

Management Information System Laudon 13th Edition

This book presents a selection of papers from the 2017 World Conference on Information Systems and Technologies (WorldCIST'17), held between the 11st and 13th of April 2017 at Porto Santo Island, Madeira, Portugal. WorldCIST is a global forum for researchers and practitioners to present and discuss recent results and innovations, current trends, professional experiences and challenges involved in modern Information Systems and Technologies research, together with technological developments and applications. The main topics covered are: Information and Knowledge Management; Organizational Models and Information Systems; Software and Systems Modeling; Software Systems, Architectures, Applications and Tools; Multimedia Systems and Applications; Computer Networks, Mobility and Pervasive Systems; Intelligent and Decision Support Systems; Big Data Analytics and Applications; Human–Computer Interaction; Ethics, Computers & Security; Health Informatics; Information Technologies in Education; and Information Technologies in Radiocommunications.

A guide full of practical hints to help build the confidence of graphics and typography students. Its aim is to bring the reader to the point where they understand the basic principles of typography and to strengthen the designer's 'eye' through informed, direct observation.

This comprehensive compendium is about managing information systems and focuses on relationships between information, information systems, people and business. The impacts, roles, risks, challenges as well as emerging trends of information systems are an important element of the book. Essential and critical information systems management skills including using information systems for competitive advantages, planning and evaluating information systems, developing and implementing information systems, and managing information systems operation form a critical part of this unique reference text. Current topics like digital platforms, agile organization, DevOPs, blockchain, 5G, data center and quantum computing prove indispensable for readers who want to stay in the forefront of today's complex information systems.

This book contains the papers presented at the 4th International Conference on Practical Aspects of Knowledge Management organized by the Department of Knowledge Management, Institute of Informatics and Business Informatics, University of Vienna. The event took place on 2002, December 2–3 in Vienna, Austria. The PAKM conference series is a forum for people to share their views, to exchange ideas, to develop new insights, and to envision completely new kinds of solutions to knowledge management problems, because to succeed in the accelerating pace of the "Internet age," organizations will be obliged to efficiently leverage their most valuable and underleveraged resource: the intellectual capital of their highly educated, skilled, and experienced employees. Thus next-generation business solutions must be focussed on supporting the creation of value by adding knowledge-rich components as integral parts in the work process. The authors, who work at the leading edge of knowledge management, have pursued integrated approaches which consider both the technological side, and the business side, and the organizational and cultural issues. We hope the papers, covering a broad range of knowledge management topics, will be valuable, at the same extent, for researchers and practitioners developing knowledge management approaches and applications. It was a real joy seeing the visibility of the conference increase and noting that knowledge management researchers and practitioners from all over the world submitted papers. This year, 90 papers and case studies were submitted, from which 55 were accepted.

