A doctor discovers the surprising truth about marijuana. No substance on earth is as hotly debated as marijuana. Opponents claim it's dangerous, addictive, carcinogenic, and a gateway to serious drug abuse. Fans claim it as a wonder drug, treating cancer, anorexia, AIDS, chronic pain, glaucoma, arthritis, migraines,

PTSD, and insomnia. Patients suffering from these conditions need—and deserve—hard facts based on medical evidence, not hysteria and superstition. In Stoned, palliative care physician Dr. David Casarett sets out to do anything—including experimenting on himself—to find evidence of marijuana’s medical potential. He smears mysterious marijuana paste on his legs and samples pot wine. He poses as a patient at a

seedy California clinic and takes lessons from an artisanal hash maker. In conversations with researchers, doctors, and patients around the world he learns how marijuana works—and doesn't—in the real world. Dr. Casarett unearths tales of near-miraculous success, such as a child with chronic seizures who finally found relief in cannabidiol oil. In Tel Aviv, he learns of a nursing home that's found success giving

- Why marijuana might be the best treatment option for some types of pain*
- Why there's no significant risk of lung damage from smoking pot*
- Why most marijuana-infused beer or wine won't get you*

Candy is more than a sugary snack. With candy, you can become a scientific detective. You can test candy for secret ingredients, peel the skin off candy corn, or float an “m” from M&M’s. You can spread candy dyes into rainbows, or pour rainbow layers of colored water. You’ll learn how to turn candy into crystals, sink marshmallows, float taffy, or send soda spouting skyward. You can even make your own lightning. Candy Experiments teaches kids a new use for their candy. As children try eye-

popping experiments, such as growing enormous gummy worms and turning cotton candy into slime, they'll also be learning science. Best of all, they'll willingly pour their candy down the drain. Candy Experiments contains 70 science experiments, 29 of which have never been previously published. Chapter themes include secret ingredients, blow it up, sink and float, squash it, and other fun experiments about color, density, and heat. The book is written for children between the ages of 7 and 10, though older and younger ages will

This book examines the history of formative assessment in the US and explores its potential for changing the landscape of teaching and learning to meet the needs of twenty-first century learners. The author uses case studies to illuminate the complexity of teaching and the externally imposed and internally constructed contextual elements that affect assessment decision-making. In this book, Box argues effectively for a renewed vision for teacher professional development that centers around the needs of students in a knowledge economy.

Finally, Box offers an overview of systemic changes that are needed in order for progressive teaching and relevant learning to take place.

Selected by The New York Times Book Review as a Notable Book of the Year A revelatory tale of science, adventure, and modern myth. When the writer Donovan Hohn heard of the mysterious loss of thousands of bath toys at sea, he figured he would interview a few oceanographers, talk to a few beachcombers, and read up on Arctic science and geography. But questions can be like ocean currents: wade in too far, and they carry you away.

Hohn's accidental odyssey pulls him into the secretive world of shipping conglomerates, the daring work of Arctic researchers, the lunatic risks of maverick sailors, and the shadowy world of Chinese toy factories. Moby-Duck is a journey into the heart of the sea and an adventure

through science, myth, the global economy, and some of the worst weather imaginable. With each new discovery, Hohn learns of another loose thread, and with each successive chase, he comes closer to understanding where his castaway quarry comes from and where it goes. In the grand tradition of Tony Horwitz and David Quammen, *Moby-Duck* is a compulsively readable narrative of whimsy and curiosity.

first Candy Experiments, this all-new collection presents more ways to destroy store-bought candy and learn some science in the process. Candy Experiments 2 delivers fun science facts from the perspective of a real mom in the kitchen doing crazy things with brand-name store-bought candy. Marshmallows, cotton candy, Pixy Stix, Jawbreakers, Pop Rocks, gummi candy, chocolate, and even soda provide good excuses to get destructive in the kitchen. Do Peeps dissolve when you drop them

into very hot water? Can you make gummi candy disappear in water? What happens to cotton candy when you dip it in oil? Candy Experiments 2 is full of new ideas for learning science through candy. Each experiment includes basic explanations of the relevant science. The book is written for children between the ages of 7 and 10, though older and younger ages will enjoy it as well.

You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments,

Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones.
