Named a Best History Book of 2019 by The Times (UK) The astounding true story of how thousands of ordinary Germans, overcome by shame, guilt, and fear, killed themselves after the fall of the Third Reich and the end of World War II. By the end of April 1945 in Germany, the Third Reich had fallen and invasion was underway. As the Red Army advanced, horrifying stories spread about the depravity of its soldiers. For many German people, there seemed to be nothing left but disgrace and despair. For tens of thousands of them, the only option was to choose death – for themselves and for their children. "Promise Me You'll Shoot Yourself" recounts this little-known mass event. Using diaries, letters, and memoirs, historian Florian Huber traces the euphoria of many ordinary Germans as Hitler restored national pride, their indifference as the Führer's political enemies, Jews, and other minorities began to suffer, and the descent into despair as the war took its terrible toll, especially after the invasion of the Soviet Union. Above all, he investigates how suicide became a contagious epidemic as the country collapsed. Drawing on eyewitness accounts and other primary sources, "Promise Me You'll Shoot Yourself" presents a riveting portrait of a nation in crisis, and sheds light on a dramatic yet largely unknown episode of postwar Germany.

This book is a captivating account of a professional mathematician's experiences conducting a math circle for preschoolers in his apartment in Moscow in the 1980s. As anyone who has taught or raised young children knows, mathematical education for little kids is a real mystery. What are they capable of? What should they learn first? How hard should they work? Should they even "work" at all? Should we push them, or just let them be? There are no correct answers to these questions, and the author deals with them in classic math-circle style: he doesn't ask and then answer a question, but shows us a problem--be it mathematical or pedagogical--and describes to us what happened. His book is a narrative about what he did, what he tried, what worked, what failed, but most important, what the kids experienced. This book does not purport to show you how to create precocious high achievers. It is just one person's story about things he tried with a half-dozen young children. Mathematicians, psychologists, educators, parents, and everybody interested in the intellectual development in young children will find this book to be an invaluable, inspiring resource. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession. Titles in this series are co-published with the Mathematical Sciences Research Institute (MSRI).

Get Better Results with high quality content, exercise sets, and step-by-step pedagogy! Tyler Wallace continues to offer an enlightened approach grounded in the fundamentals of classroom experience in Beginning and Intermediate Algebra. The text reflects the compassion and insight of its experienced author with features developed to address the specific needs of developmental level students. Throughout the text, the author communicates to students the very points their instructors are likely to make during lecture, and this helps to reinforce the concepts and provide instruction that leads students to mastery and success. The exercises, along with the number of practice problems and group activities available, permit instructors to choose from a wealth of problems, allowing ample opportunity for students to practice what they learn in lecture to hone their skills. In this way, the book perfectly complements any learning platform, whether traditional lecture or distance-learning; its instruction is so reflective of what comes from lecture, that students will feel as comfortable outside of class as they do inside class with their instructor.

For children who can already read and write the 26 letters of the alphabet. Words that are familiar to children - such as bat, hat and rat - are grouped together by the vowel and consonant combination of the last two letters. By repeatedly saying and tracing words, children easily acquire solid abilities to say and write simple words.

The Answer, a compelling tale, unfolds as eight friends discover they all have recently encountered an unusual elderly gentleman. Mysteriously and inexplicably, this kindly stranger appears to them in different settings around the world. On each occasion, he delivers the same message, urging each of them to come to the aid of a place he simply calls the Island. While sharing their odd encounters, the friends become confident in the reality of their experiences and in the important truth of their visitors messages. As they deliberate making commitments to a yet-to-be-revealed vital mission, the amiable gentleman joins their conversations, facilitating greater camaraderie while also expanding the friends consciousness of dimensions beyond their own. His mere presence is evidence that more exists than previously known. Like other books presented by Claudia, The Answer features characters whose gentleness, goodness, and mutual respect embody an enviable way of being.

The extremely potent substance botulinum neurotoxin (BoNT) has attracted much interest in diverse fields. Originally identified as cause for the rare but deadly disease botulism, military and terrorist intended to misuse this sophisticated molecule as biological weapon. This caused its classification as select agent category A by the Centers for Diseases Control and Prevention and the listing in the Biological and Toxin Weapons Convention. Later, the civilian use of BoNT as long acting peripheral muscle relaxant has turned this molecule into an indispensable pharmaceutical world wide with annual revenues >\$1.5 billion. Also basic scientists value the botulinum neurotoxin as molecular tool for dissecting mechanisms of exocytosis. This book will cover the most recent molecular details of botulinum neurotoxin, its mechanism of action as well as its detection and application.

In all parts of Asia, households devote considerable expenditures to private supplementary tutoring. This tutoring may contribute to students' achievement, but it also maintains and exacerbates social inequalities, diverts resources from other uses, and can contribute to inefficiencies in education systems. Such tutoring is widely called shadow education, because it mimics school systems. As the curriculum in the school system changes, so does the shadow. This study documents the scale and nature of shadow education in different parts of the region. Shadow education has been a major phenomenon in East Asia and it has far-reaching economic and social implications.

