Few members from the different groups of Egyptian architects suffer from the assumption of what can be known as intellectual illiteracy in the realm of urban design. This work discusses the theme 'illiteracy of thought' versus 'intellectual ability', which is necessary for this area of cognitive thinking for to raise professional aptitude. It explains some determinations, indicators and characteristics beyond specialists' ways of thinking and focuses on the fundamental difference between intellectual illiteracy and intellectual ability. The main purpose is intellectual literacy, which is needed to activate the methods of self-criticism

on two sides—the learning side with cognitive styles and the side of professional practice. With an emphasis on the importance of the study of history to be the intro to provide knowledge to professionals. This book presents the concepts of cognitive and learning style and the intellectual human capital as frameworks to inquire about the IIUD. Consequently, to achieve this intent, the capability to take advantage from self-criticism techniques must be inquired. Aforementioned helps to explore the meanings, concepts, and linkage with IIUD through an area of specialization. In addition to, identifying what the abilities and methods are to measure, and how to integrate into theoretical instruction and learning by practice. **In Food City, a companion piece to Smartcities and Eco-Warriors, innovative architect and urban designer CJ Lim explores the issue of urban transformation and how the creation, storage and distribution of food has been and can again become a construct for the practice of everyday life. Food City investigates the reinstatement of food at the core of national and local governance -- how it can be a driver to restructure employment, education, transport, tax, health, culture, communities, and the justice system, re-evaluating how the city functions as a spatial and political entity. "In a career defined by an allegiance to the truth, Charles Bowden's reporting continually unearthed the gritty realities behind high-profile hype, including the doomed War on Drugs. His daring expeditions to Ciudad Juárez, which resulted in such books as his bestseller *Murder City*, left him with haunting images of ruthless drug lords and their prey. In *Jericho*, an unpublished work brought to light after Bowden's death in 2014, he captures the monumental corruption and addiction to power that fuel Mexico's drug cartels--and that have fueled

much of humanity's suffering throughout the ages. Interspersed with scenes from the battle of the walled city of Jericho, which in Bowden's eyes is not a story of inspiring strength but of bloodthirsty plunder, the world of El Sicario ("the hitman") unfolds in brutal detail. Bucolic settings such as the Falcon International Reservoir become the site of an unsolved murder as Bowden examines why the high murder rate in Juárez has yet to spill across the border. Yet, recalling his younger days in Louisiana and retracing the atrocities of racism in America, Bowden reveals a history where greed knows no borders, while undaunted voices (including his own) relentlessly expose its perpetrators"--

governed by experts who are confined within their individual disciplines' methodological frameworks and patterns of thinking. The consequence has been that, at present, concepts and the terminology for examining the interaction of textual and historical complexes are lacking. However, we can learn from the cognitive sciences. Until the end of the 1980s, neurophysiologists, psychologists, pediatricians, and linguists worked in complete isolation from one another on various aspects of the human brain. Then, beginning in the 1990s, one group began to focus on processes in the brain, thereby requiring that cell biologists, neurologists, psychiatrists, psychologists, linguists, and other relevant scientists collaborate with each other. Their investigation revealed that the brain integrates all kinds of information; if this were not the case, we

would not be able to catch even a glimpse of the brain's processing activity. By analogy, van Wolde's proposal for biblical scholarship is to extend its examination of single elements by studying the integrative structures that emerge out of the interconnectivity of the parts. This analysis is based on detailed studies of specific relationships among data of diverse origins, using language as the essential device that links and permits expression. This method can be called a cognitive relational approach. Van Wolde bases her work on cognitive concepts developed by Ronald Langacker. With these concepts, biblical scholars will be able to study emergent cognitive structures that issue from biblical words and texts in interaction with historical complexes. Van Wolde presents a method of analysis that biblical scholars can follow to investigate

interactions among words and texts in the Hebrew Bible, material and nonmaterial culture, and comparative textual and historical contexts. In a significant portion of the book, she then exemplifies this method of analysis by applying it to controversial concepts and passages in the Hebrew Bible (the crescent moon; the in-law family; the city gate; differentiation and separation; Genesis 1, 34; Leviticus 18, 20; Numbers 5, 35; Deuteronomy 21; and Ezekiel 18, 22, 33).
