Food engineering is a required class in food science programs, as outlined by the Institute for Food Technologists (IFT). The concepts and applications are also required for professionals in food processing and manufacturing to attain the highest standards of food safety and quality. The third edition of this successful textbook succinctly presents the engineering concepts and unit operations used in food processing, in a unique blend of principles with applications. The authors use their many years of teaching to present food engineering concepts in a logical progression that covers the standard course curriculum. Each chapter describes the application of a particular principle followed by the quantitative relationships that define the related processes, solved examples, and problems to test understanding. The subjects the authors have selected to illustrate engineering principles demonstrate the relationship of engineering to the chemistry, microbiology, nutrition and processing of foods. Topics incorporate both traditional and contemporary food processing operations.

This book examines the phenomenon of 'digital guru media' (DGM), the self-styled online influencers, life coaches, experts and entrepreneurs who post on the themes of wellness, health and fitness. It opens up new perspectives on digital leisure and internet celebrity culture, and asks important questions about the social, cultural and psychological implications of our contemporary relationship with digital media. Drawing on cutting-edge social theory, the book explores a wide range of contexts in which DGM intersects with digital leisure, from the health-related learning of young people to the 'clean eating' movement, to the online lives of fitness professionals. It asks if digital and social media are problematic per se and explores the problems a turn to the Internet could be revealing about the lack of real-world or analogue support, as well as potential solutions, for our wellness, health and fitness needs and wants. Bringing together innovative, multi-disciplinary perspectives, this book is fascinating reading for anybody with an interest in leisure studies, media studies, cultural studies, sociology, or health and society.

The acclaimed author of Carved in Sand—a veteran investigative journalist who endured persistent back pain for decades—delivers the definitive book on the subject: an essential examination of all facets of the back pain industry, exploring what works, what doesn't, what may cause harm, and how to get on the road to recovery. In her effort to manage her chronic back pain, investigative reporter Cathryn Jakobson Ramin spent years and a small fortune on a panoply of treatments. But her discomfort only intensified, leaving her feeling frustrated and perplexed. As she searched for better solutions, she exposed a much bigger problem. Costing roughly \$100 billion a year, spine medicine—often ineffective and sometimes harmful—exemplified the worst aspects of the U.S. health care system. The result of six years of intensive investigation, Crooked offers a startling look at the poorly identified risks of spine medicine, and provides practical advice and solutions. Ramin interviewed scores of spine surgeons, pain management doctors, physical medicine and rehabilitation physicians, exercise physiologists, physical therapists, chiropractors, specialized bodywork practitioners. She met with many patients whose pain and desperation led them to make life-altering decisions, and with others who triumphed over their limitations. The result is a brilliant and comprehensive book that is not only important but essential to millions of back pain sufferers, and all types of health care professionals. Ramin shatters assumptions about surgery, chiropractic methods, physical therapy, spinal injections and painkillers, and addresses evidence-based rehabilitation options—showing, in detail, how to avoid therapeutic dead ends, while saving money, time, and considerable anguish. With Crooked, she reveals what it takes to outwit the back pain industry and get on the road to recovery.

This edition of Importing Into the United States contains material pursuant to the Trade Act of 2002 and the Customs Modernization Act, commonly referred to as the Mod Act. Importing Into the United States provides wide-ranging information about the importing process and import requirements. We have made every effort to include essential requirements, but it is not possible for a book this size to cover all import laws and regulations. Also, this publication does not supersede or modify any provision of those laws and regulations. Legislative and administrative changes are always under consideration and can occur at any time. Quota limitations on commodities are also subject to change. Therefore, reliance solely on the information in this book may not meet the "reasonable care" standard required of importers.

From a Pulitzer Prize-winning investigative reporter at The New York Times comes the troubling story of the rise of the processed food industry -- and how it used salt, sugar, and fat to addict us. Salt Sugar Fat is a journey into the highly secretive world of the processed food giants, and the story of how they have deployed these three essential ingredients, over the past five decades, to dominate the North American diet. This is an eye-opening book that demonstrates how the makers of these foods have chosen, time and again, to double down on their efforts to increase consumption and profits, gambling that consumers and regulators would never figure them out. With meticulous original reporting, access to confidential files and memos, and numerous sources from deep inside the industry, it shows how these companies have pushed ahead, despite their own misgivings (never aired publicly). Salt Sugar Fat is the story of how we got here, and it will hold the food giants accountable for the social costs that keep climbing even as some of the industry's own say, "Enough already."