Recent Advances in Information Systems and Technologies

in The Digital Age

Ten Essential Topics

Managing the Digital Firm

Global Supply Chain and Operations Management

An Integrated Approach to Supply Chain Management and Operations

For introductory courses in Information Systems or Management Information Systems. Connect essential MIS concepts to everyday life Essentials of MIS is an in-depth look at how today's businesses use information technologies and systems to achieve their corporate objectives. Current real-world business cases illustrate how companies have identified, and ultimately solved, key business challenges using information systems and technologies. Through the use of Essentials of MIS, you will be able to participate in, and even lead, management discussions of information systems for a firm. The 13th Edition consists of 12 chapters with hands-on projects that cover the most essential topics in MIS. In addition to the core text, this edition includes a Video Case Package consisting of 28 video case studies and 10 instructional videos to illustrate business uses of information systems, explain new technologies, and explore concepts. The knowledge and information in this book will be most valuable throughout your business career. Also available with MyLab MIS MyLab(tm) is the teaching and learning platform that empowers you to reach every student. By combining trusted author content with digital tools and a flexible platform, MyLab personalizes the learning experience and improves results for each student. And, with Decision-Making Mini Simulations and Auto-Graded Excel and Access Projects, students learn how MIS concepts will help them succeed in their future careers. Note: You are purchasing a standalone product; MyLab does not come packaged with this content. Students, if interested in purchasing this title with MyLab MIS, ask your instructor for the correct package ISBN and Course ID. Instructors, contact your Pearson representative for more information. If you would like to purchase both the physical text and MyLab MIS search for: 0134854438 / 9780134854434 MyLab MIS with Pearson eText for Essentials of MIS -- Access Card Package, 13/e Package consists of: 0134802756 / 9780134802756 Essentials of MIS, 13/e 0134803078 / 9780134803074 MyLab MIS with Pearson eText -- Access Card -- for Essentials of MIS Advances in Computer and Information Sciences and Engineering includes a set of rigorously reviewed world-class manuscripts addressing and detailing state-of-the-art research projects in the areas of Computer Science, Software Engineering, Computer Engineering, and Systems Engineering and Sciences. Advances in Computer and Information Sciences and Engineering includes selected papers from the conference proceedings of the International Conference on Systems, Computing Sciences and Software Engineering (SCSS 2007) which was part of the International Joint Conferences on Computer, Information and Systems Sciences and Engineering (CISSE 2007).

For a thorough, timely, and distinctly effective overview of how information systems are being used in the health care industry today, turn to HEALTH MANAGEMENT INFORMATION SYSTEMS: Methods and Practical Applications, Second Edition. Skillfully revised for both content and format, this exceptional teaching and learning tool gives students a solid command of vital information to set them on the path to professional success. Each chapter opens with a scenario that introduces students to a particular HMIS problem to be understood and overcome; new emphasis on application aids in helpful understanding to readers; graphics and tables throughout the text illustrate concepts for fast comprehension; plus, five major cases based on real-life experience.

The dynamic and turbulent second half of the 20th century, as well as the beginning of the 21st century, have been and still are accompanied by factors relating to information in one or other way: information technologies (IT), information systems (IS), information society, information economy and others. The technical foundation of these factors – the contemporary information technologies – became widely adopted, accessible to many users, and keep being perfected in terms of their functions and performance. IT developments have been followed by substantial value expectations that largely drive the IT industry as one of the most dynamic industries in the world. It is hard to underestimate the value created by IT applications, especially when an insightful use of IT has provided its users with opportunities that had been unheard of just a short time ago. On the other hand, the history of IT use brings out numerous cases that are not too successful, and from the time perspective, we can state that a wide application of IT does not automatically guarantee the creation of more value or efficient activities, regardless of proven potential. Apart from this, the role of IT in the life of contemporary society develops some controversial features: considering that information activities demand more and more time and attention that are rather scarce resources in the activities of a society member, the use of said resources is far from efficient. It has to be noted that this book discusses information needs and the role of information technologies in satisfying them. Although information issues are often discussed in relation to knowledge issues, and many sources point out that the two are closely related, this book does not discuss either the definition of knowledge or knowledge management, with the exception of several inevitable touch points. Business information activities and information functions often are considered secondary to the main activities, but actually they are a vital binding environment for any rational activities. Information has been important for all activities and at all times; nevertheless, its role received deeper and more focused research only with the proliferation of computer information technologies. The area of IT use and servicing of information needs is rather complicated and requires substantial knowledge and competence. The amount of experience accumulated in the field is huge; however, part of it has a short life cycle due to the rapid advance of information technologies. It is no easy task to search the kaleidoscopic variety of IT application problems for solid reference points that would hold over time. The monograph presents an assumption that the search for such reference points should start in the area of user information needs. The area of satisfying information needs, and business information needs in particular, has merited research interest for a long time and in many aspects. A number of important sub-areas has developed over time: management information systems, data and information management, information strategy, decision support, business intelligence, information economy, etc. It is worth noting that in the area of satisfying complex information needs, for some time principal attention has been given to the topics of decision support, decision modeling, and expert systems. Over time, other topics came in to replace them, namely, business intelligence, although it would be fair to note that current research in business intelligence and related fields largely owes to the previous foundation work of decision support researchers. Regardless of the vast number of research publications, the research space lacks work that is centered around an information user (a person, a group, an entire organization) and the projection of user information needs into the potential of information technologies and systems.

