

Leo Laportes Guide To Safe Computing

Provides information to diagnose and repair a variety of PC problems, including troubleshooting Windows, printers, multimedia devices, I/O ports, and Internet connections.

Rely on this practical, end-to-end guide on cyber safety and online security written expressly for a non-technical audience. You will have just what you need to protect yourself—step by step, without judgment, and with as little jargon as possible. Just how secure is your computer right now? You probably don't really know. Computers and the Internet have revolutionized the modern world, but if you're like most people, you have no clue how these things work and don't know the real threats. Protecting your computer is like defending a medieval castle. While moats, walls, drawbridges, and castle guards can be effective, you'd go broke trying to build something dragon-proof. This book is not about protecting yourself from a targeted attack by the NSA; it's about armoring yourself against common hackers and mass surveillance. There are dozens of no-brainer things we all should be doing to protect our computers and safeguard our data—just like wearing a seat belt, installing smoke alarms, and putting on sunscreen. Author Carey Parker has structured this book to give you maximum benefit with minimum effort. If

A visionary and optimistic thinker examines the tension between privacy and publicness that is transforming how we form communities, create identities, do business, and live our lives. Thanks to the internet, we now live—more and more—in public. More than 750 million people (and half of all Americans) use Facebook, where we share a billion times a day. The collective voice of Twitter echoes instantly 100 million times daily, from Tahrir Square to the Mall of America, on subjects that range from democratic reform to unfolding natural disasters to celebrity gossip. New tools let us share our photos, videos, purchases, knowledge, friendships, locations, and lives. Yet change brings fear, and many people—nostalgic for a more homogeneous mass culture and provoked by well-meaning advocates for privacy—despair that the internet and how we share there is making us dumber, crasser, distracted, and vulnerable to threats of all kinds. But not Jeff Jarvis. In this shibboleth-destroying book, *Public Parts* argues persuasively and personally that the internet and our new sense of publicness are, in fact, doing the opposite. Jarvis

travels back in time to show the amazing parallels of fear and resistance that met the advent of other innovations such as the camera and the printing press. The internet, he argues, will change business, society, and life as profoundly as Gutenberg's invention, shifting power from old institutions to us all. Based on extensive interviews, *Public Parts* introduces us to the men and women building a new industry based on sharing. Some of them have become household names—Facebook's Mark Zuckerberg, Google's Eric Schmidt, and Twitter's Evan Williams. Others may soon be recognized as the industrialists, philosophers, and designers of our future. Jarvis explores the promising ways in which the internet and publicness allow us to collaborate, think, ways—how we manufacture and market, buy and sell, organize and govern, teach and learn. He also examines the necessity as well as the limits of privacy in an effort to understand and thus protect it. This new and open era has already profoundly disrupted economies, industries, laws, ethics, childhood, and many other facets of our daily lives. But the change has just begun. The shape of the future is not assured. The amazing new tools of publicness can be used to good

ends and bad. The choices—and the responsibilities—lie with us. Jarvis makes an urgent case that the future of the internet—what one technologist calls “the eighth continent”—requires as much protection as the physical space we share, the air we breathe, and the rights we afford one another. It is a space of the public, for the public, and by the public. It needs protection and respect from all of us. As Secretary of State Hillary Clinton said in the wake of the uprisings in the Middle East, “If people around the world are going to come together every day online and have a safe and productive experience, we need a shared vision to guide us.” Jeff Jarvis has that vision and will be that guide.

"Amber understands how important it is for all of us, both as individuals and as businesses, to be able to use social media to connect with people in ways that are real and authentic. I think she's a leader in this space." -Tony Robbins, world-renowned speaker and entrepreneur Amber Mac wants to be your friend. She may be a tech-savvy webpreneur, the popular host of TV shows and video podcasts, and an in-demand consultant and speaker, but if you ask Amber Mac about her strategy for success, she'll tell you she's just trying to be a good friend.

When it comes to social media-whether it's Facebook or Twitter or the latest video blog-the tools evolve quickly, the rules change rapidly, and the technology feels more and more complex. But making social media work for your company doesn't have to be complicated or expensive. In this compact yet thorough guide, Mac shows you how to effectively harness the online world to grow your business. The secret: think of your audience as your friends and then treat them that way. The Power Friending approach is all about developing real relationships based on mutual respect and support. While you may never meet some of your online friends face-to-face, they still expect you to follow the established norms of friendship: be authentic, reach out, listen. And don't lie to your friends. These same rules apply when building a strong brand online. Whether you're a blogger,

a small company, a well-known global enterprise, or an aspiring queen of the Internet, Mac shows how to make the most of social networking tools, including: -Targeting the right networks -Feeding and seeding a community -Authentically engaging with customers and fans -Managing your online friendships on a daily basis and on a budget This isn't a book of abstract theories or complicated strategies. Mac writes from personal experience: she built a huge fan base through social networking. She also draws on real-life and up-to-date examples to give you the information you really need in order to establish and maintain credibility and meaningful relationships online. An introduction to computer security and cyber crime explains how users can protect their bank accounts, digital photographs, music collection, personal identity, and any other information on the PC, with guidelines on how to search out and destroy spyware and lock out hackers, spammers, and identity thieves. measures that you can do in a weekend. We also take an in-depth look at the security measures Microsoft put in Windows Vista. We also look at how Vista responds to the key threats. It teaches you how to tweak the system and make Microsoft's new security features—like the User Access Control—less annoying and helps you adjust the system to be usable. It shows you how to set up Vista to protect your system from your kids—the biggest security hazard to your computer. • More than 5 million spam emails flood the Internet daily—many with your name on them—we show you how to make yourself invisible to detestable spammers! • Did you know that hackers are snooping around your IP address right now, while you read this? They might already have breached what security you have and could be running amok with your personal data. Stop them dead in their tracks with a few simple steps! • Identity theft is the most popular form of consumer fraud today, and last year thieves stole more than \$100 million from people just like you. Put a stop to the madness with the steps provided in this book! • Spyware—nasty little programs that you might not even know you have installed on your PC—could be causing your PC to crash. We show you how to root it out of your system and prevent further infection. STUCK IN A corporate job rut and faced with an unraveling marriage at the age of thirty-six, Roz Savage sat down one night and wrote two versions of her own obituary -- the one that she wanted and the one she was heading for. They were very different. She realized that if she carried on as she was, she wasn't going to end up with the

life she wanted. So she turned her back on an eleven-year career as a management consultant to reinvent herself as a woman of adventure. She invested her life's savings in an ocean rowboat and became the first solo woman ever to enter the Atlantic Rowing Race. Her 3,000-mile trial by sea became the challenge of a lifetime. Of the twenty-six crews that set out from La Gomera, six capsized or sank and didn't make it to the finish line in Antigua. There were times when she thought she had hit her absolute limit, but alone in the middle of the ocean, she had no choice but to find the strength to carry on. In *Rowing the Atlantic* we are brought on board when Savage's dreams of feasts are nourished by yet another freeze-dried meal. When her gloves wear through to her blistered hands. When her headlamp is the only light on a pitch-black night ocean that extends indefinitely in all directions. When, one by one, all four of her oars break. When her satellite communication fails. Stroke by stroke, Savage discovers there is so much more to life than a fancy sports car and a power-suit job. Flashing back to key moments from her life before rowing, she describes the bolt from the blue that first inspired her to row across oceans and how this
