Scienze Regionali***

This book addresses the issue of smart and sustainable development in the Mediterranean (MED) region, a distinct part of the world, full of challenges and risks but also opportunities. Above all, the book focuses on smartening up small and medium-sized cities and insular communities, taking into account their geographical peculiarities, the pattern of MED urban settlements and the abundance of island complexes in the MED Basin. Taking for granted that sustainability in the MED is the overarching policy goal that needs to be served, the book explores different aspects of smartness in support of this goal's achievement. In this respect, evidence from concrete smart developments adopted by forerunners in the MED region is collected and analyzed; coupled with experiences gathered from successful, non-MED, examples of smart efforts in European countries. More specifically, current research and empirical results from MED urban environments are

discussed, as well as findings from or concerning other parts of the world, which are of relevance to the MED region. The book's primary goal is to enable policymakers, planners and decision-making bodies to recognize the challenges and options available; and make to more informed policy decisions towards smart, sustainable, inclusive and resilient urban and regional futures in the MED.

The six volumes LNCS 11619-11624 constitute the refereed proceedings of the 19th International Conference on Computational Science and Its Applications, ICCSA 2019, held in Saint Petersburg, Russia, in July 2019. The 64 full papers, 10 short papers and 259 workshop papers presented were carefully reviewed and selected from numerous submissions. The 64 full papers are organized in the following five general tracks: computational methods, algorithms and scientific applications; high performance computing and networks; geometric modeling, graphics and visualization; advanced and emerging applications; and information systems and technologies. The 259 workshop papers were presented at 33 workshops in various areas of computational sciences, ranging from

computational science technologies to specific areas of computational sciences, such as software engineering, security, artificial intelligence and blockchain technologies.

Teorie, approcci e modelli per lo sviluppo territoriale

Sviluppo locale, Europa, nazionalismi.

Territorio e globalizzazione in una prospettiva critica

Firms, Cities, Territories

Avevo sentito parlare di Regional Science. Un tributo a Giuliano Bianchi

**A considerable amount of work has been conducted in the field of peace studies, conflict management, peace science in economics, sociology, anthropology and management. This title presents research with an emphasis on theoretical and mathematical constructs in the area of peace economics & peace science.**

This book explores the role of cities and the urban-rural linkages in spurring innovation embedded in spatial planning, strategic and economic planning, and decision support systems. In particular, the contributions examine the complexity of the current transitional phase towards achieving smart, inclusive and sustainable growth, and investigate the post-2020 UE cohesion policy. The main topics include: Innovation dynamics and smart cities; Urban regeneration - community-led and PPP; Inland and urban area development; Mobility, accessibility, infrastructures; Heritage, landscape and Identity; and Risk management, Environment and Energy. The book includes a selection of articles accepted for presentation and discussion at the 3rd International Symposium New Metropolitan Perspectives (ISTH2020), held at the University of Reggio Calabria, Italy on 22-25 May 2018. The symposium, which addressed the challenge of local knowledge and innovation dynamics towards territory attractiveness, hosted the final event of the MAPS-LED project under Horizon2020 - MSCA RISE.

It is a great pleasure to share with you the Springer CCIS 112 proceedings of the Third World Summit on the Knowledge Society--WSKS 2010--that was organized by

the International Scientific Council for the Knowledge Society, and supported by the Open Research Society, NGO, (<http://www.open-knowledge-society.org>) and the International Journal of the Knowledge Society Research, (<http://www.igi-global.com/ijksr>), and took place in Aquis Corfu Holiday Palace Hotel, on Corfu island, Greece, September 22-24, 2010. The Third World Summit on the Knowledge Society (WSKS 2010) was an international scientific event devoted to promoting the dialogue on the main aspects of the knowledge society towards a better world for all. The multidimensional economic and social crisis of the last couple years brings to the fore the need to discuss in depth new policies and strategies for a human-centric developmental process in the global context. This annual summit brings together key stakeholders of knowledge society development worldwide, from academia, industry, government, policy makers, and active citizens to look at the impact and prospects of information technology, and the knowledge-based era it is creating, on key facets of living, working, learning, innovating, and collaborating in today's hyper-complex world.

The five volume set LNCS 10960 until 10964 constitutes the refereed proceedings of the 18th International Conference on Computational Science and Its Applications, ICCSA 2018, held in Melbourne, Australia, in July 2018. Apart from the general tracks, ICCSA 2018 also includes 34 international workshops in various areas of computational sciences, ranging from computational science technologies, to specific areas of computational sciences, such as computer graphics and virtual reality. The total of 265 full papers and 10 short papers presented in the 5-volume proceedings set of ICCSA 2018, were carefully reviewed and selected from 892 submissions. The paper Nitrogen Gas on Graphene: Pairwise Interaction Potentials is available open access under a Creative Commons Attribution 4.0 International License via [link.springer.com](http://link.springer.com).