The idea of the ICM Study 13 is outlined as follows: Education in any social environment is influenced in many ways by the traditions of these environments. This study brings together leading experts to research and report on mathematics education in a global context. Mathematics education faces a split phenomenon of difference and correspondence. A study attempting a comparison between mathematics education in different traditions will be helpful to understanding this phenomenon.

A surprisingly simple way for students to master any subject--based on one of the world's most popular online courses and the bestselling book A Mind for Numbers A Mind for Numbers and its wildly popular online companion course "Learning How to Learn" have empowered more than two million learners of all ages from around the world to master subjects that they once struggled with. Fans often wish they'd discovered these learning strategies earlier and ask how they can help their kids master these skills as well. Now in this new book for kids and teens, the authors reveal how to make the most of time spent studying. We all have the tools to learn what might not seem to come naturally to us at first--the secret is to understand how the brain works so we can unlock its power. This book explains: • Why sometimes letting your mind wander is an important part of the learning process • How to avoid "rut think" in order to think outside the box • Why having a poor memory can be a good thing • The value of metaphors in developing understanding • A simple, yet powerful, way to stop procrastinating Filled with illustrations, application questions, and exercises, this book makes learning easy and fun.

Skill Builders are great tools for keeping children current during the school year or preparing them for the next grade level. A variety of fun and challenging activities provides students with practice and helps introduce basic skills to new learners. This full-color workbook contains appropriate passages and exercises based on national standards for sixth through eighth grade to help ensure that children master geometry math skills before progressing. Skill Builders combines entertaining and interactive activities with eye-catching graphics to make learning and reviewing fun and effective. The compact 6" x 9" size makes this book perfect for school, at home, or on the go. It features 80 perforated, reproducible pages and an answer key.

This book focuses on the usage and application of plant- and animal-based food products with significant functional properties and health benefits as well as their development into processed food. Many chapters in this book contain overviews on superfood and functional food from South America. Details on the functional properties of apiculture products are also included herein. Additionally, an area that is not widely discussed in academia - pet food with functional properties - is also covered. It is hoped that this book will serve as a source of knowledge and information to make better choices in food consumption and alterations to dietary patterns. It is also recommended for readers to take a look at a related book, Superfood and Functional Food - The Development of Superfoods and Their Roles as Medicine. Teach basic math skills like negative numbers, percentages, and decimals using word problems! Your students' reading skills will be strengthened as they learn basic math operations and critical thinking skills.The word problems included in this book are interesting enough to hold student attention, yet challenging enough to strengthen math skills. This book is designed to be completed by the student with little or no help from a parent or teacher which makes it a great resource for use at home or school.

The Instructional Design Knowledge Base: Theory, Research and Practice provides ID professionals and students at all levels with a comprehensive exploration of the theories and research that serve as a foundation for current and emerging ID practice. This book offers both current and classic interpretations of theory from a range of disciplines and approaches. It encompasses general systems, communication, learning, early instructional, media, conditions-based, constructivist design and performance-improvement theories. Features include: rich representations of the ID literature concise theory summaries specific examples of how theory is applied to practice recommendations for future research a glossary of related terms a comprehensive list of references. A perfect resource for instructional design and technology doctoral, masters and educational specialist certificate programs, The Instructional Design Knowledge Base provides students and scholars with a comprehensive background for ID practice and a foundation for future ID thinking.

"Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.

The Dyslexia Debate

"Unsettled is a remarkable book—probably the best book on climate change for the intelligent layperson—that achieves the feat of conveying complex information clearly and in depth." —Claremont Review of Books "Surging sea levels are inundating the coasts." "Hurricanes and tornadoes are becoming fiercer and more frequent." "Climate change will be an economic disaster." You've heard all this presented as fact. But according to science, all of these statements are profoundly misleading. When it comes to climate change, the media, politicians, and other prominent voices have declared that "the science is settled." In reality, the long game of telephone from research to reports to the popular media is corrupted by misunderstanding and misinformation. Core questions—about the way the climate is responding to our influence, and what the impacts will be—remain largely unanswered. The climate is changing, but the why and how aren't as clear as you've probably been led to believe. Now, one of America's most distinguished scientists is clearing away the fog to explain what science really says (and doesn't say) about our changing climate. In Unsettled: What Climate Science Tells Us, What It Doesn't, and Why It Matters, Steven Koonin draws upon his decades of experience—including as a top science advisor to the Obama administration—to provide up-to-date insights and expert perspective free from political agendas. Fascinating, clear-headed, and full of surprises, this book gives readers the tools to both understand the climate issue and be savvy consumers of science media in general. Koonin takes readers behind the headlines to the more nuanced science itself, showing us where it comes from and guiding us through the implications of the evidence. He dispels popular myths and unveils little-known truths; despite a dramatic rise in greenhouse gas emissions, global temperatures actually decreased from 1940 to 1970. What's more, the models we use to predict the future aren't able to accurately describe the climate of the past, suggesting they are deeply flawed. Koonin also tackles society's response to a changing climate, using data-driven analysis to explain why many proposed "solutions" would be ineffective, and discussing how alternatives like adaptation and, if necessary, geoengineering will ensure humanity continues to prosper. Unsettled is a reality check buoyed by hope, offering the truth about climate science that you aren't getting elsewhere—what we know, what we don't, and what it all means for our future.

