This book explains how telemedicine can offer solutions capable of improving the care and survival rates of cancer patients and can also help patients to live a normal life in spite of their condition. Different fields of application – community, hospital and home based – are examined, and detailed attention is paid to the use of tele-oncology in rural/extreme rural settings and in developing countries. The impact of new

technologies and the opportunities afforded by the social web are both discussed. The concluding chapters consider eLearning in relation to cancer care and assess the scope for education to improve prevention. No medical condition can shatter people's lives as cancer does today and the need to develop strategies to reduce the disease burden and improve quality of life is paramount. Readers will find this new volume in Springer's TELe Health series to be a rich source of

information on the important contribution that can be made by telemedicine in achieving these goals. Artificial Intelligence (AI) in Healthcare is more than a comprehensive introduction to artificial intelligence as a tool in the generation and analysis of healthcare data. The book is split into two sections where the first section describes the current healthcare challenges and the rise of AI in this arena. The ten following chapters are written by specialists in each area, covering the whole healthcare ecosystem.

First, the AI applications in drug design and drug development are presented followed by its applications in the field of cancer diagnostics, treatment and medical imaging.

Subsequently, the application of AI in medical devices and surgery are covered as well as remote patient monitoring. Finally, the book dives into the topics of security, privacy, information sharing, health insurances and legal aspects of AI in healthcare.

He cuts through the hype of the AI craze—remember when it seemed plausible that IBM's Watson could cure cancer?—to explain how businesses can put artificial intelligence to work now, in the real world. His key recommendation: don't go for the “moonshot” (curing cancer, or synthesizing all investment knowledge); look for the “low-hanging fruit” to

AI will improve products and processes and make decisions better informed—important but largely invisible tasks. AI technologies won't replace human workers but augment their capabilities, with smart machines to work alongside smart people. AI can automate structured and repetitive work; provide extensive analysis of data through machine learning

Interest in and attention to entrepreneurship has exploded in recent years. Nevertheless, much of the research and scholarship in entrepreneurship has remained elusive to academics, policymakers and other researchers, in large part because the field is informed by a broad spectrum of disciplines, including

Hcit

management, finance, economics, policy, sociology, and psychology, often pursued in isolation from each other. Since its original publication in 2003, the Handbook of Entrepreneurship Research has served as the definitive resource in the field, bringing together contributions from leading scholars in these disciplines to present a holistic, multi-dimensional approach. This new edition, fully revised and updated, and

including several new chapters, covers all of the primary topics in entrepreneurship, including entrepreneurial behavior, risk and opportunity recognition, equity financing, business culture and strategy, innovation, and the impact of entrepreneurship on economic growth and development. Featuring an integrative introduction, extensive literature reviews and reference lists, the Handbook will continue to

serve as a roadmap to the rapidly evolving and dynamic field of entrepreneurship. Why attractive things work better and other crucial insights into human-centered design Emotions are inseparable from how we humans think, choose, and act. In Emotional Design, cognitive scientist Don Norman shows how the principles of human psychology apply to the invention and design of new technologies and products. In The Design

Hcit

of Everyday Things, Norman made the definitive case for human-centered design, showing that good design demanded that the user's must take precedence over a designer's aesthetic if anything, from light switches to airplanes, was going to work as the user needed. In this book, he takes his thinking several steps farther, showing that successful design must incorporate not just what users need, but must address our minds by

attending to our visceral reactions, to our behavioral choices, and to the stories we want the things in our lives to tell others about ourselves. Good human-centered design isn't just about making effective tools that are straightforward to use; it's about making affective tools that mesh well with our emotions and help us express our identities and support our social lives. From roller coasters to robots, sports cars to smart

phones, attractive things work better. Whether designer or consumer, user or inventor, this book is the definitive guide to making Norman's insights work for you.

The Making of New York's

Startup Community

Over 1,000 New York-based technology startups are currently hiring. This may come as a surprise to many who thought of New York as the capital of traditional industries such as financial services, media, advertising and fashion, but not necessarily as a high-tech hub. Yet, it is true: over the past several years the level of startup activity in the city of New York has increased at an exponential rate, reaching and surpassing Boston in number of tech companies formed and money invested. It is good news for the Bloomberg administration that

has made the creation of a high-tech industry a strategic priority after the financial collapse of 2008. It is also good news for the many investors in the city (both "angels" and venture capitalists) who have seen the number of opportunities created increase at a fast rate. And it is good news for the entrepreneurs who can finally benefit from a working ecosystem and from an influx of capital not seen since the internet bubble of the late '90s. "Tech and the City" is the first book telling the story of how and why this is happening: from the birth of Silicon Alley in the '90s to today's level of activity and

important milestones, such as the building of the Cornell NYC Tech campus. Based on over 50 interviews with entrepreneurs, angel investors, venture capitalists, university professors, members of the Bloomberg administration and other stakeholders, this book's objective is to inform and inspire the current generation of entrepreneurs. Fred Wilson, the best known venture capitalists in New York and one of the most important in the US, wrote in his foreword: "I hope this book will be an inspiration to New Yorkers to embrace the technology revolution that has taken hold in

our city. I also hope it will be an inspiration to other cities, countries, and cultures who may have missed out on the initial wave of the technology revolution." "Tech and the City" takes us on a historical and geographical tour of New York, while addressing the hot themes for entrepreneurs and investors. It is also a guide to help navigate the NYC community: how to network and become part of the community; what to read to understand and keep informed; where to raise capital; what help is available for any professional, entrepreneur, student, researcher seeking to settle in

the city. And this is just the basis for an ongoing conversation, which we hope will continue on our blog, <http://www.tech-and-the-city.com> The authors, Alessandro Piol and Maria Teresa Cometto, know the story and the industry well. Alessandro has been a New Yorker for 35 years and a venture capitalist for 20, during which he has seen firsthand the evolution of the New York entrepreneurial ecosystem. He has a deep knowledge of the tech industry and a passionate involvement in the NYC community, where he invests in, and mentors, a number of young entrepreneurs.

handling, laboratory experiments, and human resources. *New Worlds, New Horizons in Astronomy and Astrophysics* proposes enhancing innovative but moderate-cost programs in space and on the ground that will enable the community to respond rapidly and flexibly to new scientific discoveries. The book recommends beginning construction on survey telescopes in space and on the ground to investigate the nature of dark energy, as well as the next generation of large ground-based giant optical telescopes and a new class of space-based gravitational

observatory to observe the merging of distant black holes and precisely test theories of gravity. *New Worlds, New Horizons in Astronomy and Astrophysics* recommends a balanced and executable program that will support research surrounding the most profound questions about the cosmos. The discoveries ahead will facilitate the search for habitable planets, shed light on dark energy and dark matter, and aid our understanding of the history of the universe and how the earliest stars and galaxies formed. The book is a useful resource for agencies supporting the field of

In this text, Dr. Chiang introduces students to the most important methods of dynamic optimization used in economics. The classical calculus of variations, optimal control theory, and dynamic programming in its discrete form are explained in the usual Chiang fashion, with patience and thoroughness. The economic examples, selected from both classical and recent literature, serve not only to illustrate applications of the mathematical methods,

for disease prognosis & management. Further, the role of artificial intelligence and machine learning is discussed with reference to specific diseases like diabetes mellitus, cancer, mycobacterium tuberculosis, and Covid-19. The chapters provide working examples on how different types of healthcare data can be used to develop models and predict diseases using machine learning and artificial intelligence. The book also touches upon precision medicine, personalized medicine, and transfer learning, with the real examples. Further, it