The five-volume set LNCS 9786-9790 constitutes the

refereed proceedings of the 16th International Conference on Computational Science and Its Applications, ICCSA 2016, held in Beijing, China, in July 2016. The 239 revised full papers and 14 short papers presented at 33 workshops were carefully reviewed and selected from 849 submissions. They are organized in five thematical tracks: computational methods, algorithms and scientific applications; high performance computing and networks; geometric modeling, graphics and visualization; advanced and emerging applications; and information systems and technologies.

The five-volume set LNCS 9155-9159 constitutes the refereed proceedings of the 15th International Conference on Computational Science and Its Applications, ICCSA 2015, held in Banff, AB, Canada, in June 2015. The 232 revised full papers presented in 22 workshops and a general track were carefully reviewed and selected from 780 initial submissions for inclusion in this volume. They cover various areas in computational science ranging from computational science technologies to specific areas of computational science such as computational geometry and security.

Advanced Cultural Districts explores the organisational design issues within the cultural heritage sector, with particular focus on the advanced forms of cultural districts for local socio-economic development.

The book spans a scientific research program elegantly developed by Roberto Camagni, an eminent regional scientist, who has offered ground-breaking ideas in regional and urban economics throughout his academic career. In addition to bringing together a selection of Professor Camagni's most influential works, the book presents syntheses and interpretations of his ideas by respected colleagues and by his students. In regional economics, space as territory, which plays an active role in innovation processes and in regional growth patterns; territorial capital as a synthetic concept of differentiated regional growth assets; and sources of regional competitiveness are only a few of the main ideas that emerged in regional economics thanks to this inspiring mind. In urban economics, he paved the way

towards a new theoretical interpretation of the existence of the city and of its dynamics. His theory of city networks overcame the limits of Christaller's and Lösch's spatial approach to the city, with a solid economic conceptualization of spatial city network structures. All theories are accompanied by sound policy analysis, helping to contribute to the design and implementation of appropriate spatial policies at the European level.

Politiche dell'ambiente e del territorio  
Globalization and Regional Growth in Europe

Marketing per il territorio. Strategie e politiche per lo sviluppo locale nell'economia globalizzata

**This book introduces a radically spatialised approach to knowledge creation and innovation. Reflecting on an array of European urban and regional developments, it offers an updated notion of milieu as the conceptual and material space of knowledge and innovation in line with the interpretative turn in social sciences and**

humanities. In view of the unwillingness of mainstream economics to accommodate such a trend, the authors pursue a broadly understood hermeneutic approach that expands on the triad of knowledge-space-innovation. The book's main findings are that space is an essential intermediary in the connection between knowledge and innovation, and that a renewed notion of milieu provides the knowledge-space-innovation triad with both an analytical basis and operational power. It also offers fresh insights into the significance and potential of the knowledge economy. A number of empirical European case studies on various scales (organisations, cities and territories) support the findings and suggest new policy directions.

«La realizzazione di un sistema di valutazione della qualità della ricerca è un passo ineludibile per qualsiasi Paese che voglia continuare ad investire in conoscenza ed in innovazione e che intenda essere realmente competitivo sul piano globale.

Nella costruzione di questo sistema non può mancare la "valutazione della valutazione", entrando nel merito delle procedure adottate dagli Organismi preposti alla funzione e degli aspetti metodologici che le hanno caratterizzate. Anche in questo ambito, ugualmente fondamentale per la realizzazione di un valido sistema di valutazione della ricerca pubblica, saranno necessari testi, studi, articoli, saggi che come questo prodotto da Giovanna Loggia dovranno essere

semplici, diretti, idonei ad essere strumenti agili di approfondimento di problematiche estremamente importanti per il futuro stesso della ricerca nel nostro Paese» dalla “Introduzione” di Guglielmo Trupiano

