

Java 2 The Complete Reference Fifth Edition

Take JAVA to the max with expert help Beginning, intermediate, and advanced JAVA programmers alike take note: everything you need to get the best performance out of your applets and servlets is packed into JAVA 2.0: The Complete Reference. World- renowned authors, Patrick Naughton (ESPN's Sportszone, Disney, and ABC News Web sites), Herb Schildt, the world's leading programming author, and Joseph O'Neil add 30% more material to their hugely successful past editions of this best seller. They show you exactly how to develop, compile, debug, and run Java applications and applets quickly and confidently. Plus you'll become expert on all of Java's new features including: *Servlets used to build powerful, scalable, robust Web applications *The Swing component set, a GUI toolkit that simplifies the development of visual components such as menus, tool bars, dialogs *Utility class updates *Java2-D, which enables you to build advanced 2D graphics and images

The official book on the Rust programming language, written by the Rust development team at the Mozilla Foundation, fully updated for Rust 2018. The Rust Programming Language is the official book on Rust: an open source systems programming language that helps you write faster, more reliable software. Rust offers control over low-level details (such as memory usage) in combination with high-

level ergonomics, eliminating the hassle traditionally associated with low-level languages. The authors of The Rust Programming Language, members of the Rust Core Team, share their knowledge and experience to show you how to take full advantage of Rust's features--from installation to creating robust and scalable programs. You'll begin with basics like creating functions, choosing data types, and binding variables and then move on to more advanced concepts, such as:

- Ownership and borrowing, lifetimes, and traits
- Using Rust's memory safety guarantees to build fast, safe programs
- Testing, error handling, and effective refactoring
- Generics, smart pointers, multithreading, trait objects, and advanced pattern matching
- Using Cargo, Rust's built-in package manager, to build, test, and document your code and manage dependencies
- How best to use Rust's advanced compiler with compiler-led programming techniques

You'll find plenty of code examples throughout the book, as well as three chapters dedicated to building complete projects to test your learning: a number guessing game, a Rust implementation of a command line tool, and a multithreaded server. New to this edition: An extended section on Rust macros, an expanded chapter on modules, and appendixes on Rust development tools and editions.

The Definitive Guide to JavaServer Faces 2.0 Fully revised and updated for all of the changes in JavaServer Faces (JSF) 2.0, this comprehensive

volume covers every aspect of the official standard Web development architecture for JavaEE. Inside this authoritative resource, the co-spec lead for JSF at Sun Microsystems shows you how to create dynamic, cross-browser Web applications that deliver a world-class user experience while preserving a high level of code quality and maintainability. JavaServer Faces 2.0: The Complete Reference features an integrated sample application to use as a model for your own JSF applications, with code available online. The book explains all JSF features, including the request processing lifecycle, managed beans, page navigation, component development, Ajax, validation, internationalization, and security. Expert Group Insights throughout the book offer insider information on the design of JSF. Set up a development environment and build a JSF application Understand the JSF request processing lifecycle Use the Facelets View Declaration Language, managed beans, and the JSF expression language (EL) Define page flow with the JSF Navigation Model, including the new "Implicit Navigation" feature Work with the user interface component model and the JSF event model, including support for bookmarkable pages and the POST, REDIRECT, GET pattern Use the new JSR-303 Bean Validation standard for model data validation Build Ajax-enabled custom UI components Extend JSF with custom non-UI components Manage security, accessibility, internationalization, and localization Learn how to work with JSF and Portlets

from the JSF Team Leader at Liferay, the leading Java Portal vendor Ed Burns is a senior staff engineer at Sun Microsystems and is the co-specification lead for JavaServer Faces. He is the co-author of JavaServer Faces: The Complete Reference and author of Secrets of the Rock Star Programmers. Chris Schalk is a developer advocate and works to promote Google's APIs and technologies. He is currently engaging the international Web development community with the new Google App Engine and OpenSocial APIs. Essential Java Programming Skills--Made Easy!
Fully updated for Java Platform, Standard Edition 8 (Java SE 8), **Java: A Beginner's Guide, Sixth Edition** gets you started programming in Java right away. Bestselling programming author Herb Schildt begins with the basics, such as how to create, compile, and run a Java program. He then moves on to the keywords, syntax, and constructs that form the core of the Java language. This Oracle Press resource also covers some of Java's more advanced features, including multithreaded programming, generics, and Swing. Of course, new Java SE 8 features such as lambda expressions and default interface methods are described. An introduction to JavaFX, Java's newest GUI, concludes this step-by-step tutorial. **Designed for Easy Learning: Key Skills & Concepts**

