In these economically constrained times, the Bible's emphasis on freedom and love offers both relief from the burdens we carry and a radical new way to live. The release from slavery and debt that lay at the heart of Israel's cycle of Jubilee celebrations reveals that the whole of the Law and Prophets, as fulfilled by Christ, is about loving God and loving our neighbour. But in practice it's difficult not to be influenced by consumerism and individualism. How do we guard against this? How can we apply our faith in practical ways? What disciplines may we put in place to help us worship God in every area of our lives?

This book examines the law of product liability from a comparative perspective. With the European Directive on Product Liability enacted over 20 years ago, this publication analyses the state of product liability in a number of key jurisdictions including both Western European countries and New Member States. Account is also taken of developments further afield, including the United States and Japan. Distinguished contributors, including a high court judge, European Commission official, leading litigators and academics, provide individual country reports and a number of integrated comparative studies. The book is designed for practical use by legal practitioners, academics, students and others interested in the area of contract, tort, civil procedure and multi-party litigation. In particular, practitioners will find the country reports an essential reference point.

The Caribbean Community (CARICOM) Member States, are among the first small island developing states (SIDS) to be affected by climate change. Each of the Member States emits less than 1% of global greenhouse gas emissions. However, they are confronted with this global negative externality. After more than two decades of negotiations, in 2015, the international community agreed upon a new international treaty to address climate change: the Paris Agreement. A notable achievement of the Paris Climate Agreement is that it encourages climate change mitigation action in both developed and developing countries. Since the Paris Climate Agreement marks an important milestone in the international climate change negotiations, this book seeks to explore the policy climate change action which can be implemented by the CARICOM Member States to build their resilience in the post-Paris Climate Agreement Era. This book considers climate change issues facing the CARICOM Member States such as the National Determined Contributions (NDC) framework, the urgency for climate finance to facilitate the coastal

adaptation to climate change, the need for the United Nations Framework Convention on Climate Change (UNFCCC) to simplify and standardise the financing framework for its various trust funds, and the moral obligation of the international community to develop a financial mechanism to address loss and damage from climate change.

The new and updated edition of Microeconomic Policy provides an excellent blend of theory and application to foster understanding of economic-based policy making. The book is eclectic in its approach and addresses a rich set of current applications. It is an ideal book for teaching microeconomic-based policy analysis to students. Todd Sandler, University of Texas at Dallas, US Designed for students who have already encountered the microeconomic principles, this valuable text focusses effectively on their policy implications, imbuing the apparently dry theory with its insights for the general welfare. William J. Baumol, New York University, US and Princeton University, US A distinctive feature of this book is the application of microeconomics to public policy. As to be expected given the international reputation of the authors there is a thorough treatment of global environmental policies, including the Stern Report, and a very useful chapter on issues of defence, conflict and terrorism. What this text offers, and most competing books do not is the breadth of coverage. In this revised edition we have integration into the topics of advances in behavioural, evolutionary and Austrian economics. The relevance to business management and government policy of the material presented makes the subject come alive in application. . . a refreshing change from the curve-shifting that dominates traditional microeconomic texts which turns-off so many of our students and prevents them from seeing the crucial importance of economics to almost every aspect of our well-being. John Lodewijks, University of Western Sydney, Australia This thoroughly accessible textbook shows students how microeconomic theory can be used and applied to major issues of public policy. In this way, it will improve their understanding of both microeconomic theory and policy and also develop their ability to critically assess them. Clem Tisdell and Keith Hartley have expanded upon their previous successful work on microeconomics. As a result, this new book is considerably updated with substantial chapter revisions, as well as new chapters dealing with business management, ownership, environmental issues, public choice, defence,

conflict and terrorism. Promoting a thorough understanding of this complex yet fundamental topic, *Microeconomic Policy: A New Perspective* will undoubtedly prove an invaluable textbook for all students, academics and researchers of economics and public policy.

