To many rural Iowans, the stock market crash on New York's Wall Street in October 1929 seemed an event far removed from their lives, even though the effects of the crash became all too real throughout the state. From 1929 to 1933, the enthusiastic faith that most Iowans had in Iowan President Herbert Hoover was transformed into bitter disappointment with the federal government. As a result, Iowans directly questioned their leadership at the state, county, and community levels with a renewed spirit to salvage family farms, demonstrating the uniqueness of Iowa's rural life. Beginning with an overview of the state during 1929, Lisa L. Ossian describes Iowa's particular rural dilemmas, evoking, through anecdotes and examples, the economic, nutritional, familial, cultural, industrial, criminal, legal, and political challenges that engaged the people of the state. The following chapters analyze life during the early Depression: new prescriptions for children's health, creative housekeeping to stretch resources, the use of farm "playlets" to communicate new information creatively and memorably, the demise of the soft coal mining industry, increased violence within the landscape, and the movement to end Prohibition. The challenges faced in the early Great Depression years between

1929 and 1933 encouraged resourcefulness rather than passivity, creativity rather than resignation, and community rather than hopelessness. Of particular interest is the role of women within the rural landscape, as much of the increased daily work fell to farm women during this time. While the women addressed this work simply as “making do,” Ossian shows that their resourcefulness entailed complex planning essential for families’ emotional and physical health. Ossian’s epilogue takes readers into the Iowa of today, dominated by industrial agriculture, and asks the reader to consider if this model that stemmed from Depression-era innovation is sustainable. Her rich rural history not only helps readers understand the particular forces at work that shaped the social and physical landscape of the past but also traces how these landscapes have continued in various forms for almost eighty years into this century.

A Review of the USDA Mandatory Livestock Reporting Program

Download Ebook Lot Description Price Iowa Department Of John Deere Tractor Loader With Trailer

This book addresses key questions on biofuels within agrarian political economy, political sociology and political ecology. Contributions are based on fresh empirical materials from different parts of the world. The book starts with four key questions in agrarian political economy: Who owns what? Who does what? Who gets what? And what do they do with the surplus wealth? It also addresses the emergent social and political relations in the biofuel complex and, given the impacts on natural resources and sustainability, engages with questions about people-environment interactions. At the same time, the book is concerned with the politics of representation, that is, what are the discursive frames through which biofuels are promoted and/or opposed? The book analyses the institutional structures, and cultures of energy consumption on which a biofuels complex depends, and the alternative political and ecological visions emerging that call the biofuels complex into question. Across sixteen chapters presenting material from five regions across the North-South divide and focusing on fourteen countries including Brazil, Indonesia, India, USA and Germany, these topics are addressed within the following themes: global (re)configurations; agro-ecological visions; conflicts, resistances and diverse outcomes; state, capital and society relations; mobilising opposition, creating alternatives; and change and continuity. This book was published as a special issue of the Journal of Peasant Studies.

"Corn is made mostly of soil moisture and warm air. The acre yield of the United States has been below 31 bushels every year, while moisture and warm air sufficient to bring the yield to 100 bushels have gone to waste. By reducing the waste of moisture and heat corn yields can be doubled. Moisture runs off and carries with it the most fertile parts of the soil. Heat goes to waste in drying the soil and subsoil while timely cultivation would save both heat and moisture. Cultivation sometimes is beneficial, sometime injurious. Page 18. Recent discovery of the fact that seed corn that matures well and

dries out promptly will keep its good germinating and yielding powers for four or five years makes unnecessary planting of poor seed corn or the loss of acclimated and improved strains. Page 23. This bulletin is especially applicable to dry-land regions; but corn yields are so dependent upon the relative quantities of soil moisture and heat that the principles given here apply wherever corn is raised." -- p. [2]

This brochure provides general information about relocation assistance provided by the Iowa Department of Transportation (DOT) for those individuals who may be required to move as a result of a highway project. It is not intended to be a legal document that comprehensively explains every right or obligation you have as established by Chapter 316, Code of Iowa; Federal Public Laws 91-646 and 100-17; and 49 CFR. Your relocation adviser will provide the assistance you need to successfully relocate to a suitable replacement property. Your first contact with your relocation adviser will usually occur during the early stages of the appraisal process, and he or she

will continue to work with you until you have moved and become established at a new location. Do not hesitate to ask questions so you are sure you understand the process, your rights and the benefits available to you. Please let your DOT relocation adviser know your needs and preferences. If your relocation adviser is unable to help you with a specific problem or concern, he or she may know of another person or an organization that can help you.

Institutions like schools, hospitals, and universities are not well known for having quality, healthy food. In fact, institutional food often embodies many of the worst traits of our industrialized food system, with long supply chains that are rife with environmental and social problems and growing market concentration in many stages of food production and distribution. Recently, however, non-profit organizations, government agencies, university research

institutes, and activists have partnered with institutions to experiment with a wide range of more ethical and sustainable models for food purchasing, also known as values-based procurement. Institutions as Conscious Food Consumers brings together in-depth case studies from several of promising models of institutional food purchasing that aim to be more sustainable, healthy, equitable, and local. With chapters written by a diverse set of authors, including leaders in the food movement and policy researchers, this book: Documents growing interest among non-profit organizations and activists in institutional food interventions through case studies and first-hand experiences; Highlights emerging evidence about how these new procurement models affect agro-food supply chains; and Examines the role of policy and regional or geographic identity in promoting food systems change. Institutions as Conscious Food Consumers makes the case that institutions can use their budgets to change the food system for the better, although significant challenges remain. It is a must
