A good book to teach children about the respect of Nature and the treatment of wild animals. Illustrated and written by Annette Breckenridge, this story is a simple but practical message for young children.

Can Leonardo battle ninja robots and keep his troublemaking brothers in line? Kids ages 2 to 5 will find out in this all-new, full-color book starring Nickelodeon's Teenage Mutant Ninja Turtles. This Nickelodeon Read-Along contains audio narration.

This book constitutes the refereed proceedings of the 16th International Conference on Virtual Reality and Augmented Reality, EuroVR 2019, held in Tallinn, Estonia, in October 2019. The 11 full papers and 5 short papers presented together with 8 scientific posters were carefully reviewed and selected from 54 submissions. The papers are organized in topical sections named: Immersive Interaction; Training, Teaching and Learning; Industrial Applications and Data Analysis; Perception, Cognition and Evaluation; and Scientific Posters.

persistent evils of the world: human trafficking and sexual exploitation of slaves. Told in alternating chapters from perspectives spanning more than a century apart, read the riveting 19th century first-hand account of Harriet Jacobs and the modern-day eyewitness account of Timothy Ballard. Harriet Jacobs was an African-American, born into slavery in North Carolina in 1813. She thwarted the sexual advances of her master for years until she escaped and hid in the attic crawl space of her grandmother's house for seven years before escaping north to freedom. She published an autobiography of her life, *Incidents in the Life of a Slave Girl*, which was one of the first open discussions about sexual abuse endured by slave women. She was an active abolitionist, associated with Frederick Douglass, and, during the Civil War, used her celebrity to raise money for black refugees. After the war, she worked to improve the conditions of newly-freed slaves. As a former Special Agent for the Department of Homeland Security who has seen the horrors and carnage of war, Timothy Ballard founded a modern-day "underground railroad" which has rescued hundreds of children from being fully enslaved, abused, or trafficked in third-world

countries. His story includes the rescue and his eventual adoption of two young siblings--Mia and Marky, who were born in Haiti. Section 2 features the lives of five abolitionists, a mix of heroes from past to present, who call us to action and teach us life lessons based on their own experiences: Harriet Tubman--The "Conductor"; Abraham Lincoln--the "Great Emancipator"; Little Mia--the sister who saved her little brother; Guesno Mardy--the Haitian father who lost his son to slave traders; and Harriet Jacobs--a teacher for us all.

Recent years have seen enormous attention devoted to the history of sexuality in the Western world. But how has the West conceived of non-western societies been influenced by these other traditions? *The Geography of Perversion and Desire* is the first historical study to demonstrate convincingly that the representation cultural otherness, as found in European thought from the Enlightenment through modern times, is closely interrelated with modern constructions of homosexual identity. Travel reports and early ethnographic accounts of cross-gender roles in the Americas, Africa, and Asia corroborated the 18th century construction of the sodomite identity. Similarly, the late 19th-century construction of the third sex provoked much anthropological speculation on to genetic versus societal nature of male-to-male sexual relations, a precursor of current essentialist versus constructionist debates. An invaluable contribution to the ongoing debates on cultural and sexual otherness, this volume unravels how the categories of the modern sodomite and later homosexual were inextricably intertwined with essentialist definitions of racial identity. In encyclopedic detail, Bleys traces how cross-cultural records were collected, created, structured, manipulated, excerpted, reformulated, and omitted in interaction with changing beliefs about male-to-male sexuality. Focusing in such subjects as puritanism, sodomy, and ethnicity in colonial North America; cross-gender behavior and hermaphroditism; the semiotics of genitalia; and the parameters of sexual science, *The Geography of Perversion and Desire* is a breathtakingly thorough, cross cultural history of sexual categories. Drawing on

travel reports and early ethnographic accounts, *The Geography of Perversion and Desire* presents the first historical study to demonstrate convincingly that the representation of cultural otherness, as found in European thought from the Enlightenment to modern times, is closely interrelated with modern constructions of homosexual identity.