Reach every student by pairing this text with MyLab MIS MyLab(tm) is the teaching and learning platform that empowers you to reach every student. By combining trusted author content with digital tools and a flexible platform, MyLab personalizes the learning experience and improves results for each student. And, with Decision-Making Mini Simulations and Auto-Graded Excel and Access Projects, students learn how MIS concepts will help them succeed in their future careers.

With advancing information technology, businesses must adapt to more efficient structures that utilize the latest in robotics and machine learning capabilities in order to create optimal human-robot cooperation. However, there are vital rising concerns regarding the possible consequences of deploying artificial intelligence, sophisticated robotic technologies, automated vehicles, self-managing supply modes, and blockchain economies on business performance and culture, including how to sustain a supportive business culture and to what extent a strategic fit between human-robot collaboration in a business ecosystem can be created. The Handbook of Research on Strategic Fit and Design in Business Ecosystems is a collection of innovative research that builds a futuristic view of evolving business ecosystems and a deeper understanding of business transformation processes in the new digital business era. Featuring research on topics such as cultural hybridization, Industry 4.0, and cybersecurity, this book is ideally designed for entrepreneurs, executives, managers, corporate strategists, economists, IT specialists, IT consultants, engineers, students, researchers, and academicians seeking to improve their understanding of future competitive business practices with the adoption of robotic and information technologies.

Using the same approach, this text provides a distillation of the widely popular Legal Aspects of Health Care Administration. It presents an overview of health law topics in an interesting and understandable format, leading the reader through the complicated maze of the legal system. The topics presented in this book create a strong foundation in health law. This book is a sound reference for those who wish to become more informed about how the law, ethics, and health care intersect. Features: A historical perspective on the development of hospitals, illustrating both their progress and failures through the centuries. Actual court cases, state and federal statutes, and common-law principles are examined. A broad discussion of the legal system, including the sources of law and government organization. A basic review of tort law, criminal issues, contracts, civil procedure and trial practice, and a wide range of real life legal and ethical dilemmas that caregivers have faced as they wound their way through the courts. An overview of various ways to improve the quality and delivery of health care.

Undergraduate course in Entrepreneurship and New Venture creation. Entrepreneurship 2/e takes students on the entire journey of launching a new venture, with a unique emphasis on the front end of the entrepreneurial process.

Recent advancements in data collection will affect all aspects of businesses, improving and bringing complexity to management and demanding integration of all resources, principles, and processes. The interpretation of these new technologies is essential to the advancement of management and business. The Handbook of Research on Expanding Business Opportunities With Information Systems and Analytics is a vital scholarly publication that examines technological advancements in data collection that will influence major change in many aspects of business through a multidisciplinary approach. Featuring coverage on a variety of topics such as market intelligence, knowledge management, and brand management, this book explores new complexities to management and other aspects of business. This publication is designed for entrepreneurs, business managers and executives, researchers, business professionals, data analysts, academicians, and graduate-level students seeking relevant research on data collection advancements.

