and are then extended to the more complex. Separation Process Essentials provides an interactive approach for students to learn the main separation processes (distillation, absorption, stripping, and solvent extraction) using material and energy balances with equilibrium relationships, while referring readers to other more complete works when needed. Membrane separations are included as an example of non-equilibrium processes. This book reviews and builds on material learned in the first chemical engineering courses such as Material and Energy Balances and Thermodynamics as applied to separations. It relies heavily on example problems,

engineering teaching strategies. FUNDAMENTALS OF CHEMICAL ENGINEERING THERMODYNAMICS uses examples to frame the importance of the material. Each topic begins with a motivational example that is investigated in context to that topic. This framing of the material is helpful to all readers, particularly to global learners who require big picture insights, and hands-on learners who struggle with abstractions. Each worked example is fully annotated with sketches and comments on the thought process behind the solved problems. Common errors are presented and explained. Extensive margin notes add to the book's accessibility as well as presenting opportunities for investigation. The book is a history of Western literary criticism and a general introduction to the subject of literary criticism and theory. It follows the survey approach, discussing English literary critics in a historical-chronological order. It is primarily designed to serve as a text/reference book for undergraduate and postgraduate students in Indian universities and colleges. The book deals with the critical

texts that are prescribed for study in many M.A (English) courses in India. One section of the book surveys the contribution made by the ancient critics since knowledge of classical criticism is essential for an understanding of later developments. Another section (sixteenth to twentieth century) takes for close examination, individually, such of those critics as are prescribed in the curricula of M.A. courses in Indian universities and colleges. The last section on Contemporary Criticism, examines all the movements, with special emphasis on theorists who have initiated these movements. The section, A Glossary of Critical Terms, gives short explanatory notes on critical terms with which a student
