*A Washington Post Best Children's Book of 2021 A New York Public Library Best Book of 2021 The creators of The Old Truck set sail with an old boat and an evocative, intricately crafted exploration of home and family. Off a small island, an old boat sets sail and a young boy finds home. Together, boy and boat ride the shifting tides, catching wants and wishes until fate calls for a sea change. Brothers and collaborators Jarrett and Jerome Pumphrey's newest picture book is a masterfully crafted celebration of the natural world and tribute to the families we make and the homes that we nurture.*

*With a multidisciplinary perspective, Planning Power examines British and French colonial town and country planning efforts in Africa. Drawing out similarities in the colonial administrative and economic strategies of the two powers, rather than emphasizing the differences, the book offers an unusually nuanced view of African planning systems in a time of upheaval and political change. In showing how the colonial authorities sought to gain political and social control in Africa, it can be seen how their will to exert political power influenced every area of planning practice during this era. This unique comparative analysis of British and French colonial town planning – covering the entire sub-Saharan African region – takes theories from a wide range of disciplines, including political science, history, urban and regional planning, economics and geography to paint a comprehensive picture of the subject. Written by a prolific researcher and writer in the political-economy of urban and regional planning in Africa, Planning Power is valuable reading for students and academics in a range of disciplines.*

One day Josh had a big, brown bag idea: to wear a paper bag over his head. He thought it was a good idea. His mother did not. Neither did his bus driver, his teacher, or his soccer coach. What could Josh possibly be hiding? A surprise ending will keep kids giggling—and from taking haircuts into their own hands!

Area Studies in the Global Age

The British Library General Catalogue of Printed Books to 1975

This edited collection, first published in 1985, deals with a number of the major themes central to the study of industrial geography. Topics under discussion include new methodologies, the growing service industries, foreign investment and the industrial geography of the developing world. With a detailed introduction from Michael Pacione and comprehensive coverage, the title reflects the extent to which the field of industrial geography changed over the second half of the twentieth century in response to economic change, incorporating the growth of multinational enterprises and the influence of globalisation, alongside traditional discussion of the manufacturing industry. Providing an essential background to developments in industrial geography, this title will be valuable to students with an interest in the economics, characteristics and advancement of industrial change.

Today, interest in networks is growing by leaps and bounds, in both scientific discourse and popular culture. Networks are thought to be everywhere – from the architecture of our brains to global transportation systems. And networks are especially ubiquitous in the social world: they provide us with social support, account for the emergence of new trends and markets, and foster social protest, among other functions. Besides, who among us is not familiar with Facebook, Twitter, or, for that matter, World of Warcraft, among the myriad emerging forms of network-based virtual social interaction? It is common to think of networks simply in structural terms – the architecture of connections among

objects, or the circuitry of a system. But social networks in particular are thoroughly interwoven with cultural things, in the form of tastes, norms, cultural products, styles of communication, and much more. What exactly flows through the circuitry of social networks? How are people's identities and cultural practices shaped by network structures? And, conversely, how do people's identities, their beliefs about the social world, and the kinds of messages they send affect the network structures they create? This book is designed to help readers think about how and when culture and social networks systematically penetrate one another, helping to shape each other in significant ways.

*From cognitive neuroscientist Dr. Christian Jarrett, a fascinating book exploring the science of personality and how we*

*can change ourselves for the better. What if you could exploit the plasticity of personality to change yourself in specific ways? Would you choose to become less neurotic? More self-disciplined? Less shy? Until now, we've been told that we're stuck with the personality we were born with: The introvert will never break out of their shell, the narcissist will be forever trapped gazing into the mirror. In *Be Who You Want*, Dr. Christian Jarrett takes us on a thrilling journey, as he not only explores the ways that life changes us, but shows how we can deliberately shape our personalities to influence the course of our lives. Dr. Jarrett draws on the latest research to provide evidence-based ways to change each of the main five personality traits, including how to become more emotionally stable, extraverted, and open-minded. Dr. Jarrett features compelling stories of people who have achieved profound personality change such as a gang-leader turned youth role model, a drug addict turned ultra-runner, and a cripplingly shy teenager turned Hollywood mega-star. He also delves into the upsides of the so-called Dark Triad of personality traits—narcissism, Machiavellianism, and psychopathy—and how we might exploit their advantages without ourselves going over to the dark side. Filled with quizzes and interactive exercises to help us better understand the various aspects of our personalities, life stories, and passions, *Be Who You Want* will appeal to anyone who has ever felt constrained by how they've been characterized and wants to pursue lasting change.*

Public transit is a powerful tool for addressing a huge range of urban problems, including traffic congestion and economic development as well as climate change. But while many people support transit in the abstract, it's often hard to channel that support into good transit investments. Part of the problem is that transit debates attract many kinds of experts, who often talk past each other. Ordinary people listen to a little of this and decide that transit is impossible to figure out. Jarrett Walker believes that transit can be simple, if we focus first on the underlying geometry that

all transit technologies share. In *Human Transit*, Walker supplies the basic tools, the critical questions, and the means to make smarter decisions about designing and implementing transit services. *Human Transit* explains the fundamental geometry of transit that shapes successful systems; the process for fitting technology to a particular community; and the local choices that lead to transit-friendly development. Whether you are in the field or simply a concerned citizen, here is an accessible guide to achieving successful public transit that will enrich any community.

Geography, Culture and Education

This book highlights the increasingly important contribution of geographical theory to the understanding of social change, values, economic & political organization and ethical imperatives. As a cohesive collection of chapters from well-known geographers in Britain and North America, it reflects the aims of the contributors in striving to bridge the gap between the historical-materialist and humanist interpretations of human geography. The book deals with both the contemporary issues outlined above and the situation in which they emerge: industrial restructuring, planning, women's issues, social and cultural practices and the landscape as context for social action.

This interdisciplinary volume is a new introduction to area studies in the framework of whole-world thinking.

Emerging in the United States after World War II, area studies have proven indispensable to American integration in the world. They serve two main purposes: to equip future experts with rich cultural-historical and political-economic knowledge of a world area in its global context and advanced foreign language proficiency, and to provide interested readers with well-founded analyses of a vast array of the world's communities. Area Studies in the Global Age examines the interrelation between three constructions central to any culture—community, place, and identity—and builds on research by scholars specializing in diverse world areas, including Africa; Central, East, and North Asia; Eastern and East Central Europe; and Latin America. In contrast to sometimes oversimplified, globalized thinking, the studies featured here argue for the importance of understanding particular human experience and the actual effects of global changes on real people's lives. The rituals, narratives, symbols, and archetypes that define a community, as well as the spaces to which communities attach meaning, are crucial to members' self-perception and sense of agency. Editors Edith W. Clowes and Shelly Jarrett Bromberg have put into practice the original mission of US area studies, which were intended to employ both social science and humanities research methods. This important study presents and applies a variety of methodologies, including interviews and surveys; the construction of databases; the analysis of public rituals and symbols; the examination of archival documents as well as contemporary public commentary; and the close reading and interpretation of fiction, art, buildings, cities, and other creatively produced works in their social contexts. Designed for advanced undergraduate and beginning graduate students in allied disciplines, Clowes and Bromberg's volume will also appeal to readers interested in internationally focused humanities and social sciences.