NOTE: You are purchasing a standalone product; MyMISLab does not come packaged with this content. If you would like to purchase both the physical text and MyMISLab search for ISBN-10 :013405847X/ISBN-13: 9780134058474 . That package includes ISBN-10: 0133898164/ISBN-13: 9780133898163 and ISBN-10: 0133974529/ ISBN-13: 9780133974522 . For undergraduate and graduate Management Information Systems courses. An in-depth exploration of how businesses successfully manage information In its Fourteenth Edition , Management Information Systems: Managing the Digital Firm continues to define courses in Management Information Systems. Designed for business school students, the text provides insight into how today's businesses leverage information technologies and systems to achieve corporate objectives. Providing comprehensive and integrative coverage of essential new technologies and information system applications, as well their impact on business models and managerial decision-making, Management Information Systems increases student engagement and enhances learning through vivid examples. In this new edition, students will find the most up-to-date, relevant information about information systems used by today's businesses-capturing students' attention no matter their industry or vertical of interest. With the help of this text, students will build skills sought after in today's workplace. Later on, they will be able to understand, participate in, and eventually lead management discussions and drive decisions about their firm's information systems. Also available with MyMISLab MyMISLab is an online homework, tutorial, and assessment program designed to work with this text to engage students and improve results. Within its structured environment, students practice what they learn, test their understanding, and pursue a personalized study plan that helps them better absorb course material and understand difficult concepts.

For undergraduate and graduate courses in business. Understanding The Vast And Expanding Field of E-Commerce Laudon's E-Commerce 2016: Business, Technology, Society emphasizes three driving forces behind the expanding field of e-commerce: technology change, business development, and social issues. A conceptual framework uses the templates of many modern-day companies to further demonstrate the differences and complexities in e-commerce today. An in-depth investigation of companies such as Uber, Pinterest, and Apple kick-off the course while preparing students for real-life scenarios. In the Twelfth Edition, Laudon and Traver add new or update existing case studies to match developments in the e-commerce field as they exist in today's tech world. They built in additional video cases for each chapter, making the material even more accessible to students as they prepare for their future roles in business.

Essentials of MIS, Global Edition

Drawing from the latest developments and practices from the field, MANAGEMENT INFORMATION SYSTEMS, 7e provides a clear emphasis on the business and management elements of information technology. The book offers the most current coverage available, including expanded discussions of social networking, IT security, mobile computing, and much more. From overviews of the information age to online business and business intelligence, readers gain a sound balance of the technical and business elements of information technology. In addition, numerous business cases integrated throughout enable readers to apply what they learn to real-world practice--equipping them with skills they can immediately put into action in the business world. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

This proceedings volume brings together the results of a corporate discussion on research, academic teaching and education in the field of business and economics in the context of globalization. The contributions examine leadership and sustainability, quality and governance and the internationalization of higher education. With a particular focus on business education and business schools, the book discusses the labor market and modernization as well as contemporary trends and challenges. By including both academic papers and contributions from industry, it forges research links between academia, business and industry.

Information is considered both an essential element of organizational design and an asset to be processed and managed. Further research on and application of topics relating to the architecture, management, and use of information is imperative to organizational success. The Handbook of Research on Information Architecture and Management in Modern Organizations focuses on information as an essential element of organizational design and emphasizes the strategic role of knowledge transfer and management in organizations across industries. Taking a cross-disciplinary approach to information architecture and management, this publication draws on research essential to diverse organizations and is designed for use by business professionals, researchers, academicians, and upper-level students. This comprehensive reference work features key research and concepts on topics related to information functionality, information modeling, information overload, information retrieval, innovation management, organizational architecture, informed governance, and relevant applications across industries.

For undergraduate and graduate MIS courses. This title is a Pearson Global Edition. The Editorial team at Pearson has worked closely with educators around the world to include content which is especially relevant to students outside the United States. This edition gives An in-depth look at how today's businesses use information technologies. Many businesses look for candidates who know how to use information systems, making a general understanding of information systems an asset to any business student. Laudon and Laudon continue to define the MIS course for all business majors by emphasizing how business objectives shape the application of new information systems and technologies. The ninth edition focuses on currency and cutting-edge topics.

Service Management

A continuing stream of information technology innovations is transforming the business world, in the Arab region and right around the globe. This text gives readers an in-depth look at how both local and international corporations harness information technology and systems to achieve corporate objectives. With a focus on providing students with engaging content that draws links between MIS theory and its application to real-life business scenarios, this text is an essential companion to any student of MIS in the Arab region.

