*Macroeconomics, First Canadian Edition, Pearson Canada*

*The Routledge Handbook of Heterodox Economics presents a comprehensive overview of the latest work on economic theory and policy from a 'pluralistic' heterodox perspective. Contributions throughout the Handbook explore different theoretical perspectives including: Marxian-radical political economics; Post Keynesian-Sraffian economics; institutionalist-evolutionary economics; feminist economics; social economics; Régulation theory; the Social Structure of Accumulation approach; and ecological economics. They explain the structural properties and dynamics of capitalism, as well as propose economic and social policies for the benefit of the majority of the population. This book aims, firstly, to provide realistic and coherent theoretical frameworks to understand the capitalist economy in a constructive and forward-looking manner. Secondly, it delineates the future directions, as well as the current state, of heterodox economics, and then provides both 'heat and light' on controversial issues, drawing out the commonalities and differences among different heterodox economic approaches. The volume also envisions transformative economic and social policies for the majority of the population and explains why economics is, and should be treated as, a social science. This Handbook will be of compelling interest to those, including students, who wish to learn about alternative economic theories and policies that are rarely found in conventional economics textbooks or discussed in the mainstream media, and to critical economists and other social scientists who are concerned with analyzing pressing socio-economic issues.*

*Macroeconomics, First Canadian Edition offers a new approach to this subject. Drawing upon their vast experience in teaching and research, the authors have written an intermediate macroeconomics book that sets the standard for books in this third millennium. Delong provides a streamlined presentation of material, traditional and modern, resulting in a more understandable and comprehensive book. This edition features five changes to the standard presentation of modern macroeconomics: -Provide a more*

*student-friendly way of learning growth theory -Provide sufficient coverage of growth facts so that students learn the how and why of both growth over time and growth across countries. -Treat the economy as open from the beginning of the book. -Deal with interest rates, not money stocks. -Increased focus on the Phillips curve. These changes, while not radical are shifts in emphasis and changes of focus. They do not require recasting of courses, but they are very important in bringing the organization of the book into line with what students learning macroeconomics today need to know.*

*Fill-in questions; multiple-choice questions; exercises guide; problems; questions to think about; data questions.*

In *A History of Canadian Economic Thought*, Robin Neill relates the evolution of economic theory in Canada to the particular geographical and political features of the country. Whilst there were distinctively Canadian economic discourses in nineteenth-century Ontario and early twentieth-century Quebec, Neill argues that these have now been absorbed into the broader North American mainstream. He also examines the nature and importance of the staple theory controversy and its appositeness for the Canadian case. With full accounts of the work of major Canadian economists including John Rae, H.A. Innis and Harry Johnson, *A History of Canadian Economic Thought* is the first definitive treatment of the subject for 30 years.

*Economics for Life: Smart Choices for You* offers a new approach to learning and teaching economics that demonstrates the relevance of economics to students. Accessible language, a non-mathematical approach and use of practical examples connects economics to students' lives in a meaningful way. This text will teach students about economics, unlike traditional texts, that teach how to be an economist. An exploration of the macroeconomic aspects of economic growth, business cycles, and monetary and trade policy "Macroeconomics" explains how recent tax cuts have combined with the war on terrorism and slow economic growth to contribute to increasing budget deficits. Also included are discussions of international trade policy, comparative advantage, and outsourcing, as well as valuable Web access to more than 250 minutes of new videos from Paul Solman of the "Lehrer NewsHour."

This book challenges the mainstream paradigm, based on the inter-temporal optimisation of welfare by individual agents. It introduces a methodology for studying how institutions create flows of income, expenditure and production together with stocks of assets and liabilities, thereby determining how whole economies evolve through time.

Important lessons in economic policy in developing nations are provided here as contributors evaluate the effectiveness of various domestic scenarios and the recommendations of international organizations such as the World Bank. Their findings highlight the issue of inadequate social capability as a critical factor in understanding the lack of economic development in many developing countries. They suggest that contemporary theory tends to pinpoint necessary but insufficient conditions for the successful implementation of development strategies for these countries.

The Routledge Handbook of the History of Global Economic Thought offers the first comprehensive overview of the long-run history of economic thought from a truly international perspective. Although globalization has facilitated the spread of ideas between nations, the history of economics has tended to be studied either thematically (by topic), in terms of different currents of thought, or individually (by economist). Work has been published in the past on the economic thought traditions of specific countries, but this pioneering volume is unique in offering a wide-ranging comparative account of the development of economic ideas and philosophies on the international stage. The volume brings together leading experts on the development of economic ideas from across the world in order to offer a truly international comparison of the economics within nation-states. Each author presents a long-term perspective on economics in their region, allowing global patterns in the progress of economic ideas over time to be identified. The specially commissioned chapters cover the vast sweep of the history of economics across five world regions, including Europe (England, Scotland, Ireland, Italy Greece, Spain, Portugal, Germany, Sweden, Russia and the Ukraine), the Americas (the USA, Canada, Mexico and Central America, Spanish-Speaking South America, Brazil and the Caribbean), the Middle East (Turkey, Israel, Arab-Islamic Economics, Persia/Iran, North Africa), Africa (West Africa, Southern Africa, Mozambique and Angola), and the Asia-Pacific Region (Australia and New Zealand, China, Southeast Asia, the Asian Tigers, India.) This rigorous, ambitious and highly scholarly volume will be of key interest to students, academics, policy professionals and to interested general readers across the globe.
