Fyodor Dostoyevsky's "Notes from Underground" is considered by many to be the first existentialist novel. It presents itself as an excerpt from the rambling memoirs of a bitter, isolated, unnamed narrator (generally referred to by critics as the Underground Man) who is a retired civil servant living in St. Petersburg. The first part of the story is told in monologue form, or the underground man's diary, and attacks emerging Western philosophy, especially Nikolay Chernyshevsky's "What Is to Be Done?" The second part of the book is called "Àpropos of the Wet Snow," and describes certain events that, it seems, are destroying and sometimes renewing the underground man, who acts as a first person, unreliable narrator.

Today, new technologies bring with them an everchanging panorama, forcing us to constantly update our knowledge. For this reason, quality education is necessary in all areas of knowledge and at all educational levels. The quality of our educational systems and the questions raised by reviewing whether our educational institutions offer quality education or not are some of the main reasons why quality education is a topic that, in recent years, has captured the interest of governments, researchers and lecturers, among others. This issue brings together different socioeducational actors with their concerns for and commitments to higher education, in order to achieve the aim of providing people with the competencies necessary to adapt to a changing and competitive world, in which the individual needs to engage in lifelong learning and where education must align with sustainable development goals, such as democracy, justice and equality. All of this provides us with a scenario for reflecting on and researching fundamental questions, such as how to prevent school absenteeism, how to deal with students leaving school early, how to prevent or alleviate the phenomenon of dropping out in higher education, etc. In other words, can we assume that student failure is partly due to the failure of our educational systems? Are we educating self-regulated, critical, learning-motivated and competent students? These and other questions lead us to search for measures with which we can improve the quality of our educational systems by proposing strategies and developing tools to enhance the lecturing-learning processes in our classrooms.

Developing countries commonly adopt reforms to improve their governments yet they usually fail to produce more functional and effective governments. Andrews argues that refor

governments better because they are introduced as signals to gain short-term support. These signals introduce unrealistic best practices that do not fit developing country contexts relevant by implementing agents. The result is a set of new forms that do not function. However, there are realistic solutions emerging from institutional reforms in some developing countries. These experiences suggest that reform limits, although challenging to adopt, can be overcome by focusing change on problem solving through an incremental process that involves trial and error.
