The series (Clinical Approaches and Procedures in Cosmetic Dermatology) intends to be a practical guide in Cosmetic Dermatology. Procedures in cosmetic dermatology are very popular and useful in medicine, indicated to complement topical and oral treatments not only for photodamaged skin but also for other dermatosis such as acne, rosacea, scars, etc. Also, full-face treatments using peeling, lasers, fillers and toxins are increasingly being used, successfully substituting or postponing the need for plastic surgeries. Altogether, these techniques not only provide immediate results but also help patients to sustain long-term benefits, both preventing/treating dermatological diseases and maintaining a healthy and youthful skin. Throughout this series, different treatments in Cosmetic Dermatology will be discussed in detail covering the use of many pharmacological groups of cosmeceuticals, the new advances in nutraceuticals and emerging technologies and procedures. This volume, entitled (Daily Routine in Cosmetic Dermatology) will be an important tool for aesthetic doctors, practicing dermatologists, plastic surgeons, and all other physicians interested in the field of aesthetic medicine. The buttonhole method for the cannulation of the arteriovenous fistula was discovered more than 40 years ago and was soon adopted on a wide scale due to its obvious benefits of decreased puncture pain and extension of the life of the arteriovenous fistula. Following reports of complications such as a higher incidence of access-related infections, the method has lately been the subject of intense scrutiny; recent research has focused on the mechanisms of buttonhole access-related infections and newer techniques that may have bearing on the future use of the buttonhole method. This book presents an easily accessible overview of information relevant to the subject, including history, benefits and the latest research results related to the buttonhole cannulation method. It aims to rekindle an awareness of the advantages of this method and to encourage a critical analysis of possible techniques to overcome current barriers that prevent a wider spread of the technique. Thoroughly revised and updated, this comprehensive, authoritative reference will help both the experienced and novice practitioner diagnose skin diseases and disorders more accurately and effectively. A superb full colour art program illustrating both neoplastic and non-neoplastic conditions will help the clinician easily interpret key clinical and diagnostic points.
