Since the radio signature of our own Milky Way was detected in 1931, galaxies have been observed from ultra-high energy gamma rays to long wavelength radio waves, providing fundamental insights into their formation, evolution and structural components. Unveiling the secrets of some of the best-observed galaxies, this atlas contains an electromagnetic spectrum. The accompanying text explains why we see the component stars, gas and dust through different radiation processes, and describes the telescopes and instruments used. This atlas is a valuable reference resource on galaxies for students seeking an overview of multiwavelength observations and what they tell us about galaxy evolution.

"Just Play Naturally" by Vivien Mackie, in conversation with Joe Armstrong, goes very deep into the creative process by recounting the steps by which Pablo Casals taught Mackie, as a young woman, to go beyond all her formal training in order to become a real musician, and it goes on to show how an artist, in this case a performing artist, may continue going deeper all the rest of her life. The dialogue between Vivien the cellist and Joe the flautist, both of whom are skilled an devoted teachers of the Alexander Technique, could profit any practitioner of the arts, but it penetrates beyond art into life itself. This book illustrates the evolution of a sense of rhythm, of a connection to the breath, of the ways in which the self combines the resources of the mind and the body, of motion and stillness, of pitch and meter. Even more than the above, this book tells how to change your life, how to get in touch with the reality beneath learned experience.' Peter Davison, Poet, Editor 'I find Just Play Naturally' extraordinary moving - and important account of artistic disciplines, dedication, communion - as well as a deepening revelation of the Alexander Technique.' Rosanna Warren, Poet, Professor of Comparative Literature, Boston University 'I think that this is a most valuable addition to the list of books concerning the F. Matthias Alexander Technique. It describes the experiences encountered by an accomplished musician in making practical application of the Technique, but it also reveals the extent to which one of the greatest musical artists of our time, Pablo Casals, thought and worked in accordance with the similar principles. Readers will learn much from this book about an approach to study and performance from which all students could benefit.' W.H.M. Carrington, Master Teacher of the Alexander Technique, London

Through a comprehensive analysis of sixteen European legal systems, based on an assessment of national answers to a factual questionnaire, Causation in European Tort Law sheds light on the operative rules applied in each jurisdiction to factual and legal causation problems. It highlights how legal systems' features impact on the practical role that causation is called upon to play, as well as the arguments of professional lawyers. Issues covered include the conditions under which a causal link can be established, rules on contribution and apportionment, the treatment of supervening, alternative and uncertain causes, the understanding of loss-of-a-chance cases, and the standard and the burden of proving causation. This is a book for scholars, students and legal professionals alike. A university professor. A restaurateur. A Hollywood leading man. The Mackie Men of New Orleans have made success a family tradition. In A View from the Roof, Presidential Award-winning speaker Dr. Calvin Mackie reveals just how they did it. Through a slideshow of poignant stories involving the Mackie brothers' tough-as-nails roofer dad Willie, readers will learn the hands-on, humorous lessons that propelled Calvin and his brothers to the top of their professions. From the hot gable rooftops of New Orleans to the set of a Spike Lee film, this book will leave readers with a view they'll always remember.

The Topics Every Medical Physicist Should Know
Tutorials in Radiotherapy Physics: Advanced Topics with Problems and Solutions covers selected advanced topics that are not thoroughly discussed in any of the standard medical physics texts. The book brings together material from a large variety of sources, avoiding the need for you to search through and digest the vast research literature. The topics are mathematically developed from first principles using consistent notation. Clear Derivations and In-Depth Explanations The book offers insight into the physics of electron acceleration in linear accelerators and presents an introduction to the study of proton therapy. It then describes the predominant method of clinical photon dose computation: convolution and superposition dose calculation algorithms. It also discusses the Boltzmann transport equation, a potentially fast and accurate method of dose calculation that is an alternative to the Monte Carlo method. This discussion considers Fermi-Eyges theory, which is widely used for electron dose calculations. The book concludes with a step-by-step mathematical development of tumor control and normal tissue complication probability models. Each chapter includes problems with solutions given in the back of the book. Prepares You to Explore Cutting-Edge Research This guide provides you with the foundation to read review articles on the topics. It can be used for self-study, in graduate medical physics and physics residency programs, or in vendor training for linacs and treatment planning systems.

Qualitative Research in Education: A User's Guide, Third Edition continues to bring together the essential elements of qualitative research, including traditions and influences in the field and practical, step-by-step coverage of each stage of the research process. Synthesizing the best thinking on conducting qualitative research in education, Marilyn Lichtman uses a conversational writing style that draws readers into the excitement of the research process. This second edition of the Oxford Handbook of Free Will is intended to be a sourcebook and guide to current work on free will and related subjects. Its focus is on writings of the past forty years, in which there has been a resurgence of interest in traditional issues about the freedom of the will in the light of new developments in the sciences, philosophy and humanistic studies. Special attention is given to research on free will of the first decade of the twenty-first century since the publication of the first edition of the Handbook. All the essays have been newly written or rewritten for this volume. In addition, there are new essays and essays surveying topics that have become prominent in debates about free will in the past decade, including new work on the relation of free will to physics, the neurosciences, cognitive science, psychology and empirical philosophy, new versions of traditional views (compatibilist, incompatibilist, libertarian, etc.) and new views (e.g., revisionism) that have emerged. The twenty-eight essays by prominent international scholars and younger scholars cover a host of free will related issues, such as moral agency and responsibility, accountability and blameworthiness in ethics, autonomy, coercion and control in social theory, criminal liability, responsibility and punishment in legal theory, issues about the relation of mind to body, consciousness and the nature of action in philosophy of mind and the cognitive and neurosciences, questions about divine foreknowledge, providence and human freedom in philosophy of religion, and general metaphysical questions about necessity and possibility, determinism, time and chance, quantum reality, causation and explanation.

International IDEA Handbook on Democracy Assessment

A darkly humorous debut novel that follows a cunning antihero as she gets her revenge When I think about what I actually did, I feel somewhat sad that nobody will ever know about the complex operation that I undertook. Getting away with it is highly preferable, of course, but perhaps when I'm long gone, someone will open an old safe and find this confession. The public would reel. After all, almost nobody else in the world can possibly understand how someone, by the tender age of 28, can have calmly killed six members of her family. And then happily got on with the rest of her life, never to regret a thing. When Grace Bernard discovers her absentee millionaire father has rejected her dying mother's pleas for help, she vows revenge and coldly sets out to get her retribution—by killing them all, one by one. Compulsively readable, Bella Mackie's debut novel is driven by a captivating first-person narrator who talks of "self-care" and social media while calmly walking the reader through her increasingly baroque acts of murder. But then, Grace is imprisoned for a murder she didn't commit. Outrageously funny, compulsive, and subversive, How to Kill Your Family is a wickedly dark romp about class, family, love . . . and murder.

An insight into moral skepticism of the 20th century. The author argues that our every-day moral codes are an 'error theory' based on the presumption of moral facts which, he persuasively argues, don't exist. His refutation of such facts is based on their metaphysical 'queerness' and the observation of cultural relativity.