Communication skills can make a difference in whether people tell you the truth or not. Knowing when to ask the next question, the behaviors that signal when the whole story isn't being told, and what questions to ask can help you cut through deception and lying so you can have confidence in your communications. Based on the same methods used by law enforcement professionals, but appropriate for everyday interactions, these skills and techniques can be applied in almost every situation. Without threats or intimidation, Walters' strategies can improve relationships and communication by teaching how to spot a liar and, more importantly, how to get to the truth.--From publisher description.

A lot of people wonder how Chinese parents raise such stereotypically successful kids. They wonder what Chinese parents do to produce so many math whizzes and music prodigies, what it's like inside the family, and whether they could do it too. Well, I can tell them, because I've done it... Amy Chua's daughters, Sophia and Louisa (Lulu) were polite, interesting and helpful, they had perfect school marks and exceptional musical abilities. The Chinese-parenting model certainly seemed to produce results. But what happens when you do not tolerate disobedience and are confronted by a screaming child who would sooner freeze outside in the cold than be forced to play the piano? Battle Hymn of the Tiger Mother is a story about a mother, two daughters, and two dogs. It was supposed to be a story of how Chinese parents are better at raising kids than Western ones. But instead, it's about a bitter clash of cultures, a fleeting taste of glory, and how you can be humbled by a thirteen-year-old. Witty, entertaining and provocative, this is a unique and important book that will transform your perception of parenting forever.

Leadership is hard. How can you balance compassion for your people with effectiveness in getting the job done? A global pandemic, economic volatility, natural disasters, civil and political unrest. From New York to Barcelona to Hong Kong, it can feel as if the world as we know it is coming apart. Through it all, our human spirit is being tested. Now more than ever, it's imperative for leaders to demonstrate compassion. But in hard times like these, leaders need to make hard decisions--deliver negative feedback, make difficult choices that disappoint people, and in some cases lay people off. How do you do the hard things that come with the responsibility of leadership while remaining a good human being and bringing out the best in others? Most people think we have to make a binary choice between being a good human being and being a tough, effective leader. But this is a false dichotomy. Being human and doing what needs to be done are not mutually exclusive. In truth, doing hard things and making difficult decisions is often the most compassionate thing to do. As founder and CEO of Potential Project, Rasmus Hougaard and his longtime coauthor, Jacqueline Carter, show in this powerful, practical book, you must always balance caring for your people with leadership wisdom and effectiveness. Using data from thousands of leaders, employees, and companies in nearly a hundred countries, the authors find that when leaders bring the right balance of compassion and wisdom to the job, they foster much higher levels of employee engagement, performance, loyalty, and well-being in their people. With rich examples from Netflix, IKEA, Unilever, and many other global companies, as well as practical tools and advice for leaders and managers at any level, Compassionate Leadership is your indispensable guide to doing the hard work of leadership in a human way.

In this second edition of Natural Food Colorants two new chapters have been added and we have taken the opportunity to revise all the other chapters. Each of the original authors have brought up to date their individual contributions, involving in several cases an expansion to the text by the addition of new material. The new chapters are on the role of biotechnology in food colorant production and on safety in natural colorants, two areas which have undergone considerable change and development in the past five years. We have also persuaded the publishers to indulge in a display of colours by including illustrations of the majority of pigments of importance to the food industry. Finally we have rearranged the order of the chapters to reflect a more logical sequence. We hope this new edition will be greeted as enthusiastically as the first. It remains for us, as editors, to thank our contributors for undertaking the revisions with such thoroughness and to thank Blackie A&P for their support and considerable patience. G. A. F. R. J. D. New in this edition: REPENTANCE ON DEATH ROW. AN EXCLUSIVE INTERVIEW WITH SISTER GERARD, THE NUN WHO COUNSELLED THE TWO WOMEN ACCOMPLICES Singapore's most bizarre murder case drew to a close on 25 November 1988 when Adrian Lim, his wife Catherine Tan Mui Choo and mistress Hoe Kah Hong were hanged at Changi Prison. After two children were found dead within a fortnight in 1981, the Toa Payoh 'ritual killings' proved shocking for the revelations about self-styled spirit medium Adrian Lim's greed, depravity and cruelty. The confidence trickster persuaded numerous women that he possessed supernatural powers and they paid him with money, valuables and sex. He tortured his victims with primitive electric shock treatments that left one man dead. He was a monster who beat, slapped and kicked his women to make them fear and obey him as he acted out his every lustful perversion. He turned his wife into a prostitute and stripper. He made his

mistress lure the children to their deaths. Sentencing all three to hang, the trial judges said of Adrian Lim: "We are revolted by his abominable and depraved conduct."

Basic concepts of fluids and fluid flow are essential in all engineering disciplines to get better understanding of the courses in the professional programmes, and obviously its importance as a core subject need not be overemphasised.
