

## Killing For Profit Julian Rademeyer

"On the black markets of Southeast Asia, rhino horn is worth more than gold, cocaine and heroin. This is the chilling story of a two-year-long investigation into a dangerous criminal underworld and the merciless syndicates that will stop at nothing to obtain their prize. It is a tale of greed, folly and corruption, and of an increasingly desperate battle to save the rhino--which has survived for more than fifty million years--from extinction."--P. [4] of cover.

Human emotion and animal instinct meet poignantly when two six-week-old leopard cubs become the charge of 22-year-old game ranger Graham Cooke at Londolozli. Staying with the cubs in an unfenced bush camp surrounded by lions, hyenas and other leopards, he must first gain their trust before he begins to guide them towards release in the wild. It takes weeks of patience and gentleness for Graham to be accepted into the cubs' small family unit and to find ways of communicating with the young leopards as he slowly begins to introduce them to their new environment. Graham finds himself drawn more to the wary little female than her easy-going brother, but over time both cubs come to recognise him as their protector. They form a bond of friendship through which he can gain unparalleled insights into their development and behaviour. When, a year later, the cubs are relocated to the Zambian wilderness, Graham faces the hardest task of all: to set free the young animals he has become so devoted to so that they can return to a wild existence where he is unable to control their fate.

Documents the efforts of crusading lawyer Joel Renolds and marine biologist Ken Balcolm to expose a covert U.S. Navy sub detection system that caused whales to beach themselves, an effort that challenged Ken’s loyalties and pitted them against powerful military adversaries.

The threatened species categories used in Red Data Books and Red Lists have been in place for almost 30 years. The IUCN Red List Categories and Criteria provide an easily and widely understood system for classifying species at high risk of global extinction, so as to focus attention on conservation measures designed to protect them. This latest version of the classification system was adopted by the IUCN Council in February 2001 and reflects comments from the IUCN and SSC memberships and the final meeting of the Criteria Review Working Group.

Ivory, Horn and Blood

A True Story

An African Love Story

Love, Life and Elephants

Commemorative monuments, memorials and public statuary in post-apartheid South Africa

It's South Africa 1990. Two major events are about to happen: the release of Nelson Mandela and, more importantly, it's Spud Milton's first year at an elite boys only private school. Cursed with parents from well beyond the lunatic fringe, a senile granny, and a dormitory full of strange characters, Spud has his hands full trying to adapt to his new home. Surrounded by names such as Gecko, Rambo, Rain Man and Mad Dog, Spud takes his first tentative steps along the path to manhood. (The path, it seems, could be a rather long road.) Armed with only his wits and his diary, Spud takes us from illegal night swimming to the red-hot furnace of the cricket pitch, from ghostbusting to a catastrophic family vacation. He also invites us into the mind of a boy struggling to come to terms with a strange new world; a boy whose eyes are being opened to love, friendship and complete insanity.

Daphne Sheldrick's best-selling love story of romance, life and elephants, An African Love Story: Love, Life and Elephants is an incredible story from Africa's greatest living conservationist. A typical day for Daphne involves rescuing baby elephants from poachers; finding homes for orphan elephants, all the while campaigning the ever-present threat of poaching for the ivory trade. An African Love Story is the incredible memoir of her life. It tells two stories - one is the extraordinary love story which blossomed when Daphne fell head over heels with Tsavo Game Park and its famous warden, David Sheldrick. The second is the love story of how Daphne and David, who devoted their lives to saving elephant orphans, at first losing every infant under the age of two until Daphne at last managed to devise the first-ever milk formula which would keep them alive. 'Compulsively readable', Mail on Sunday 'An enchanting memoir', Telegraph Daphne Sheldrick has spent her entire life in Kenya. For over 25 years, she and her husband, David, the famous founder of the the giant Tsavo National Park, raised and rehabilitated back into the wild orphans of misfortune from many different wild species. These included elephants, rhinos, buffaloes, zebra, eland, kudu, impala, warthogs and many other smaller animals. In 2006 she was made Dame Commander of the British Empire by the Queen.