The four-volume set LNCS 7333-7336 constitutes the refereed proceedings of the 12th International Conference on Computational Science and Its Applications, ICCSA 2012, held in Salvador de Bahia, Brazil, in June 2012. The four volumes contain papers presented in the following workshops: 7333 - advances in high performance algorithms and applications (AHPAA); bioinspired computing and applications (BIOCA); computational geometry and applicatons (CGA); chemistry and materials sciences and technologies (CMST); cities, technologies and planning (CTP); 7334 - econometrics and multidimensional evaluation in the urban environment (EMEUE); geographical analysis, urban modeling, spatial statistics (Geo-An-Mod); 7335 - optimization techniques and applications (OTA); mobile communications (MC); mobile-computing, sensind and actuation for cyber physical systems (MSA4CPS); remote sensing (RS); 7336 - software engineering processes and applications (SEPA); software quality (SQ); security and privacy in computational sciences (SPCS); soft computing and data engineering (SCDE). The topics of the fully refereed papers are structured according to the four major conference themes: 7333 -

computational methods, algorithms and scientific application; 7334 - geometric modelling, graphics and visualization; 7335 - information systems and technologies; 7336 - high performance computing and networks. 15th International Conference, Banff, AB, Canada, June 22-25, 2015, Proceedings, Part II

L'industria meridionale oltre la crisi

**After a description of the new forms of globalization currently shaping our world, and of their possible spatial effects, the book highlights which European regions have in the past succeeded in taking advantage of globalization trends and identifies the major reasons for their success. The book also offers a prospective analysis utilizing scenarios based on different assumptions of how globalization trends will develop, identifying the regional winners and losers for each scenario. The analysis greatly benefits from a unique database which contains, among others, data on FDI by sector and professions at the regional Nuts-2 level for all 27 EU countries. A time-span of more than 10 years is**

covered, and scenarios are developed for the future development up to 2020.

The six-volume set LNCS 10404-10409 constitutes the refereed proceedings of the 17th International Conference on Computational Science and Its Applications, ICCSA 2017, held in Trieste, Italy, in July 2017. The 313 full papers and 12 short papers included in the 6-volume proceedings set were carefully reviewed and selected from 1052 submissions. Apart from the general tracks, ICCSA 2017 included 43 international workshops in various areas of computational sciences, ranging from computational science technologies to specific areas of computational sciences, such as computer graphics and virtual reality. Furthermore, this year ICCSA 2017 hosted the XIV International Workshop On Quantum Reactive Scattering. The program also featured 3

keynote speeches and 4 tutorials.

Il concetto di sviluppo territoriale si è evoluto in maniera profonda. Non è più misurato unicamente sulla sua dimensione economica, ma anche su quella politica e sociale. L'attuale visione dello sviluppo ha superato la mera crescita per estendersi all'ambiente, all'innovazione, al capitale sociale e relazionale. Il territorio costituisce la cartina tornasole dello sviluppo. Il territorio è, infatti, il raccordo dell'iniziativa dei vari attori che implementano le strategie di sviluppo e delle interazioni alle - e tra le - diverse scale. La crescita di importanza delle città assume quindi un valore strategico. L'emergere di spinte nazionaliste e sovraniste impone la rilettura delle politiche pubbliche in ambito europeo e delle narrazioni che ripropongono la centralità degli Stati nei confronti della crescente agibilità concessa dall'Unione europea alle regioni. Uno scenario che, in sintonia con il controverso fenomeno della globalizzazione e con la rilevanza acquisita dalle città, offre spazi di manovra alle forze che sostengono il ritorno al primato della sovranità nazionale.

This book represents a first attempt to

investigate the relations between Law and Agroecology. There is a need to adopt a transdisciplinary approach to multifunctional agriculture in order to integrate the agroecological paradigm in legal regulation. This does not require a super-law that hierarchically purports to incorporate and supplant the existing legal fields; rather, it calls for the creation of a trans-law that progressively works to coordinate interlegalities between different legal fields, respecting their autonomy but emphasizing their common historical roots in the process. Rus, the rural phenomenon as a whole, reflects the plurality and interdependence of different complex systems based jointly on the land as a central point of reference. "Rural" is more than "agricultural": if agriculture is understood traditionally as an activity aimed at exploiting the land for the production of material goods for use, consumption and private exchange, rurality marks the reintegration of agriculture into a broader sphere, one that is not only economic, but also social and cultural; not only material,

but also ideal, relational, historical, and symbolic; and not only private, but also public. In approaching *rus*, the natural and social sciences first became specialized, multiplied, and compartmentalized in a plurality of first-order disciplines; later, they began a process of integration into Agroecology as a second-order, multi-perspective and shared research platform. Today, Agroecology is a transdiscipline that integrates other fields of knowledge into the concept of agroecosystems viewed as socio-ecological systems. However, the law seems to still be stuck in the first stage. Following a reductionist approach, law has deconstructed and shattered the universe of *rus* into countless, disjointed legal elementary particles, multiplying the planes of analysis and, in particular, keeping Agricultural Law and Environmental Law two separate fields.