-- Chapter-opening lists of specific skills covered in the chapter
Ask the Expert -- Q&A sections filled with bonus information and helpful tips
Try This -- Hands-on exercises that show you how to apply your skills
Self Tests -- End-of-chapter quizzes to reinforce your skills
Annotated Syntax -- Example code with commentary that describes the programming techniques being illustrated

Best-selling genius Herb Schildt covers everything from keywords, syntax, and libraries, to advanced features such as overloading, inheritance, virtual functions, namespaces, templates, and RTTI—plus, a complete description of the Standard Template Library (STL).

This book is the most complete and up-to-date resource on Java from programming guru, Herb Schildt -- a must-have desk reference for every Java programmer.

Your Ultimate "How-To" Guide to Java Programming!
Legendary programming author Herb Schildt shares some of his favorite programming techniques in this high-powered Java "cookbook." Organized for quick reference, each recipe shows how to accomplish a practical programming task. A recipe begins with a list of key ingredients (the classes, methods, and interfaces) followed by step-by-step instructions that

show how to assemble them into a complete solution. Detailed discussions explain the how and why behind each step, and a full code example puts the recipe into action. Each recipe ends with a list of options and alternatives that suggest ways to adapt the technique to fit a variety of situations. Whether you're a beginner or an experienced pro, you'll find recipes that are sure to satisfy your Java programming appetite! Topics include: String Handling Regular Expressions File Handling Applets Servlets Swing The Collections Framework Multithreading Formatting Data Learn how to: Find substrings that match a regular expression Use regular expressions to tokenize a string Compress and decompress data files Create a ZIP file Format time and date Use printf() to display formatted data Reverse, rotate, and shuffle a list Use a Comparator with a collection Create a simple Swing application Create a Swing-based applet Create a simple servlet Use a cookie with a servlet Synchronize threads Monitor a thread's state Set and obtain a thread's priority Use JScrollPane to automate scrolling Access a resource using HttpURLConnection Schedule a task for future execution Use reflection to dynamically create an object and call methods Much, much more "This book contains the essentials for using Java to develop interactive content for intranets and the World Wide Web." "You'll learn all about Java programming - from using Java buttons to creating custom components and building QUIs with the 2D API - and you'll quickly take advantage of all that Java has to offer. Get up to speed with Java, than move on to professional Web programming and advanced Java components such as Swing and JavaBeans."--BOOK

Java Programming: A Comprehensive Introduction is designed for an introductory programming course using Java. This text takes a logical approach to the presentation of core topics, moving step-by-step from the basics to more advanced material, with objects being introduced at the appropriate time. The book is divided into three parts: Part One covers the elements of the Java language and the fundamentals of programming. An introduction to object-oriented design is also included. Part Two introduces GUI (Graphical User Interface) programming using Swing. Part Three explores key aspects of Java's API (Application Programming Interface) library, including the Collections Framework and the concurrency API. Herb Schildt has written many successful programming books in Java, C++, C, and C#. His books have sold more than three million copies. Dale Skrien is a professor at Colby College with degrees from the University of Illinois-Champaign, the University of Washington, and St. Olaf College. He's also authored two books and is very active in SIGCSE.

The new edition of Herb Schildt's bestselling reference is completely updated to cover the newest standard of the C++ programming language. C++ The Complete Reference, Fifth Edition is a thoroughly revised new edition covering the new International Standard for C++, known as C++0x, which incorporates many new and exciting features. This comprehensive guide offers full coverage of C++, the premier language of high-performance systems software development, and includes in-depth details on all of the new features and functionalities of C++0x.