In the spring of 1977 Frank Stilwell launched Vingila, 17 tons of welded together 11-millimetre steel plates, in Durban harbour. An electrician by trade, Frank's experience of sailing amounted to not very much - an unpleasant spell on a Scottish fishing trawler as a young man and a brief holiday on someone else's yacht off the coast of Mozambique a couple of years before. Never one to be daunted by a challenge or to be resisted in any way, he took his nine year old twins, Robert and Nicky, out of school, persuaded his wife Maureen that they would all learn how to sail and cope with life on the open seas as they went, and prepared to follow his dream of circumnavigating the world. Facing real danger from the elements and at first having to live more by their wits than their skills, the Stilwell family set off boldly, determined to become part of a community of sailors and adventurers who spend more time on the ocean than they do on dry land. In this unique coming of age memoir Martinique Stilwell's recounting of her true life gypsy childhood is poignant and funny and heartbreaking all at the same time. With the wisdom and innocence of a child's point of view, it is a powerful yet tender story of physical and emotional adversity, of family dysfunction and the ties that bind, and of the shackles and exhilarating freedom of growing up different.

What awaits us in the 2020s and 2030s? Will the country continue down the path of state capture, corrupt leadership and economic downturn? Or can South Africa rise from Jacob Zuma's lost decade? Frans Cronje analyses where we are, predicts where we are headed, and warns that there is not much time left to prepare for our future.

The Crime that Shook South Africa

An Action Plan for Their Conservation

African Rhino

*An intrepid investigation of the criminal world of wildlife trafficking--the poachers, the traders, and the customers--and of those fighting against it Journalist Rachel Nuwer plunges the reader into the underground of global wildlife trafficking, a topic she has been investigating for nearly a decade. Our insatiable demand for animals--for jewelry, pets, medicine, meat, trophies, and fur--is driving a worldwide poaching epidemic, threatening the continued existence of countless species. Illegal wildlife trade now ranks among the largest contraband industries in the world, yet compared to drug, arms, or human trafficking, the wildlife crisis has received scant attention and support, leaving it up to passionate individuals fighting on the ground to try to ensure that elephants, tigers, rhinos, and more are still around for future generations. As Reefer Madness (Schlosser) took us into the drug market, or Susan Orlean descended into the swampy obsessions of The Orchid Thief, Nuwer--an award-winning science journalist with a background in ecology--takes readers on a narrative journey to the front lines of the trade: to killing fields in Africa, traditional medicine black markets in China, and wild meat restaurants in Vietnam. Through exhaustive first-hand reporting that took her to ten countries, Nuwer explores the forces currently driving demand for animals and their parts; the toll that demand is extracting on species across the planet; and the conservationists, rangers, and activists who believe it is not too late to stop the impending extinctions. More than a depressing list of statistics, Poached is the story of the people who believe this is a battle that can be won, that our animals are not beyond salvation.*

*The journey to motherhood is sometimes clouded with unrealistic expectations and society's unfair judgement of any woman who isn't immediately blissfully happy with her new baby. Giving birth is a major life adjustment and rite of passage for all mothers. This book is for anyone who is struggling or has struggled on that journey, who may be grappling with confusion, anxiety, fear or anger. It offers hope, support and comfort and a clear path out of what may feel like a bewildering or overwhelming situation. Postnatal depression affects around 30 per cent of mothers, but partners, children, extended family, friends and colleagues all feel its ripple effect, and many mothers do not know, or do not wish to acknowledge, that this misunderstood illness can be treated just like any other. Written by a medical doctor, a clinical psychologist and their patient, a writer, each author contributes her own personal experience and expertise in the area of postnatal depression to an open and enlightening discussion of just what this illness is, how to recognise it and ways to achieve recovery of body, mind and spirit. They call on health care professionals and society at large to respond thoughtously, knowledgeably and with empathy to what is, for many mothers, a medical emergency. Women from different walks of life agreed to share with the authors, and now with the reader, their tough yet transformational experiences of postnatal depression, offering hope and encouragement and revealing the power of healing through openness and the telling of their stories.*

