The theology of Karl Barth has been a productive dialogue partner for evangelical theology. For too long, however, the dialogue has been dominated by questions of orthodoxy. The present volume seeks to contribute to the conversation through a creative reconfiguration of both partners in the conversation, neither of whom can be rightly understood as preservers of Protestant Orthodoxy. Rather, American

evangelicalism is identified with the revivalist forms of Protestantism that arose in the post-Reformation era, while Barth is revisited as a theologian attuned both to divine and human agency. In the ensuing conversation questions of orthodoxy are not eliminated, but subordinated to a concern for the life of God and God's people. This volume brings together seasoned Barth scholars, evangelical theologians, and some younger voices, united by a common desire to rethink both Karl Barth and evangelical theology. By offering an alternative to the dominant constraints, the book opens up new avenues for fruitful conversation on Barth and the future of evangelical theology.

Most students, regardless of their major, need to understand information systems and technologies and their importance to the success of business organizations. While many of today's students have lived with technology their whole lives, they do not see the connection between what they use every day and what they need to understand to be successful in the business world. Introduction to Business Information Systems, Third Canadian Edition by James Norrie, Michelle Nanjad and Mark Huber focuses on IT as a source of business value and outlines the innovative technologies, as well as the innovative ways to use technology, that help businesses excel. The goal of this book is to teach students that the effective integration of IS with knowledge can drive the creation of significant business value. Introduction to Business Information Systems, Third Canadian Edition is written for both the IT and non-IT major. It is written in a friendly, accessible style that will draw students in and engage them with the content. Expanded coverage of highly technical concepts is included in the Technology Core box found in each chapter as well as the Tech Guides.

Focusing on the processes involved in taking law exams, this book demonstrates how students can do justice to themselves by adopting the techniques employed by successful examinees. Suggestions are made as to the ways in which materials can be manipulated and legal arguments marshalled; and methods are identified by which both essay and, more especially, problem questions can be approached.

"The law of persons is a dynamic area of the law, and it is this dynamic nature that generates interest in this subject and makes it stimulating to teach and learn. Law of Persons seeks to make this subject area

accessible to students, including first-year students. In the law of persons, the common law and legislation have been harmonised with the spirit, purport and objects of the Bill of Rights, while the values entrenched in the Constitution are permeating every area of the law. The greatest change in our law of persons to date has been the Children's Act 38 of 2005: it had redefined basic concepts, it has revolutionised the parent-child relationship, it has ended the labelling of children in terms of their parents' marital status and it has radically altered the legal status of unmarried fathers. Law of Persons is also available in Afrikaans, and should ideally be used in conjunction with Personeregbronnebundel / Law of Persons Sourcebook"--Provided by publisher.

A South African Perspective

This book disseminates original research on learning in and from practice in pre-service teacher education. Authors such as Lederman and Lederman describe the student teaching practicum (or work-integrated learning [WIL]), which is an essential component of pre-service teacher education, as the 'elephant in the room'. These authors note that 'the capstone experience in any teacher education programme is the student teaching practicum.. [a]fter all, this is where the rubber hits the road'. However, many teacher educators will agree that this WIL component is sometimes very insufficient in assisting the student teacher to develop their own footing and voice as a teacher. This is the 'gap' that this research book addresses. Most of the chapters in the book report empirical data, with the exception of two chapters that can be categorized as systematic reviews. WIL is addressed from various angles in the chapters. Chapter 6 focuses on research related to what makes Finnish teacher education so effective, and in Chapter 4 researchers of the University of Johannesburg disseminate their findings on establishing a teaching school (based on Finnish insights) in Johannesburg. Chapter 3 highlights the challenges faced in open-and distance learning teacher education contexts. Several of the chapters disseminate research findings on alternative interventions to classic WIL, namely, where "safe spaces" or laboratories are created for student teachers to learn and grow professionally. These could either be simulations, such as software programmes and avatars in the intervention described in Chapter 2; student excursions, as the findings in chapters 5, 7 and 10 portray; or alternative approaches to WIL (e.g. Chapters 11 and 12). The book is devoted to scholarship in

the field of pre-service teacher education. The target audience is scholars working in the fields of pre-service teacher education, work-integrated learning, and self-directed learning. The book makes a unique contribution in terms of firstly its extensive use of Cultural-Historical Activity Theory as a research lens, and secondly in drawing on various theoretical frameworks. Both quantitative and qualitative research informed the findings of the book. This book is for upper-level students, managers and academics who are interested in exploring the messy reality of the contemporary workplace and in considering how things might be done differently. In particular, it offers a critical perspective on

