The book covers Branwyn's coming of age in a commune, his involvement in the 90s zine publishing scene, his tenure at influential cyber arts and culture mags *Mondo 2000*, *boING boING*, *Wired*, and his eight years at *MAKE*, spearheading the growing maker movement. Previously published material is woven throughout with Branwyn's unabashedly honest commentary, personal anecdotes, and original essays. Early childhood mathematics is vitally important for young children's present and

future educational success. Research demonstrates that virtually all young children have the capability to learn and become competent in mathematics. Furthermore, young children enjoy their early informal experiences with mathematics. Unfortunately, many children's potential in mathematics is not fully realized, especially those children who are economically disadvantaged. This is due, in part, to a lack of opportunities to learn mathematics in early childhood settings or through everyday experiences in the home and in their communities. Improvements in early childhood mathematics education can provide young children with the foundation for school success. Relying on a comprehensive review of the research, *Mathematics Learning in Early Childhood* lays out the critical areas that should be the focus of young children's early mathematics education, explores the extent to which they are currently being incorporated in early childhood settings, and identifies the changes needed to improve the quality of mathematics experiences for young children. This book serves as a call to action to improve the state of early childhood mathematics. It will be especially useful for policy makers and practitioners—those who work directly with children and their families in shaping the policies that affect the education of young children. A concise history of Germans in Minnesota including immigration pattern, the Catholic and Lutheran churches, cultural organizations, business and politics especially in the World War 1 year. Minnesota is often associated with its Scandinavian heritage, but in fact Germans are the largest single immigrant group in Minnesota history and were the largest ancestry group in the 2000 census. Author Kathleen Neils Conzen tells the story of German Americans and their profound influence on Minnesota history and culture. Conzen recounts their triumphs and struggles over the last 150 years in a clear and concise narrative. Landing in poverty, Germans transformed acres of wilderness into productive farms and brought to America their love of art, music and sociability.

Immigrants came to America intent on creating in the words of one agent, "an earthly paradise of this Minnesota "and" a new Germany" soon rose in Stearns Country. Conzen explores not only the well known enclaves in Brown and Stearns Countries but also looks at

the smaller communities of Winona, on the Iron Range, and along the North Shore, as well as in the Twin Cities. In recent times, a renewed interest in German heritage can be seen in towns like New Ulm, home to the thirty-two-foot statue of Hermann the German, hero of the wars against the ancient Roman legions, and Heritagefest, the ethnic heritage festival that occurs every summer. Germans in Minnesota is the fifth book in The People of Minnesota, a new series dedicated to telling the history of the state through the stories of its ethnic groups in accessible and illustrated paperbacks. Future volumes include Chinese in Minnesota (due Fall 2003), Mexicans in Minnesota (due Spring 2004), Swedes in Minnesota (due Spring 2004), Poles in Minnesota (due Fall 2004), Ojibwe in Minnesota, Dakota in Minnesota, and Hmong in Minnesota.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the

expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. A visual panorama of unforgettable anecdotes and

factoids, A History of Video Games in 64 Objects is a treasure trove for gamers and pop culture fans. Let the gaming begin! The interdisciplinary field of the learning sciences encompasses educational psychology, cognitive science, computer science, and anthropology, among other disciplines. Using this book and a few simple computer programs, students can explore the properties of space by following an imaginary turtle across the screen. The concept of turtle geometry grew out of the Logo Group at MIT. because we're special. It's because we tried and failed, the same way you learn to ride a bike. We tried again and again, and now we have an idea how to get from point A to point B faster because of it." Three short years ago, when Chris Brogan and Julien Smith wrote their bestseller, Trust Agents, being interesting and human on the Web was enough to build a significant audience. But now, everybody has a platform. The problem is that most of them are just making noise. In The Impact Equation, Brogan and Smith show that to make people truly care about what you have to say, you need more than just a good idea, trust among your audience, or a certain number of followers. You need a potent mix of all of the above and more. Use the Impact Equation to figure out what you're doing right and wrong. Apply it to a blog, a tweet, a video, or a mainstream-media advertising campaign. Use it to explain why a feature in a national newspaper that reaches millions might have less impact than a blog post that reaches a thousand passionate subscribers. Consider the phenomenally successful British singer Adele. For most musicians, onstage banter basically consists of yelling "Hello, Cleveland!" But Adele connects with her audience, pausing

between songs to discuss a falling-out with her friends, or the drama of a break up. Each of these moments comes off as if she were talking directly with you, and you can easily relate. Adele has Impact. As the traditional channels for marketing, selling, and influencing disappear and more people interact mainly online, the very nature of attention is changing. The Impact Equation will give you the tools and metrics that guarantee your message will be heard.

*This manual provides information on the farming of *Macrobrachium rosenbergii*. Many of the techniques described are also applicable to other species of freshwater prawns that are being cultured. The manual is not a scientific text but is intended to be a practical guide to in-hatchery and on-farm management. The target audience is therefore principally farmers and extension workers. However, it is also hoped that, like the previous manual on this topic, it will be useful for lecturers and students alike in universities and other institutes that provide training in aquaculture.*

Would life be better without alcohol?

It's the nagging question more and more of us are finding harder to ignore, whether we have a "problem" with alcohol or not. After all, we yoga. We green juice. We meditate. We self-care. And yet, come the end of a long work day, the start of a weekend, an awkward social situation, we drink. One glass of wine turns into two turns into a bottle. In the face of how we care for ourselves otherwise, it's hard to avoid how alcohol really makes us feel... terrible. How different would our lives be if we stopped drinking on autopilot? If we stopped drinking altogether?