*This study treats ecotourism in National Protected Areas of Lao PDR as a "recreational frontier" which instrumentalizes the recreation of human natures in capitalism's centers for that of nonhuman natures at capitalism's (closing) frontiers. This world-ecological practice of ecorational instrumentality - i.e. of nature domination in the name of "Nature" - presents a remedy for capitalism's crisis that is itself crisis-ridden, enacting a central tension of ecocapitalism: that between "conservation" and "development". This epistemic-institutional tension is traced through the preconditions, modes and effects of ecotourism in Laos by gradually zooming from the most general scale of societal nature relations into the most detailed intricacies of ecotouristic practice. The combination of Bourdieu, Marx and Critical Theory enables a systematic analysis of the recreational frontier as enactment of various contradictions deriving from the "false-and-real" Nature/Society dualism.*

*The remarkable story of Grant Fowlds, who has dedicated his life to saving the imperiled rhinos, vividly told with Graham Spence, co-author of the bestselling The Elephant Whisperer. What would drive a man to 'smuggle' rhino horn back into Africa at great risk to himself? This is just one of the situations Fowlds has put himself in as part of his ongoing fight against poaching, in order to prove a link between southern Africa and the illicit, lucrative trade in rhino horn in Vietnam. Shavings of rhino horn are sold as a snake-oil "cures," but a rhino's horn has no magical, medicinal properties whatsoever. Yet it is for this that rhinoceroses are being killed at an escalating rate that puts the survival of the species in jeopardy. This corrupt, illegal war on wildlife has brought an iconic animal to the brink of extinction. Growing up on a farm in the eastern Cape of South Africa, Grant developed a deep love of nature, turning his back on hunting to focus on saving wildlife of all kinds and the environment that sustains both them and us. He is a passionate conservationist who puts himself on the front line of protecting rhinos in the wild—right now, against armed poachers—and in the long term, through his work with schoolchildren, communities, and policymakers.*

*“If you’ve been looking for something different to take up your health, fitness, and personal growth, this is it.”—Melissa Urban, Whole30 CEO and New York Times bestselling author Discover the evolutionary mind and body benefits of living at the edges of your comfort zone and reconnecting with the wild. In many ways, we’re more comfortable than ever before. But could our sheltered, temperature-controlled, overfed, underchallenged lives actually be the leading cause of many of our most urgent physical and mental health issues? In this gripping investigation, award-winning journalist Michael Easter seeks out off-the-grid visionaries, disruptive genius researchers, and mind-body conditioning trailblazers who are unlocking the life-enhancing secrets of a counterintuitive solution: discomfort. Easter’s journey to understand our evolutionary need to be challenged takes him to meet the NBA’s top exercise scientist, who uses an ancient Japanese practice to build championship athletes; to the mystical country of Bhutan, where an Oxford economist and Buddhist leader are showing the world what death can teach us about happiness; to the outdoor lab of a young neuroscientist who’s found that nature tests our physical and mental endurance in ways that expand creativity while taming burnout and anxiety; to the remote Alaskan backcountry on a demanding thirty-three-day hunting expedition to experience the rewilding secrets of one of the last rugged places on Earth; and more. Along the way, Easter uncovers a blueprint for leveraging the power of discomfort that will dramatically improve our health and happiness, and perhaps even help us understand what it means to be human. The Comfort Crisis is a bold call to break out of your comfort zone and explore the wild within yourself.*