This textbook covers the syllabus of the papers on economy, state and society of undergraduate and postgraduate courses in Economics in India. It also covers the topics under the paper on history of economic thought taught in some colleges/universities. The book explains the emergence, evolution and working of the capitalist system with the help of some of the major principles and theories of economics, both mainstream and heterodox. It interrelates economics and economic life with other aspects of our lives—social, cultural, political, religious and intellectual. This book departs from the traditional analysis of the capitalist system in integrating the real sector of the economy with its monetary sector, and carries forward Keynes' analysis. It combines Keynesian and Marxian approaches to the subject and emphasises the dialectical unfolding of life that underlies the interrelation between the economy, state and society. It underlines that the capitalist system is constantly changing, propelled by the tendency towards increasing concentration of ownership and control of the means of production in fewer and fewer hands. The book comes with an Instructor's Manual to aid the teaching of the subject.

This volume features forty-two essays written in honor of Joseph Agassi. It explores the work and legacy of this influential philosopher, an exciting and challenging advocate of critical rationalism. Throughout six decades of stupendous intellectual activity, Agassi called attention to rationality as the very starting point of every notable philosophical way of life. The essays present Agassi's own views on critical rationalism. They also develop and expand upon his work in new and provocative ways. The authors include Agassi's most notable pupils, friends, and colleagues. Overall, their contributions challenge the received view on a variety of issues concerning science, religion, and education. Readers will find well-reasoned arguments on such topics as the secular problem of evil, religion and critical thinking, liberal democratic educational communities, democracy and constitutionalism, and capitalism at a crossroad.

To Joseph Agassi, philosophy is the practice of reason, where reason is understood as the relentless search for criticisms of the best available explanations that we have to the world around us. This book not only honors one of the most original philosophers of science today. It also offers readers insights into a school of thought that lies at the heart

of philosophy.

This research monograph answers the question how sustainability driven entrepreneurs (ecopreneurs) deliver their sustainability goals through their business practices. The research draws on data from 12 case studies set within the food industry. The analysis takes a firm level and a supply chain level perspective and provides insights to the interconnected nature of sustainability goals within and across firms. It provides theoretical propositions that show one approach of how to conduct business in a way that works for the planet and people in addition to shareholders. This presents an alternative understanding of organisational performance that builds the foundation for many avenues of future research into sustainable management. The research combines the remote areas of supply chain management and entrepreneurship at the intersection of sustainability. This novel approach and the insights from the business practice exploration, offer many avenues for further research beyond entrepreneurship and supply chain management. This book will be of interest to academics in management research and also to people with an academic background that work together with sustainability driven and/ or social entrepreneurs, who could benefit from the insights into how sustainability goals are delivered through business practices and the relevant trade-offs faced by ecopreneurs.

A full edition and study of Bryson's Management of the Estate, edited by a leading expert in both Classics and Arabic literature. In light of the worldwide economic crises, the public sector is coming under increasing financial pressure as budgets are reduced on a large scale whilst demands for public services are on the rise. In such austere times managers working in the public sector are confronted daily with targets and demands that are often set in confusing accounting and financial language. In Financial Management and Accounting in the Public Sector, Gary Bandy employs a clear and concise narrative to introduce the core concepts of accounting and financial management in the public sector and how to deliver services that are value for money. With a glossary of terms to help managers understand and be understood by accountants, as well as learning objectives and discussion questions, this 'hands-on' textbook will help students of public management and administration to understand the

financial and accounting aspects of creating public value.

This volume documents on-going research and theorising in the sub-field of mathematics education devoted to the teaching and learning of mathematical modelling and applications. Mathematical modelling provides a way of conceiving and resolving problems in the life world of people whether these range from the everyday individual numeracy level to sophisticated new problems for society at large. Mathematical modelling and real world applications are considered as having potential for multi-disciplinary work that involves knowledge from a variety of communities of practice such as those in different workplaces (e.g., those of educators, designers, construction engineers, museum curators) and in different fields of academic endeavour (e.g., history, archaeology, mathematics, economics). From an educational perspective, researching the development of competency in real world modelling involves research situated in crossing the boundaries between being a student engaged in modelling or mathematical application to real world tasks in the classroom, being a teacher of mathematical modelling (in or outside the classroom or bridging both), and being a modeller of the world outside the classroom. This is the focus of many of the authors of the chapters in this book. All authors of this volume are members of the International Community of Teachers of Mathematical Modelling (ICTMA), the peak research body into researching the teaching and learning of mathematical modelling at all levels of education from the early years to tertiary education as well as in the workplace. Australian competition law has just emerged from a significant period of reform which has seen controversial changes to the legal test to distinguish between normal competitive conduct and conduct that should be condemned. The controversy continues, arguably because the traditional legal conception of market power does not provide a useful standard in real world markets. This important new book offers a radical interpretation of market power, based on the power to manipulate. Seeing it in this way allows for positive and normative standards within which to frame a legal theory of liability for misuse of that power. The book provides suggestions to improve the forensic assessment of conduct that should be condemned as misuse of market power.

