After visiting Russia in 1921, the journalist Lincoln Steffens famously declared, "I have seen the future, and it works." Steffens referred to the social experiment of technological utopianism he found in the Soviet Union, where subway cars and farm tractors would carry the worker and peasant -- figuratively and literally -- into the twentieth century. Believing that socialism and technology together created a brave new world, Boleslaw Bierut of Poland and Kim Il Sung of North Korea -- and other leaders -- joined Russia's Vladimir Lenin and Leon Trotsky in embracing big technology with a verve and conviction that rivaled the western world's. Paul R. Josephson here explores these utopian visions of technology -- and their unanticipated human and environmental costs. He examines the role of technology in communist plans and policies and the interplay between ideology and technological development. He shows that while technology was a symbol of regime legitimacy and an engine of progress, the changes it spurred were not unequivocally positive. Instead of achieving a worker's paradise, socialist technologies exposed the proletariat to dangerous machinery and deadly pollution; rather than freeing women from exploitation in family and labor, they paradoxically created for them the dual -- and exhausting -- burdens of mother and worker. The future did not work. The fall of the Soviet Union in 1991 marked the end of communism's self-proclaimed glorious quest to "reach and surpass" the West. Josephson's intriguing study of how technology both helped and hindered this effort asks new and important questions about the crucial issues inextricably linked with the development and diffusion of technology in any sociopolitical system.

Fuels, Lubricants, Coolants, and Filters easily helps a reader to understand these wonderful liquids and filters better. By starting with the basics, it builds your knowledge step-by-step in a very structured manner. Would life be better without alcohol? It's the nagging question more and more of us are finding harder to ignore, whether we have a "problem" with alcohol or not. After all, we yoga. We green juice. We meditate. We self-care. And yet, come the end of a long work day, the start of a weekend, an awkward social situation, we drink. One glass of wine turns into two turns into a bottle. In the face of how we care for ourselves otherwise, it's hard to avoid how alcohol really makes us feel... terrible. How different would our lives be if we stopped drinking on autopilot? If we stopped drinking altogether? Really different, it turns out. Really better. Frank, funny, and always judgment free, Sober Curious is a bold guide to choosing to live hangover-free, from Ruby Warrington, one of the leading voices of the new sobriety movement. Drawing on research, expert interviews, and personal

narrative, Sober Curious is a radical take down of the myths that keep so many of us drinking. Inspiring, timely, and blame free, Sober Curious is both conversation starter and handbook—essential reading that empowers readers to transform their relationship with alcohol, so we can lead our most fulfilling lives.

The diverse Food Machinery and Chemical Corporation, later named FMC Corporation, made chemical and agricultural equipment dating back to the late 1800s. The Bean Spray Pump Company was an FMC division, changed to the John Bean Mfg. Co. in 1915 and sometime in the late 1930s an orchard owner successfully used his dependable John Bean sprayer to extinguish a neighbor's house fire. This accidental success story led to the development of the high pressure fog system which helped put out fires during WWII, and soon led

to the first High Pressure Fog Fire Fighter body that could be put on any truck chassis. Their success propelled them to become one of the revered names in the fire apparatus industry through the post-war years until their slow weaning of the Bean name and eventual demise in the early 1990s. Although primarily used by rural fire departments as an economical fire engine, many large cities even acquired FMC/Bean apparatus. Portrayed with historic black and white and contemporary color images, this book covers the whole lineup from slide-in pumper and tank combos, to custom-built brush trucks, tankers, commercial and custom chassis pumpers, and even aerials, snorkels and ladder towers.

The Mazda Miata is one of the most popular sports cars on the road today. In production for more than 20 years, the Miata's popularity has grown, and the number of aftermarket components available to the Miata enthusiast has grown, too. This immense selection of parts has made it difficult for many would-be modifiers to choose the proper combination that will help them reach the goals they have set for their two-seaters. Author and Miata expert Keith Tanner has been modifying, repairing, building, and racing Miatas for years, and he will guide you through how to best modify your car to suit your needs, starting with an explanation on how everything works and how the various parts will interact. You'll not only learn what upgrades will help you reach your goals, but also how to adjust or modify what you have to make your car work at its best. From autocross to cross-country touring, the Miata can do it all. Keith Tanner tells you how to make it happen!

This photo essay details the construction of the original Interstate Highway System in Vermont's picturesque and largely rural mountainous region through the late 1950s to late '70s. During this short time, contractor driven construction equipment innovation was remarkable: 2 1/2 cubic yard shovels were replaced with 4-8 yard shovels and then by massive wheel loaders up to 17 cubic yards; 15-22 ton rock trucks were upped to 50 tons; rudimentary spreading methods with dump trucks using tailgate chains were replaced with CMI Autogrades; and many contractors devised and built ingenious contraptions to increase production. The work attracted many large established road building firms from other States—Lane, Perini, Palazzi, L. G. Defelice, Green Construction from Des Moines, Iowa, as well as Cartier Construction, a division of McNamara from Montreal—seen here clearing and grubbing, pioneering, rock drilling, mucking peat bogs, and excavation sequences including trucks and shovels, loaders, pan scrapers, and a wheel excavator. The manufacturers of construction equipment constitute a virtual directory of the period; Caterpillar, Euclid, Allis-Chalmers, International, Dart, P&H, Bucyrus-Erie, Northwest, Lorain, Lima, Gradall, Barber-Greene, Blaw Knox, CMI, and more.

Since its introduction in 1997, the Porsche Boxster has earned a reputation as one of the world's greatest sports cars, as well as a huge, loyal following of devoted drivers. The TR4 represented a new breed of British sports car. Its modern lines, and accessories, such as wind-up windows and face-level ventilation, were a big departure from the earlier TR3 models. While TR4 mechanical parts may not have been new, the introduction of IRS (independent rear suspension) on the TR4A set a new benchmark for sports cars of that era. Performance was solid, if not spectacular, with 109 mph attainable in overdrive top, and these TRs found a ready market in all parts of the world. Now nearly 60 years old, the TR4 and TR4A still attract a huge following worldwide. This book is designed to offer owners and potential owners of these cars an insight to the common problems that can arise and how to fix them, and often making an improvement at the same time. Arranged into easy to follow sections - engine, driveline, suspension, etc - you can see not only where the problems arise, but how to solve them. Information is also provided on owners' clubs and spares suppliers to help keep your car in good condition and on the road.

Loved by both children and collectors, Britains toys and models are known for their play value and realism. Releasing its first toy soldiers in 1893 using a new hollow casting process, Britains has since produced many exciting military and civil models including the popular Home Farm series. In the 1970s, the annual catalogue contained between 340 and 370 items, including motorcycles, farm vehicles, farm animals, soldiers, guns, garden miniatures, and zoo animals. The decade also saw Britains release more than 400 new items, including New Deetail figures, which replaced the Eye Right and Swoppets lines, new metal figures, and the first aircraft for several decades, a helicopter. There was also a big expansion of farm models, including the first combine, for which Britains won the 1978 'Toy of the Year' award. Britains Toy Models Catalogues 1970 to 1979, by renowned Britains expert David Pullen, covers the models and sets issued by the company during the 1970s. It features reprints of all the annual toy model catalogues issued, reproduced in full colour. Two indexes complement the catalogues, allowing quick access to item names and catalogue numbers, and original recommended retail prices are also included.