*Cheetahs: Biology and Conservation reports on the science and conservation of the cheetah. This volume demonstrates the interdisciplinary nature of research and conservation efforts to study and protect the cheetah. The book begins with chapters on the evolution, genetics, physiology, ecology and behavior of the species, as well as distribution reports from range countries. These introductory chapters lead into discussions of the challenges facing cheetah survival, including habitat loss, declining prey base, human-wildlife conflict, illegal trade, and newly-emerging threats, notably climate change. This book also focuses on conservation strategies and solutions, including environmental education and alternative livelihoods. Chapters on the role of captive cheetahs to conservation and the long-term research of the species are included, as are a brief discussion of the methods and analyses used to study the cheetah. The book concludes with the conservation status and future outlook of the species. Cheetahs: Biology and Conservation is a valuable resource for the regional and global communities of cheetah conservationists, researchers, and academics. Although cheetah focussed the book provides information relevant to the study of broader topics such as wildlife conservation, captive breeding, habitat management, conservation biology and animal behaviour. Cover photograph by Angela Scott Includes chapters by the world’s leading cheetah researchers and practitioners, who have focused their efforts on this high-profile species of conservation concern Provides findings as a combination of scientific detail and basic explanations so that they can be available not only to cheetah researchers and conservationists, but also to policy makers, business leaders, zoo managers, academics, students, and people interested in the cheetah and its future Presents the current knowledge of the species, helping lay the foundations and best practices for cheetah conservation and research worldwide Additional protocols and forms (which were provided by authors) can be found at the Cheetahs: Biology and Conservation companion site: https://www.elsevier.com/books-and-journals/book-companion/9780128040881 This edited volume examines the use of militarised responses to different forms of criminal activity, discussing the outcomes and unintended consequences. Politicians and policymakers frequently use militarised responses to look tough on crime. The deployment of armies, navies, military assets and militarised approaches can send a powerful message, but have produced mixed results. While they generate the perception that governments are actively engaged on issues of concern to the public, and in some cases have resulted in notable successes, on the downside they have frequently also increased the loss of life, exacerbated the humanitarian consequences of a particular crime and entrenched divides between security and state institutions and the criminal proponents, narrowing the possibilities for future negotiated solutions. By focusing on four different areas of criminality - wildlife crime, piracy, migration and drug trafficking - the book allows context and evidence-based conclusions to be drawn on the strategic value and commonality of responses and their outcomes.*

*In this book, renowned anthropologists Jean and John L. Comaroff make a startling but absolutely convincing claim about our modern era: it is not by our arts, our politics, or our science that we understand ourselves—it is by our crimes. Surveying an astonishing range of forms of crime and policing—from petty thefts to the multibillion-dollar scams of too-big-to-fail financial institutions to the collateral damage of war—they take readers into the disorder of the late modern world. Looking at recent transformations in the triangulation of capital, the state, and governance that have led to an era where crime and policing are ever more complicit, they offer a powerful meditation on the new forms of sovereignty, citizenship, class, race, law, and political economy of representation that have arisen. To do so, the Comaroffs draw on their vast knowledge of South Africa, especially, and its struggle to build a democracy founded on the rule of law out of the wreckage of long years of violence and oppression. There they explore everything from the fascination with the supernatural in policing to the extreme measures people take to prevent home invasion, drawing illuminating comparisons to the United States and United Kingdom. Going beyond South Africa, they offer a global criminal anthropology that attests to criminality as the constitutive fact of contemporary life, the vernacular by which politics are conducted, moral panics voiced, and populations ruled. The result is a disturbing but necessary portrait of the modern era, one that asks critical new questions about how we see ourselves, how we think about morality, and how we are going to proceed as a global society.*

Militarised Responses to Transnational Organised Crime

The Beautiful Screaming Of Pigs

Thinking up a Hurricane

Call Me by Your Name

In parts of Korea and China, moon bears, black but for the crescent-shaped patch of white on their chests, are captured in the wild and brought to "bear farms" where they are imprisoned in squeeze cages, and a steel catheter is inserted into their gall bladders. The dripping bile is collected as a cure for ailments ranging from an upset stomach to skin burns. The bear may live as long as fifteen years in this state. Rhinos are being illegally poached for their horns, as are tigers for their bones, thought to improve virility. Booming economies and growing wealth in parts of Asia are increasing demand for these precious medicinals. Already endangered species are being sacrificed for temporary treatments for nausea and erectile dysfunction. Richard Ellis, one of the world's foremost experts in wildlife extinction, brings his alarm to the pages of Tiger Bone & Rhino Horn, in the hope that through an exposure of this drug trade, something can be done to save the animals most direly threatened. Trade in animal parts for traditional Chinese medicine is a leading cause of species endangerment in Asia, and poaching is increasing at an alarming rate. Most of traditional Chinese medicine relies on herbs and other plants, and is not a cause for concern. Ellis illuminates those aspects of traditional medicine, but as wildlife habitats are shrinking for the hunted large species, the situation is becoming ever more critical. One hundred years ago, there were probably 100,000 tigers in India, South China, Sumatra, Bali, Java, and the Russian Far East. The South Chinese, Caspian, Balinese, and Javan species are extinct. There are now fewer than 5,000 tigers in all of India, and the numbers are dropping fast. There are five species of rhinoceros--three in Asia and two in Africa--and all have been hunted to near extinction so their horns can be ground into powder, not for aphrodisiacs, as commonly thought, but for ailments ranging from arthritis to depression. In 1930, there were 80,000 black rhinos in Africa. Now there are fewer than 2,500. Tigers, bears, and rhinos are not the only animals pursued for the sake of alleviating human ills--the list includes musk deer, sharks, saiga antelope, seahorses, porcupines, monkeys, beavers, and sea lions--but the dwindling numbers of those rare species call us to attention. Ellis tells us what has been done successfully, and contemplates what can and must be done to save these animals or, sadly, our children will witness the extinction of tigers, rhinos, and moon bears in their lifetime.

