My aim in writing this book was to provide a guide to management for student occupational therapists and practitioners in the field. It is not intended to provide an answer to every conceivable management situation. The organization and delivery of health and social services is being subjected to relentless scrutiny and change. Hardly has one proposal been implemented before another one is introduced. In view of this, the thrust of this book is to highlight key points to be addressed when looking at the delivery of occupational therapy services. For this reason, the book starts from the viewpoint of one who is in the early stages of an occupational therapy career through to the position of having to manage the staff in an occupational therapy departmental service. Following this plan, the book has been organized into two parts. Part One covers issues that an occupational therapist has to confront directly in any job situation. In this situation, she will need to know wh at is expected of her. Apart from knowing about the various duties, it is necessary to understand the context in which the duties are to be conducted. Hence, there are chapters that discuss professional responsibilities, self-management, stan dards of practice, and the structure of the two biggest employers of occupational therapists – the NHS and local authority social services departments.

They then focus on specialized areas of occupational therapy assessment and intervention, including psychosocial and physical assessment and preventative programming.

"The text seeks to address the common functions, responsibilities and duties of occupational therapy leaders and managers. Many of these are in common with those faced by leaders and managers in other healthcare disciplines including nursing, physical therapy, social work, case management and others. The management functions most commonly identified include (a) planning, (b) organizing and staffing, (c) controlling, and (d) directing. There are sometimes variations because some authors may pull the function of "staffing" out from that of organizing and present five rather than four categories. Nonetheless, a discussion of leadership and the basic functions of management and their relationship to leading and managing evidence-based practice is a logical place to begin"--

Occupational Therapy and Stroke guides newly qualified occupational therapists (and those new to the field of stroke management) through the complexities of treating people following stroke. It encourages and assists therapists to use their skills in problem solving, building on techniques taught and observed as an undergraduate. Written and edited by practising occupational therapists, the book acknowledges the variety of techniques that may be used in stroke management and the scope of the occupational therapist's role. Chapters span such key topics as early intervention and the theoretical underpinnings of stroke care, as well as the management of motor, sensory, cognitive and perceptual deficits. They are written in a user-friendly style and presented in a form that enables the therapist to review the subject prior to assessment and treatment planning. Complex problems are grouped together for greater clarity. This second edition has been fully revised and updated in line with the WHO ICF model, National Clinical Guidelines and Occupational Therapy standards. It is produced on behalf of the College of Occupational Therapists Specialist Section - Neurological Practice.

The Framework, an official AOTA document, presents a summary of interrelated constructs that define and guide occupational therapy practice. The Framework was developed to articulate occupational therapy's contribution to promoting the health and participation of people, organizations, and populations through engagement in occupation. The revisions included in this second edition are intended to refine the document and include language and concepts relevant to current and emerging occupational therapy practice. Implicit within this summary are the profession's core beliefs in the positive relationship between occupation and health and its view of people as occupational beings. Numerous resource materials include a glossary, references and a bibliography, as well as a table of changes between the editions.