The Second Edition of *An Introduction to Child Development* has been fully updated to provide a comprehensive survey of the main areas of child development, from infancy through to adolescence. Equipping students with an appreciation of critical issues in the field and an understanding of empirical research that bears on the study of children, the text provides balanced coverage of topics and theoretical perspectives that represent both classic and cutting edge work in child development. In terms of new content, it now covers more on the biological foundations of development, plus new chapters on moral development and applied developmental psychology. The Second Edition includes the following features: - learning points - section & chapter summaries, - end-of-chapter glossaries - suggestions for further reading - sample multiple choice questions - sidebars featuring in depth discussions of key research findings or points of debate within the field of child development. The text comes with a dedicated website with resources for both students and instructors.

Addressing the increasing number of culturally and linguistically diverse students in today's schools, *Behavior and Classroom Management in the Multicultural Classroom*, by Terry L. Shepherd and Diana Linn, provides general and special education teachers with the knowledge, skills, and strategies to make the proactive, active, and reactive interventions necessary to create a positive classroom environment in which all students can learn. Going beyond the traditional rules and hierarchy of consequences and reinforcements, the book demonstrates how to incorporate basic classroom management plans, functional behavioral analysis, functional behavioral assessments, and behavioral intervention plans into the development and implementation of response-to-intervention and school-wide positive behavior support programs. In every chapter, the authors use real world examples and case studies to explore how language and culture affect

students' responses to behavior and classroom management. Unique chapters cover social skills training and collaborating with families of diverse students.

Management Accounting is part of the celebrations to mark CIMA 's 90th anniversary in 2009. It looks at the development of cost and management accounting from the founding of the Institute to today. It considers a number of immediate challenges to management accountants and surveys a range of issues and challenges that will likely affect management accounting thought and practice in the future. The authors examine the possibilities for accountants to widen their focus and become more familiar with the enterprise technology determining their organisations ' cost structures and with the effects of multiple production in various locations, such as economies or diseconomies of scale. Such change may require the alteration of traditional cost models used by accountants to become more nuanced. The book suggests how this may be accomplished and highlights the need for management accountants to work as part of management teams throughout the organisation as

business partners rather than remain grounded in specialist information provision roles. Alnoor Bhimani is Professor of Management Accounting at the London School of Economics. He is also a Certified Management Accountant as well as an author of 15 books and over 100 articles. Michael Bromwich was CIMA 's Professor of Accounting and Financial Management at the London School of Economics and Political Science (1985 to 2006), now Emeritus. He is a Past President of CIMA (1987/88) and currently serves on CIMA 's Technical Committee. It is conceptually clear and jargon-free, which is extraordinary among books on administrative ethics."—H. Research in macroeconomics in the last thirty years has featured, almost exclusively on two characteristics: an emphasis on the microfoundations of macroeconomics and secondly, intertemporal economics, that is, the behavior of economic actors over time. Curiously, textbooks in intermediate macroeconomics have been very slow to adopt these traits. The aim of this book is to bring intermediate instruction in macroeconomics fully into line with the direction taken by the research community. Key hallmarks of the text include: a full introduction to the microfoundations of consumption and investment a complete model of the labor market with profit maximization for firms to determine labor demand and

utility maximization model to determine labor supply an analysis of the Baumol-Tobin model to determine money demand accompanied by a discussion of traditional money supply Possessing a full range of additional learning features including a companion website, test bank and instructor's manual, the book takes an international view of macroeconomics with case studies and examples from the United States and beyond.