The story of a ‘rogue unit’ operating within the South African Revenue Service (SARS) became entrenched in the public mind following a succession of sensational reports published by the Sunday Times in 2014. The unit, the reports claimed, had carried out a series of illegal spook operations: they had spied on President Jacob Zuma, run a brothel, illegally bought spyware and entered into unlawful tax settlements. In a plot of Machiavellian proportions, head of the elite crime-busting unit Johann van Loggerenberg and many of SARS’s top management were forced to resign. Van Loggerenberg’s select team of investigators, with their impeccable track record of busting high-level financial fraudsters and nailing tax criminals, lost not only their careers but also their reputations. Now, in this extraordinary account, they finally get to put the record straight and the rumours to rest: there was no ‘rogue unit’. The public had been deceived, seemingly by powers conspiring to capture SARS for their own ends. Shooting down the allegations he has faced one by one, Van Loggerenberg tells the story of what really happened inside SARS, revealing details of some of the unit’s actual investigations.

A Novel

A terrifying true story of greed, corruption, depravity and ruthless criminal enterprise ... On the black markets of Southeast Asia, rhino horn is worth more than gold, cocaine and heroin. This is the chilling story of a more than two-year-long investigation into a dangerous criminal underworld where merciless syndicates will stop at nothing to attain their prize. It is a tale of greed, folly and corruption, and of an increasingly desperate battle to save the rhino – which has survived for more than 50 million years – from extinction. Killing for Profit is a meticulous, devastating and revelatory account of one of the world ’ s most secretive trades. It exposes poachers, gangsters, con men, mercenaries, killers, gunrunners, diplomats, government officials and other key players behind the slaughter. And it follows the bloody trail from the front lines of the rhino wars in South Africa, Zimbabwe and Mozambique to the medicine markets of Vietnam and the lair of a wildlife-trafficking kingpin on the banks of the Mekong River in Laos ...

In the last decade over 6,000 rhinos have been killed in South Africa. Relentless poaching for their horns has led to a catastrophic fall in black rhino numbers. Meanwhile a corrupt South African government turns a blind eye to the international trade in rhino horn. This is the background to Peter Hain ’ s brilliantly paced and timely thriller. Battling to defend the dwindling rhino population, a veteran freedom fighter is forced to break his lifetime loyalty to the ANC as he confronts corruption at the very highest level. The stakes are high. Can the country ’ s ancient rhino herd be saved from extinction by state-sponsored poaching? Has Mandela ’ s ’ rainbow nation ’ been irretrievably betrayed by political corruption and cronyism?

Young Harry Moto has problems with fallen arches, crinkly hair that won’t flatten down, a plump chest and, for a white man, unusually dark skin. Harry’s appearance provokes mercilessly sarcastic taunting from his school mates but, living in South Africa, it is not surprising that it is his skin colour which eventually brings about his downfall...

This book critically investigates the flourishing monument phenomenon in post-apartheid South Africa, notably the political discourses that fuel it; its impact on identity formation, its potential benefits, and most importantly its ambivalences and contradictions.

