An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and social conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, so he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers can improve educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their parents yell at them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement will produce solid and happy ones. Ultimately these experiments are very loving, and the outcome is redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* gives you everything you need to know about the latest literature on parenting—with lessons that are so easy. You'll be laughing and learning at the same time.

*Medical-Surgical Nursing: An Integrated Approach, 2E* examines all aspects of this nursing field, from how and where the health care delivery system is set up, to the nurse's role in care related to treatment and diagnostic testing, to legal and ethical responsibilities, communication, and cultural diversity. This revised edition also includes new chapters covering alternative therapies, and responding to medical emergencies. Case studies, critical thinking questions, and exercises developing care plans encourage students to think beyond the classroom. Full color illustrations, cross-referencing between chapters, and suggested resources are among the many features that will appeal to students. Diagnostic tests are listed alphabetically in chart form making important information about the test, normal values, and nursing responsibilities easy to find. Chapter end critical thinking questions help students apply the content. "Web Flash" box suggests Internet sites students can consult for additional information. Includes a glossary, a list of abbreviations and acronyms, a listing of the latest NANDA nursing diagnoses and Standard Precautions
