Improve YOUR world. Dean Karlan and Jonathan Morduch's Macroeconomics 3e is built around the central concept that economics is a powerful and positive tool that students can use right now to improve their world. Macroeconomics uses examples and issues that resonate with students' experience to draw them in and frame ideas to help develop their economic intuition. - Using a balanced approach, students are able to sharpen their own understanding of topics by focusing on the data and evidence behind the effects they see. Students are equipped to understand and respond to real-life situations through their new economic lens and challenged to decide how they

Students and faculty will find content that breaks down barriers between what takes place in the classroom and what happens in our nation and our world, with applications that are driven by empirical evidence, data, and research. - Karlan and Morduch show students that economics is a tool to improve one's own life and promote better public and business policies in the world. state of contemporary knowledge production. Answering the question “What is digital humanities?,” it provides an in-depth examination of an emerging field. This collaboratively authored and visually compelling volume explores methodologies and techniques unfamiliar to traditional modes of humanistic inquiry—including geospatial analysis, data mining, corpus linguistics, visualization, and simulation—to show their relevance for contemporary culture. Written by five leading practitioner-theorists whose varied backgrounds embody the intellectual and creative diversity of the field, *Digital Humanities* is a vision statement for the future,

an invitation to engage, and a critical tool for understanding the shape of new scholarship. With this edition, Eric Chiang begins a new era for his acclaimed principles of economics textbook. Formerly CoreEconomics and now titled Economics: Principles for a Changing World, the new edition is thoroughly contemporary, fully integrated print/technology resource that adapts to the way you want to teach. As always, this concise book focuses on the topics most often covered in the principles course, but with this edition, it offers a stronger emphasis than ever on helping students apply an economic way of thinking to the overwhelming flow of data we face every day.

Economics: Principles for a Changing World is fully informed by Eric Chiang's experiences teaching thousands of students worldwide, both in person and online. Developing the text, art, media, homework, and ancillaries simultaneously, Chiang translates those experiences into a cohesive approach that embodies the book's founding principles: To use technology as a tool for learning—before lectures, during class, when doing homework, and at exam time To help students harness the data literacy they'll need as consumers of economic information To provide a truly global perspective, showing the different ways people around the world confront economic

economics. There used to be a time when leading economists, or their students, established or led statistical offices and took care that the measurements were consistent with the theory (and vice versa). Not anymore. Macroeconomic theorists and macroeconomic statisticians do not even speak the same language any longer. They do use the same words, such as 'consumption', 'investments' or 'unemployment' but the meanings can often be different. This book maps

the differences between macroeconomic theory and measurement and explores them in some detail while also tracking their intellectual, historical and, in some cases, ideological origins. It also explores the possible policy implications. In doing so, the book draws on two separate strands of literature which are seldom used in unison: macro-statistical manuals and theoretical macro-papers. By doing so, the book contributes to the effort to bridge the gap between them without compromising on the idea that a

meaningful science of economics should, in the end, be based upon individual people and households and their social and cultural embedding instead of a 'representative consumer', or Robinson Crusoe figure. This work is essential reading for students, economists, statisticians, and professionals.

Learning through Repetition: Important tools appear over and over again, allowing students to learn from repetition and to see how one framework can be useful in many different contexts.
