Shooting to Live with the One-Hand Gun

The SAS in Ireland

Famous throughout the nineteenth century for the quality of its products, the English revolver industry began a steady decline after WWI from which it never recovered. Apart from the famous Webley service revolvers, many products of this important industry are little known outside of the auction house and sale room. This book sets out to rectify that situation, describing Adam's and Tranter's

revolvers, as valued in their day as any of Webley's products, and including guns from the more obscure makers neglected by previous writers. In particular, the chapter on military revolvers is one of the most important sections of the book, beginning with the British government's early purchase of Colt's percussion weapon and concluding with the Webley Service revolvers, strikingly familiar to many who served in the British Army in both World Wars. Finally, many of the guns are pictured here for the first time, a number having been photographed especially for this book.

Shooting to Live describes methods developed and practiced during an eventful quarter of a century and

adopted by numerous police organization in the Far East and elsewhere. It covers everything from the purpose of the pistol, to selection, training, advance methods and more! This book was the first time that fighting with firearms was clearly and explicitly disassociated from classical target/range shooting. The proven techniques displayed have spawned most modern pistol techniques because of their simplicity and effectiveness. It is written as instruction to police forces in the methods of shooting (reflexive/instinctive) and training (realistic/challenging) that the author developed over two decades active service in Shanghai.

Glock: The World's Handgun follows the evolution of the Glock handgun from concept to market leader, and explains each of the many variants and calibres, starting with the original Glock 17 and working through to the latest fourth-generation models.

Looking at the Glock's practical use, the story is both dramatic and, at times, controversial. Glocks have been fired in earnest in the most varied of contexts; users include the Bangladesh Army, French naval commandos, German GSG 9 police, Malaysian customs officials, Singaporean prison guards, the FBI and dozens of US state police forces. Adhesion is among the oldest technologies known to mankind, but the technology of adhesives began to boom with the developments in chemistry in the early 1900s. The last few years have seen tremendous progress in the performance of adhesives, allowing two pieces to be connected inseparably. Modern adhesives perform so well that more sophisticated joining methods, e.g. welding, can often be replaced by adhesion, meaning that adhesives have found new areas of
