Language Education and Emotions presents innovative, empirical research into the influence of emotions and affective factors in language education, both in L1 and in foreign language education. It offers a comprehensive overview of studies authored and co-authored by researchers from all over the world. The volume opens and ends with "backbone" contributions by two of the discipline's most reputed scholars: Jane Arnold (Spain) and Jean-Marc Dewaele (United Kingdom). This book broadens our understanding of emotions, including well-known concepts such as foreign language anxiety as well as addressing the emotions that have only recently received scientific attention, driven by the positive psychology movement. Chapters explore emotions from the perspective of the language learner and the language teacher, and in relation to educational processes. A number of contributions deal with traditional, school-based contexts, whereas others study new settings of foreign language education such as migration. The book paints a picture of the broad scale of approaches used to study this topic and offers new and relevant insights for the field of language education and emotions. This book will be of great interest to academics, researchers and postgraduate students in the field of language education, psycholinguistics, sociolinguistics, and applied linguistics.

This book analyses the Association of Southeast Asian Nations (ASEAN) as a powerful actor in International Relations by examining how the ASEAN community has evolved, looking specifically at its relationship with the EU with regards to human rights. The book adds to important contemporary debates within constructivist theory, shedding light on the need for 'critical' constructivism that emphasises language and contestation and what that may entail. On an empirical level, it challenges the idea of an 'EU-centrism,' demonstrating how ASEAN is the major driving force behind its human rights and community aspirations, as well as within the ASEAN-EU relationship. Furthermore, this book engages with the introspection surrounding constructivism by addressing the trouble with 'norms,' and instead unpacking the relationship between ASEAN and the EU to show language power in play. In particular, the book looks at how language, or rather coercive language, helps us 'see' contestation in action, something that researchers sympathetic towards the idea of ASEAN's 'resistance' have been unable to show through a focus on norms. Tracing the evolution of the ASEAN community and human rights aspirations in a new light, showing how exactly the EU remains an inspiration, but not a model, and more interestingly how ASEAN demonstrates power in the relationship, the book will be of interest to academics working on Asian Studies, European Studies, International Relations Theory and human rights.

The goal of this book is to gain a clear picture of the current status and future challenges with regard to the digitalization of the supply chain – from the perspective of the suppliers, the manufacturers, and the customers. They were the target groups of the book. Digitization has touched upon all aspects of businesses, including supply chains. Technologies such as RFID, GPS, and sensors have enabled organizations to transform their existing hybrid (combination of paper-based and IT-supported processes) supply chain structures into more flexible, open, agile, and collaborative digital models. Unlike hybrid supply chain models, which have resulted in rigid organizational structures, unobtainable data, and disjointed relationships with partners, digital supply chains enable business process automation, organizational flexibility, and digital management of corporate assets. In order to reap maximum benefits from digital supply chain models, it is important that companies internalize it as an integral part of the overall business model and organizational structure. Localized disconnected projects and silo-based operations pose a serious threat to competitiveness in an increasingly digital world. The technologies discussed in this text – artificial intelligence, 3D printing, Internet of things, etc. – are beginning to come together to help digitize, automate, integrate, and improve the global supply chains. It's certainly an exciting and challenging time for both new supply chain professionals and long-time supply chain professionals.
