discusses important issues such as the different volcanic hazards, potential for disasters and accidents and safety recommendations for visitors. Individual chapters and case studies are contributed by a number of internationally based co-authors, with expertise in geology, risk management, environmental science and other relevant disciplines associated with volcanoes. Also covered are risk aspects of volcano tourism such as risk perception, risk management and public safety in volcanic environments. Discussions of the demand for volcano tourism, including geotourism and adventure tourism as well as some historical facts related to volcanoes, with case studies of interesting socio-cultural settings are included.**

**This book presents papers from the International Gear Conference 2014, held in Lyon, 26th-28th August 2014. Mechanical transmission components such as gears, rolling element bearings, CVTs, belts and chains are present in every industrial sector and over recent years, increasing competitive pressure and environmental concerns have provided an impetus for cleaner, more efficient and quieter units. Moreover, the emergence of relatively new applications such as wind turbines, hybrid transmissions and jet engines has led to even more severe constraints. The main objective of this conference is to provide a forum for the most recent advances, addressing the challenges in modern mechanical transmissions. The conference proceedings address all aspects of gear and power transmission technology and range of applications (aerospace, automotive, wind turbine, and others) including topical issues such as power losses and efficiency, gear vibrations and noise, lubrication, contact failures, tribo-dynamics and nano transmissions. A truly international contribution with more than 120 papers from all over the world A judicious balance between fundamental research and industrial concerns Participation of the most respected international experts in the field of gearing A wide range of applications in terms of size, power, speed, and industrial sector**

**Building on the foundation set in Volume I—a landmark synthesis of research in the field—Volume II is a comprehensive, state-of-the-art new volume highlighting new and emerging research perspectives. The contributors, all experts in their research areas, represent the international and gender diversity in the science education research community. The volume is organized around six themes: theory and methods of science education research; science learning; culture, gender, and society and science learning; science teaching; curriculum and science education. Each chapter presents an integrative review of the research on the topic it addresses—pulling together the existing research, working to understand the historical trends and patterns in that body of scholarship, describing how the issue is conceptualized within the literature, how methods and theories have shaped the outcomes of the research, and where the strengths, weaknesses, and gaps are in the literature. Providing guidance to science education faculty and graduate students and leading to new insights and directions for future research, the Handbook of Research on Science Education, Volume II is an essential resource for the entire science education community.**

**This book proposes the introduction of a development-related perspective to scholarly critique of the human body’s commodification. Navahandi contends that the commodification of human body parts reflects a modern form of such well-known historical phenomena as slavery and colonization, and can be considered a new and additional form of appropriation and extraction of resources from the Global South. What are the commonalities between hair trade, surrogacy, kidney sale and attraction of brains? The author argues that these all characterize a world where increasingly everything can be traded or is considered to be tradeable. A world where, similar to any other goods, body parts have entered the global market either legally or illegally. Through a series of multidisciplinary comparative studies, the book explores how forms commodification of the human body are fuelled by issues of poverty in the Global South, and inequality in transnational relations.**

States reject inequality when they choose to ratify the International Covenant on Economic, Social and Cultural Rights (ICESCR), but to date the ICESCR has not yet figured prominently in the policy calculus behind States’ international economic decisions. This book responds to the modern challenge of operationalizing the ICESCR, particularly in the context of States’ decisions within international trade, finance, and investment. Differentiating between public policy mechanisms and institutional functional mandates in the international trade, finance, and investment systems, this book shows legal and policy pathways for States to feasibly translate their fundamental duties to respect, protect, and fulfill economic, social and cultural rights into their trade, finance, and investment commitments, agreements, and contracts. It approaches the problem of harmonizing social protection objectives under the ICESCR with a State’s international economic obligations, from the designing and interpreting international treaty texts, up to the institutional monitoring and empirical analysis of ICESCR compliance. In examining public policy options, the book takes into account around five decades of States’ implementation of social protection commitments under the ICESCR; its normative evolution through the UN Committee on Economic, Social and Cultural Rights, and the Committee’s expanded fact-finding and adjudicative competences under the Optional Protocol to the ICESCR; as well as the critical, dialectical, and deliberative roles of diverse functional interpretive communities within international trade, finance, and investment law. Ultimately, the book shows how States’ ICESCR commitments operate as the normative foundation of their trade, finance, and investment decisions.