This book presents WHO guidelines for the protection of public health from risks due to a number of chemicals commonly present in indoor air. The substances considered in this review, i.e. benzene, carbon monoxide, formaldehyde, naphthalene, nitrogen dioxide, polycyclic aromatic hydrocarbons (especially benzo[a]pyrene), radon, trichloroethylene and tetrachloroethylene, have indoor sources, are known in respect of their hazardousness to health and are often found indoors in concentrations of health concern. The guidelines are targeted at public health professionals involved in preventing health risks of environmental exposures, as well as specialists and authorities involved in the design and use of buildings, indoor materials and products. They provide a scientific basis for legally enforceable standards.

It has become popular to blame the American obesity epidemic and many other health-related problems on processed food. Many of these criticisms are valid for some processed-food items, but many statements are overgeneralizations that unfairly target a wide range products that contribute to our health and well-being. In addition, many of the proposed dangers allegedly posed by eating processed food are exaggerations based on highly selective views of experimental studies. We crave simple answers to our questions about food, but the science behind the proclamations of food pundits is not nearly as clear as they would have you believe. This book presents a more nuanced view of the benefits and limitations of food processing and exposes some of the tricks both Big Food and its critics use to manipulate us to adopt their point of view. Food is a source of enjoyment, a part of our cultural heritage, a vital ingredient in maintaining health, and an expression of personal choice. We need to make those choices based on credible information and not be beguiled by the sophisticated marketing tools of Big Food nor the ideological appeals and gut feelings of self-appointed food gurus who have little or no background in nutrition.

One of the most significant books to have been written by a New Zealand business leader. Phillip Mills, the Ernst and Young Entrepreneur of the Year and a global exporter of fitness programmes to 71 countries, has spent the last year forming his views on health and fitness and sustainability into an engaging and challenging book, *Fighting Globesity*. All New Zealanders should read it. As Phillip jokes, "What would a couple of gym bunnies know about climate change and sustainability?" As it turns out, rather a lot. Phillip has done wide reading and research in this area over the last few years. From that he has distilled a carefully argued message: we need to get fit and stay fit, we need to consume fewer resources, we need to urgently engage with health and climate change issues - and we can make a difference. In this he may well be a step ahead of many other business thinkers. Accompanied by exercise and training programmes, nutritional information, recipes and more, *FIGHTING GLOBESITY* is a perfect health, fitness and philosophy package. *FIGHTING GLOBESITY - A Practical Guide To Personal Health And Global Sustainability* combines the Mills's experience to create a cutting-edge lifestyle prescription which will be sustainable for both the individual and the planet.

In the past 20 years micronutrients have assumed great public health importance and a considerable amount of research has led to increasing knowledge of their physiological role. Because it is a rapidly developing field, the WHO and FAO convened an Expert Consultation to evaluate the current state of knowledge. It had three main tasks: to review the full scope of vitamin and minerals requirements; to draft and adopt a report which would provide recommended nutrient intakes for vitamins A, C, D, E, and K; the B vitamins; calcium; iron; magnesium; zinc; selenium; and iodine; to identify key issues for future research and make preliminary recommendations for the handbook. This report contains the outcome of the Consultation, combined with up-to-date evidence that has since become available.

The riveting novel of iron-willed Alva Vanderbilt and her illustrious family as they rule Gilded-Age New York, written by Therese Anne Fowler, a New York Times bestselling author of *Z: A Novel of Zelda Fitzgerald*. Alva Smith, her southern family destitute after the Civil War, married into one of America's great Gilded Age dynasties: the newly wealthy but socially shunned Vanderbilts. Ignored by New York's old-money circles and determined to win respect, she designed and built nine mansions, hosted grand balls, and arranged for her daughter to marry a duke. But Alva also defied convention for women of her time, asserting power within her marriage and becoming a leader in the women's suffrage movement. With a nod to Jane Austen and Edith Wharton, in *A Well-Behaved Woman* Therese Anne Fowler paints a glittering world of enormous wealth contrasted against desperate poverty, of social ambition and social scorn, of friendship and betrayal, and an unforgettable story of a remarkable woman. Meet Alva Smith Vanderbilt Belmont, living proof that history is made by those who know the rules—and how to break them. Covers more than a century of movie history. Every film profile is packed with details including the director and cast, a plot summary and production notes, and little-known facts relating to the film's history