The school-to-work transition has been an important topic in the fields of education and sociology research in the past few years. Pre-vocational education, which takes place during lower-secondary school and aims to facilitate the school-to-work transition, is of critical significance in introducing the participants to the world of work and/or in preparing them for entry into further vocational education programs. With its comparative nature, Jun Li presents this systematic investigation of the pre-vocational education in Germany and China and analyzes the effectiveness of pre-vocational education. By combining the methods of content analysis and teacher interview, the author offers an in-depth perspective on the nature of pre-vocational education and reveals the divergences between the prescribed curriculum and the enacted curriculum. The findings also contribute to an intensively discussed issue in the sociology of education in the past few years, namely the issue of knowledge and its status, further education, and the school education today.

This book will focus on the up-front activities required for product and service differentiation, the

learning methodologies that contribute to arriving at that differentiation, and the role that technology plays in implementing the process. The book will show how technology factors into such entrepreneurial activities as engaging in business planning and utilizing creativity and innovation, and how creative innovation, in turn, is achieved and enhanced through an understanding of two different modes of learning: "learning about" and "learning by doing". A successful product introduction depends on an efficient supply chain, a strong brand, and the ability of a manufacturer or provider to differentiate it successfully in the marketplace. New Product and Services Development demonstrates how differentiation, this last critical component, can be secured by the strategic use of technology and by engaging in two key learning methodologies.

Since 2008, the financial sector has been the subject of extensive criticism. Much of this criticism has focused on the morality of the actors involved in the crisis and its extended aftermath. This book analyses the key moral and political philosophical issues of the crisis and relates them to the political economy of finance. It also examines to what extent the financial sector can or should be reformed. This book is unified by the view that the financial sector had been a self-serving and self-regulating elite consumed by greed, speculation and even lawlessness, with little sense of responsibility to the wider society or common good. In light of critical analysis by authors from a variety of backgrounds and persuasions, suggestions for reform and improvement are proposed, in some cases radical reform. By placing the world of finance under a microscope, this book analyses the assumptions that have led from hubris to disgrace as it provides suggestions for an improved society. Rooted in philosophical reflection, this book invites a critical reassessment of finance and its societal role in the 21st century. This book will be of interest to academics, politicians, central bankers and financial regulators who wish to improve the morality of finance.

Focusing on the growing power of transnational media corporations in an increasingly globalized environment for distribution of television content, and on the effects of mergers and acquisitions involving local and independent television production companies, this book examines how current and recent re-structurings in ownership across the television industry reflect changing business models, how they affect creativity and diversity of television output, and to what extent they call for new approaches to regulation and policy. Based on a major study of the UK production sector as a case study, it offers a unique analysis of wider transformations in ownership affecting the television production industry worldwide and of their economic, socio-cultural and policy implications.

The chief executive officer (CEO) of a corporation and his or her executive team are responsible for the management of the business and its continued operating and financial success. The CEO and executive team are almost always highly compensated and the relative total compensation has mushroomed over time. Most of the compensation now is designed to be performance-based, but leading to charges that executives have incentives to manipulate corporate earnings and stock price in the short-term for their own self interests. The compensation at some companies became so egregious that compensation again became a major public policy issue subject to federal regulation. Executive Compensation focuses on the major topics related to executive compensation--present, past, and future. First, is understanding what executive

compensation is, including composition and objectives of pay contracts. Second, how do specific compensation agreements affect corporate behavior and performance? Third, what are the major components, including how and what are accounted for and disclosed? How is compensation, especially executive compensation, accounted for—that is, what are the calculations and journal entries required? Fourth, what does historical analysis tell us about the topic, especially how contractual decisions have been made and what has worked. Finally, what is in store for the future—both expected compensation agreements and what the compensation incentives suggest for future corporate decisions on operations and accounting manipulation.