Thailand has had a remarkable economic development trajectory over the past 60 years and foreign direct investment (FDI) has been pivotal in this success. Thailand was one of the first movers in opening up to manufacturing FDI and in establishing proactive investment promotion and facilitation policies.

The two-volume set LNICST 150 and 151 constitutes the thoroughly refereed post-conference proceedings of the First International Internet of Things Summit, IoT360 2014, held in Rome, Italy, in October 2014. This volume contains 74 full papers carefully reviewed and selected from 118 submissions at the following four conferences: the First International Conference on Cognitive Internet of Things Technologies, COIOTE 2014; the First International Conference on Pervasive Games, PERGAMES 2014; the First International Conference on IoT Technologies for HealthCare, HealthIoT 2014; and the First International Conference on IoT as a Service, IoTaaS 2014. The papers cover the following topics: user-centric IoT, artificial intelligence techniques for the IoT, the design and deployment of pervasive games for various sectors, such as health and wellbeing, ambient assisted living, smart cities and societies, education, cultural heritage, and tourism; delivery of electronic healthcare: patient care and medical data management; smart objects; networking considerations for IoT; platforms for IoTaaS; adapting to the IoT environment; modeling IoTaaS; machine to machine support in IoT.

It has been over 50 years since the beginning of the Israeli occupation of the Palestinian Territories. It is estimated that there are over 600,000 Israeli settlers living in the West Bank and East Jerusalem, and they are supported, protected, and maintained by the Israeli state. This book discusses whether international criminal law could apply to those responsible for allowing and promoting this growth, and examines what this application would reveal about the operation of international criminal law. It provides a comprehensive analysis of how the Rome Statute of the International Criminal Court could apply to the settlements in the West Bank through a close examination of the potential operation of two relevant Statute crimes: first, the war crime of transfer of population; and second, the war crime of unlawful appropriation of property. It also addresses the threshold question of whether the law of occupation applies to the West Bank, and how the principles of individual criminal responsibility might operate in this context. It explores the relevance and coherence of the legal arguments relied on by Israel in defence of the legality of the settlements and considers how these arguments might apply in the context of the Rome Statute. The work also has wider aims, raising questions about the Rome Statute’ s capacity to meet its aim of establishing a coherent and legally effective system of international criminal justice.

This innovative book examines the maritime component of China’s Belt and Road Initiative (BRI), focusing on three key trade routes and addressing the question of how China protects its overseas assets. Gerald Chan explores China’s rising maritime power, using geo-developmentalism as a theoretical framework to analyse the country’s development of port facilities and infrastructure along important trade routes. Through developing these sea routes, he argues that a new global is in the making.

This book provides solid empirical evidence into the role that countries and communities of origin play in the migrant integration processes at destination. Coverage explores several important questions, including: To what extent do policies pursued by receiving countries in Europe and the US complement or contradict each other? What effective contribution do they make to the successful integration of migrants? What obstacles do they put in their way? This title is the second of complementary volumes, each of which is designed to stand alone and provide a different approach to the topic. Here, renowned contributors present evidence from the studies of 55 origin countries on five continents and 28 countries of destination in Europe where both quantitative and qualitative research was conducted. In addition, the chapters detail results of a unique worldwide survey of 900 organisations working on migrant integration and diaspora engagement. The res

ult on an innovative methodology and new approaches to the analysis of large-scale survey data. This examination into the tensions between integration policies and diaspora engagement policies will appeal to academics, policymakers, integration practitioners, civil society organisations, as well as students. Overall, the chapters provide empirical evidence that builds upon a theoretical framework developed in a complementary volume: Migrant integration between Homeland and Host society. Vol. 1. Where does the country of origin fit? by A. Unterreiner, A. Weinar, and P. Fargues.

"How would the humanities change if we grappled with the ways in which digital and virtual places are designed, experienced, and critiqued? In Rethinking Virtual Places, Erik M. Champion draws from the fields of computational sciences and other place-related disciplines to argue for a more central role for virtual space in the humanities. For instance, recent developments in neuroscience could improve our understanding of how people experience, store, and recollect place-related encounters. Similarly, game mechanics using virtual place design might make digital environments more engaging and learning content more powerful and salient. In addition, Champion provides a brief introduction to new and emerging software and devices and explains how they help, hinder, or replace our traditional means of designing and exploring places. Perfect for humanities scholars fascinated by the potential of virtual space, Rethinking Virtual Places challenges both tradition

and recent evaluation methods to address the complicated problem of understanding how people evaluate and engage with the notion of place"--