Project Coast

The Life and Times of a Forensic Scientist

*"The aggressive poaching of rhinos needs to be countered with equal aggression. So argued Prince Bernhard of the Netherlands, the founder president of the World Wide Fund for Nature (WWF), at a 1987 meeting with John Hanks, conservation expert and WWF's head in Africa. The result was Operation Lock, a secret initiative funded by Prince Bernhard and staffed by former SAS operatives. Operation Lock set up headquarters in Johannesburg and extended its reach into neighbouring states: Namibia, Zambia, Botswana, Swaziland and Mozambique. Its operatives planned to train game rangers, to pose as rhino horn traders in order to entrap buyers, and to expose the kingpins who were driving the trade. It was a controversial approach, all the more because it was working within apartheid South Africa in the late 1980s. When the existence of the project was finally leaked, WWF denied any involvement, and John Hanks took the fall. In Operation Lock and the War on Rhino Poaching, John Hanks finally tells the story of these explosive events from 25 years ago. As a leading international authority on conservation, he also deals with the scourge of rhino poaching up to the present, and gives powerful and controversial criticism of some of the current policies to curb poaching."* -- Back cover.

*This important book investigates the environmental legal frameworks, court structures and relevant jurisprudence of nineteen countries, representing legal systems and legal cultures from a diverse array of countries situated across the globe. In doing so, it distils comparative trends, new developments, and best practices in adjudication endeavours, highlighting the benefits and shortcomings of the judicial approach to environmental governance.*

*"Wildlife trafficking threatens the existence of many plant and animal species and accelerates the destruction of wildlife, forests, and other natural resources. It contributes to environmental degradation, destroys unique natural habitats, and deprives many countries and their populations of scarce renewable resources. Nevertheless, preventing and suppressing the illegal trade in wildlife, animal parts, and plants is presently not a priority in many countries and it remains overlooked and poorly researched. The chapters included in this volume address causes, characteristics, and actors of wildlife trafficking, analyse detection methods, and explore different international and national legal frameworks."* *This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. All rights not granted by the work's license are retained by the author or authors.*

*The black and the white rhinoceros have become flagship species for international conservation. They are significant not only for the continuation of a major evolutionary heritage, but also as symbols for the protection of African savannahs. The battle for the survival of these species has been marked by some notable successes and sadly, many failures, and the situation is still critical. The international horn trade ban and the domestic bans imposed in most traditional user states have driven the trade further underground, in some cases inflating prices and making illegal dealing even more lucrative.This Plan is aimed at donors, government and non-government organizations, and all those involved in rhino conservation. It outlines the actions and strategies needed to catalyse support for these majestic animals, and help secure their future in sub-Saharan Africa. The overall conclusion is that, given the political will, stability and adequate field expenditure, rhinos can be conserved in the wild.*

This impressive collection of original essays explores the relationship between social conflict and the environment - a topic that has received little attention within criminology. The chapters provide a systematic and comprehensive introduction and overview of conflict situations stemming from human exploitation of environments, as well as the impact of social conflicts on the wellbeing and health of specific species and ecosystems. Largely informed by green criminology perspectives, the chapters in the book are intended to stimulate new understandings of the relationships between humans and nature through critical evaluation of environmental destruction and degradation associated with social conflicts occurring around the world.

With a goal of creating a typology of environment-social conflict relationships useful for green criminological research, this study is essential reading for scholars and academics in criminology, as well as those interested in crime, law and justice.

In April 2019 Lord Ashcroft published the results of his year-long investigation into South Africa ’ s captive-bred lion industry. Over eleven pages of a single edition of the Mail on Sunday he showed why this sickening trade, which involves appalling cruelty to the ’ King of the Savannah ’ from birth to death, has become a stain on the country. Unfair Game, to be published in June 2020, features the shocking results of a new inquiry Lord Ashcroft has conducted into South Africa ’ s lion business. In the book, he shows how tourists are unwittingly being used to support the abuse of lions; he details how lions are being tranquilised and then hunted in enclosed spaces; he urges the British government to ban the import of captive-bred lion trophies; and he demonstrates why Asia ’ s insatiable appetite for lion bones has become a multimillion-dollar business linked to criminality and corruption, which now underpins South Africa’s captive lion industry.

I was back in a hospital bed, with a doctor sitting beside me. 'Try to describe how you feel,' he said. 'I feel dislocated,' I told him. 'Not part of life.' 'Whose life?' 'Mine. Everybody's. Life.' And the familiar sensation started up in my belly, the shaking spread into my arms. I covered my face with my hands, but I couldn't block out what I saw.' A year ago Patrick Winter, a young South African, was sent to Namibia to complete his military service and to defend his country against 'terrorism'. Now he is back, to meet Godfrey, his mother's freedom fighter boyfriend, and to witness the country's first free elections. But Patrick needs to confront and process much more than a country in transition, and in doing so he is forced to revisit his past and to face the pain and the demons that haunt him.