Rip Van Goofy was a friendly fellow who lived in a sleepy town. He was always chatting with his friends and loved to go fishing. But when his friends were busy one sunny afternoon, Rip Van Goofy set out alone to fish at his favorite fishing hole. Then, with his line in the water, Goofy fell asleep...and woke up forty years later! Don't miss this retelling of the classic tale of Rip Van Winkle—with a Disney twist!

This book presents the work of the RILEM Technical Committee 259-ISR. Addressing two complementary but fundamental issues: the kinetics of the reaction, and how this will affect the integrity of the structure (serviceability and strength), it also provides methodology for assessing past deterioration to enable readers to make engineering/science-based predictions concerning future expansion. The book is divided into six major topics: selection and interpretation of optimal monitoring system for structures undergoing expansion to monitor the progress of the swelling evolution and its consequences; development/refinement of current laboratory procedures to determine the kinetics of the reaction i.e. expansion vs (future) time, and to determine the kinetic characteristics of the time-dependent reaction to be used in a finite element simulation; extrapolation of results from structural component laboratory testing; selection of material properties based on data from existing structures affected by the alkali silica reaction or delayed ettringite formation; identification of critical features that should be present in a finite

element code, development of test problems for validation, and a survey of relevant programs able to conduct a transient structural analysis of a structure undergoing chemically induced expansion; and lastly guidelines for finite element codes. The book is intended for practitioners responsible for concrete structures affected by the damaging alkali aggregate reaction, engineers dealing with aging structures, and researchers in the field.

*2012 Honorable Mention from the Association of Internet Researchers for their Annual Best Book Prize Outstanding Academic Title from 2011 by Choice Magazine This book about America's romance with computer communication looks at the internet, not as harbinger of the future or the next big thing, but as an expression of the times. Streeter demonstrates that our ideas about what connected computers are for have been in constant flux since their invention. In the 1950s they were imagined as the means for fighting nuclear wars, in the*

*1960s as systems for bringing mathematical certainty to the messy complexity of social life, in the 1970s as countercultural playgrounds, in the 1980s as an icon for what's good about free markets, in the 1990s as a new frontier to be conquered and, by the late 1990s, as the transcendence of markets in an anarchist open source utopia. The Net Effect teases out how culture has influenced the construction of the internet and how the structure of the internet has played a role in cultures of social and political thought. It argues that the internet's real and imagined anarchic qualities are not a product of the technology alone, but of the historical peculiarities of how it emerged and was embraced. Finding several different traditions at work in the development of the internet—most uniquely, romanticism—Streeter demonstrates how the creation of technology is shot through with profoundly cultural forces—with the deep weight of the remembered past, and the pressures of shared passions made articulate.*

The challenges described include air pollution, climate change, extreme weather, and related health impacts that range from heat stress, vector-borne diseases, food and water insecurity and chronic diseases to malnutrition and mental well-being. The influence of humans on*

*climate change has been established through extensive published evidence and reports. However, the connections between climate change, the health of the planet and the impact on human health have not received the same level of attention. Therefore, the global focus on the public health impacts of climate change is a relatively recent area of interest. This focus is timely since scientists have concluded that changes in climate have led to new weather extremes such as floods, storms, heat waves, droughts and fires, in turn leading to more than 600,000 deaths and the displacement of nearly 4 billion people in the last 20 years. Previous work on the health impacts of climate change was limited mostly to epidemiologic approaches and outcomes and focused less on multidisciplinary, multi-faceted collaborations between physical scientists, public health researchers and policy makers. Further, there was little attention paid to faith-based and ethical approaches to the problem. The solutions and actions we explore in this book engage diverse sectors of civil society, faith leadership, and political leadership, all oriented by ethics, advocacy, and policy with a special focus on poor and vulnerable populations. The book highlights areas we think will resonate broadly with the public, faith leaders, researchers and students across disciplines including the humanities, and policy makers.*
