"More women (47.6%) receive mental health services compared with men (34.8%). Women are twice as likely as men to develop major depressive disorder. Furthermore, 10%-15% of women experience depression during the perinatal period, which makes depression one of the most common complications of childbirth (Gaynes et al. 2005). These statistics illustrate that psychiatric disorders in women are more common during the reproductive years and that the hormonal fluctuations associated with the reproductive life cycle contribute to the etiology of mental illness in women. Medical practitioners in all fields will encounter female patients with mental illness across the lifespan, particularly major depressive and anxiety disorders. Consequently, there is a great imperative for high-quality educational materials that increase the awareness of mental health issues. This book is divided into two parts. Part I provides a comprehensive overview of the reproductive life cycle and covers mental health concerns across the lifespan, including the relationship between gynecological and sexual health and mental health as well as infertility, the premenstrual period, and perimenopause. Part II is devoted to the perinatal period and offers a conceptual framework for the care of pregnant and postpartum patient, followed by evidence-based reviews of the management of psychiatric disorders (by diagnostic category), as well as covering stress in pregnancy, infant mental health, and legal/forensic issues. Critical summaries of the epidemiology, risk factors, screening methods, and clinical features are presented. This book must be required reading for all faculty and trainees in the field of perinatal and reproductive psychiatry.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration?s three region schools.It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook.This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.Robert J. Published in 1993, this brave, original novel is considered to be the finest account ever written of the complexities of a transgendered existence. Woman or man? That's the question that rages like a storm around Jess Goldberg, clouding her life and her identity. Growing up differently gendered in a blue-collar town in the 1950s, coming out as a butch in the bars and factories of the prefeminist 60s, deciding to pass as a man in order to survive when she is left without work or a community in the early 70s. This powerful, provocative and deeply moving novel sees Jess coming full circle, she learns to accept the complexities of being a transgendered person in a world demanding simple explanations: a he-she emerging whole, weathering the turbulence.
