LG Electronics launched its brand in the late 1950s and became a household name for electronics and appliances. As the company expanded its range of products and services, LG Electronics has now become renowned mobile technology. The company offers a range of smartphones; the latest of which include the LG V30. This new smart phone is scheduled to be released to the public in November. Being announced, reviews on the new device have been overwhelmingly positive. The device has been lauded for its plethora of innovative features as well as its appeal to a wider cross-section of the target market. Among the features that users will benefit from is a 6 inch display outfitted with OLED FullVision, a 2.45 gigahertz processor, a 5 megapixel front facing camera and a 16 megapixel rear camera with outstanding resolution of 4656 by 3492 and LED flash.

The newest version of the LG phone has surprised everyone, packing a huge 5.7 inch display into a body smaller than the G5 which had a display of 5.3 inches. Weighing in at 5.75 ounces (163g), this glass and aluminium phone measures 148.9 mm (5.87 inches) tall, 71.9mm (2.83 inch) wide by 7.9mm (0.31 inch) thick. It is available in two colors, namely: Platinum, and Black.

Then After going through a period of financial loss and other companies taking over the market place with their phones; LG has come back with the new LG G5 Smartphone. The LG G4 was a great phone giving users a f/1. 16-megapixel camera and the premium leather finish. However, it didn't stand out the way the company had expected it to. It brought with it few minor hiccups and missteps that is not easily forgotten.

Smartphones are getting a little boring. All of the top devices have roughly the same features and specs. Manufacturers are trying harder than ever to differentiate their devices. The display has become an area of experimentation, but we're not talking about pixels. More and more devices are getting curved displays, and one of the best entries is the LG G Flex 2. We're at a point where many people consider curved displays to be nothing more than a gimmick. Manufacturers keep trying to find valuable uses, but so far no one has made a compelling case for why you need a curved display. LG has taken a much different approach. The G Flex 2 is not full of gimmicky features and silly widgets. It's all about comfort, and that might be the best reason yet for curved displays.