Project Coast was the codename for a covert programme, established by the South African apartheid government in 1981, to develop a range of chemical and biological agents intended for use against opponents of the regime within and outside the state. This book examines the history of the project, its operation outside ordinary political, military and financial controls, through to its eventual demise in 1995. It draws on information made public at the Truth and Reconciliation Commission hearings, as well as evidence presented at the criminal trial of Dr Wouter Basson, the project's director.

The Last Rhinos

An exposé of South Africa’s captive-bred lion industry

Contemporary and Emerging Issues

Another extraordinary story of life on a South African game reserve from the authors of **The Elephant Whisperer**. Lawrence Anthony's South African game reserve is home to many animals he has saved, from a remarkable herd of elephants to a badly behaved bushbaby called George. Described as "the Indiana Jones of conservation", when one of his rhinos was brutally slaughtered for her horn, he didn't hesitate to lead an armed response against the poachers. Then he learned that there were only a handful of northern white rhinos left in the wild, living in an area of the Congo controlled by the infamous Lord's Resistance Army and soon to be hunted into extinction. Lawrence knew he had to take action. What followed was an extraordinary adventure, as he headed into the jungle to negotiate with the rebels, while battling to save his own animals from terrible drought and to save the eyesight of his beloved elephant matriarch Nana. **The Last Rhinos** is peopled with unforgettable characters, both human and animal, and is a sometimes funny, sometimes moving, always exciting read.

An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.

**Bloody crimes of passion, political assassinations, sinister poisonings, investment fraud and mass mining disasters ... Dr David Klatzow has seen it all. During his extraordinary twenty-six-year career as South Africa’s foremost independent forensic scientist, he has investigated countless high-profile and notorious cases. Steeped in Blood provides gripping accounts of dozens of these matters, including the infamous deaths of Brett Kebble and Inge Lotz, the Helderberg aeroplane crash and the frustrating investigations of the brutal apartheid years. From the Gugulethu Seven and Trojan Horse massacres to the assassination of David Webster, Klatzow’s investigations reveal his fierce determination to unveil the truth in spite of overwhelming state obstructions, police bungling and cover-ups. Unfazed by controversy and unwilling to accept no for an answer, Klatzow’s tenacity, fearlessness and forensic know-how are used to brilliant effect in these fascinating cases. This book exposes a demanding and sinister world where the rewards are equalled only by the frustrations, and where the truth is always elusive. But the truth is out there, and David Klatzow will find it.**

**Describes the illegal trafficking of elephant ivory and rhinoceros horns and the implications for these endangered animals.**

New edition includes the sentencing and identifies Don Steenkamp as the murderer for the first time ... Just after dusk on Good Friday, 6 April 2012, the peace and quiet permeating the small Northern Cape town of Griekwastad was disrupted when a young teenage boy sped into town in his father’s Isuzu bakkie and screeched to a halt in front of the town’s nearly deserted police station to announce that his parents and sister had been brutally shot and killed on the family farm, Naauwoek Based on interviews with all the role-players, including the investigating officers on the case, the forensic and ballistic experts, and family and friends of the deceased, this is the riveting account of what really happened on Naauwoek farm on that fateful day, as told by the reporter who first broke the story ...

The development of international wildlife law has been one of the most significant exercises in international law-making during the last fifty years. This second edition of Lyster's International Wildlife Law coincides with both the UN Year of Biological Diversity and the twenty-fifth anniversary of Simon Lyster's first edition. The risk of wildlife depletion and species extinction has become even greater since the 1980s. This new edition provides a clear and authoritative analysis of the key treaties which regulate the conservation of wildlife and habitat protection, and of the mechanisms available to make them work. The original text has also been significantly expanded to include analysis of the philosophical and welfare considerations underpinning wildlife protection, the cross-cutting themes of wildlife and trade, and the impact of climate change and other anthropogenic interferences with species and habitat. Lyster's

International Wildlife Law is an indispensable reference work for scholars, practitioners and policy-makers alike.
