As we enter the 21st Century, new communication technologies are being introduced at an astonishing rate. Making sense of these technologies is becoming more difficult. Communication Technology Update is the single source for the latest developments, trends, and issues in communication technology. Now in its fifth edition, Communication Technology Update has become an indispensable information resource for business, government, and academia. The latest edition of this review of the state-of-the-art in communication technologies includes a number of refinements to make the text more user-friendly. The book continues to provide the latest information on electronic mass media, computers, consumer electronics, satellites, and telephony. Information on similar technologies has been concentrated into a smaller number of chapters to make it easier to compare history, revenues, technical descriptions, and user information across technologies. The new edition also has a companion home page on the World Wide Web at <http://www.tfi.com/ctu/> that will provide updated information as it is submitted by readers. Persons familiar with specific technologies will be invited to send periodic updates for the Web page. The Communication Technology Update Home Page also offers links to other Internet resources, as well as a listing of trade organizations and publications covering all areas of communication technology. Other additions to the text are a Statistical Abstract of Communication Technologies, providing year-by-year statistics on dozens of communication technologies, a new chapter on broadcast television, and a more complete glossary. August E. Grant is Associate Professor and Area Head of Communication Technology and Policy in the Department of Radio-Television-Film at the University of Texas at Austin. Dr. Grant is a broadcaster-turned-academic, with an interest in the evolution of mass media and their audiences. Specializing in audience behavior and new communication technologies, he also serves as a consultant to various media organizations. Technology Futures, Inc. (TFI) specializes in technology forecasting, projecting the rate of technological progress, the market needs for new technologies, the rate of new technology adoption, and the impacts of technology. These forecasts are used for addressing practical business problems in technology management, finance, marketing, and strategic planning. TFI shares it expertise through consulting, research, seminars, and publications. TFI is based in Austin, Texas, with clients throughout North America and the world. TFI is also the publisher of the innovative research journal, *New Telecom Quarterly*.

Whether you are an MIS Director, a systems administrator or simply a PC user with an interest in networks, you will find valuable information and insights into the ins and outs of PC networking in this comprehensive handbook. Every important networking concept, technology, and piece of equipment is thoroughly examined, and helpful tips on essentials such as layout, wiring, protocols, and the selection of software and hardware are included.

There have been unprecedented developments in the field of informatics in recent years. Since 1994, more computers than automobiles are sold in North America. Computer capacity doubles every eighteen months, and finding terms to identify the hundreds of new hardware and software products and peripherals as well as their functions is now an unending task. The Informatics Glossary is intended for use by all those interested in obtaining terminological information on the increasing number of new concepts in the field. Translators, writers, suppliers, technicians and customers will all find this publication to be a reliable source of information for correct terminological usage in informatics.

The Manager's View

Local Area Networks

These days, networks and information systems are more than just technological service segments of a company. They are vital variables in the business equation. This book takes a business-first approach to networks, focusing on how to analyze, implement and manage local area networks. Drawing on extensive case studies, it provides a thorough examination of the business application, data, network, and technology issues surrounding the successful implementation of local area network-based client/server systems. It also provides working models readers can use to organize their own systems.

PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology.

Government Reports Annual Index: Keyword A-L

Few issues in high technology are as divisive as the raging debate over competition, innovation, and antitrust. Why do certain products and technologies become dominant while others fail? Is there something about high technology that makes markets less dependable at choosing goods and services? Will the robust competition and technological advances of the past two decades continue? Or, will they be suffocated by larger firms employing monopolistic practices? Is antitrust primarily employed against monopolies to increase competition for the benefit of consumers, or is it actually a vehicle that firms use against their rivals to restrict the competitive process? This book examines these and other questions confronting high-technology markets.