Tie customer-driven strategies to service operations and process management, and sharpen your focus on creating customer value throughout your entire service organization! This comprehensive, multidisciplinary reference thoroughly covers today's most effective theories and methods for managing service organizations, drawing on innovative insights from economics, consumer behavior, marketing, strategy, and operations management. Leading experts Cengiz Haksever and Barry Render provide crucial insights into emerging service operation and supply chain topics, reinforcing key points with up-to-date case studies. Service Management contains a valuable chapter-length introduction to linear and goal programming and its services applications; and also addresses many other topics ignored by competitive texts, such as: Service SCM methods and approaches Focusing on customers and their service purchase behavior Service productivity Managing public and private nonprofit service organizations Vehicle routing and scheduling Ethical challenges to SCM Service Management will be an invaluable resource for senior and mid-level managers throughout any service organization, and for students and faculty in any graduate or upper-level undergraduate program in service management, service operations management, or operations management

An in-depth look at how today's businesses use information technologies. Many businesses look for candidates who know how to use information systems, making a general understanding of information systems an asset to any business professional. Laudon and Laudon continue to emphasize how business objectives shape the application of new information systems and technologies.

In the 2010s, new technological and business trends threaten, or promise, to disrupt multiple industries to such a degree that we might be moving into a new and fourth industrial revolution. The background and content of these new developments are laid out in the book from a holistic perspective. Based on an outline of the nature and developments of the market economy, business, global business industries and IT, the new technological and business trends are thoroughly dealt with, including issues such as internet, mobile, cloud, big data, internet of things, 3D-printing, the sharing economy, social media, gamification, and the way they transform industries and businesses

Essentials of Management Information Systems, 2/e, prepares students of the constantly changing demands of information systems management – first by relating MIS to management, the organization, and technology, focusing on the importance of integrating these elements; secondly by tracking emerging technologies and organizational trends; thirdly by consistently using examples taken from real businesses both domestic and foreign. The Second Edition explores the recent, rapid expansion of INTERNET related technologies and the impact they are having on how business is being done. The CD ROM-based Multimedia Edition offers all the text content, including figures, graphs, illustrations, and photos plus added multimedia dimensions of audio, video, animations, and an interactive study guide. Students may use the traditional text or the CD ROM independently or use the CD in conjunction with the text as a multi-media learning tool.

For introductory courses in Information Systems or Management Information Systems. *Essentials of MIS* is an in-depth look at how today's businesses use information technologies and systems to achieve their corporate objectives. Current real-world business cases illustrate how companies have identified, and ultimately solved, key business challenges using information systems and technologies. Through the use of *Essentials of MIS*, students will be able to participate in, and even lead, management discussions of information systems for a firm. The 14th Edition consists of 12 chapters with hands-on projects that cover the most essential topics in MIS, all updated with new figures, tables, and cases. In addition to the core text, this edition includes a Video Case Package consisting of 28 video case studies and 10 instructional videos to illustrate business uses of information systems, explain new technologies, and explore concepts. The knowledge and information in this book will be most valuable to students -- regardless of major -- throughout their business careers.

This book provides a holistic picture of the digital age as it emerges in the 2010s. On the background of business analysis concepts from firm to megatrends and all business sectors of the World, the digital age of information systems and digital drivers are thoroughly laid out.

This book describes the setup of digital enterprises and how to manage them, focusing primarily on the important knowledge and essential understanding of digital enterprise management required by managers and decision makers in organizations. It covers ten essential knowledge areas of this field: • Foundation of Digital Enterprise • Technology Foundation and Talent Management for Digital Enterprise • Digital Enterprise Strategy Planning and Implementation • B2C Digital Enterprise: E-tailing • B2C Digital Enterprise: E-Services • B2B Digital Enterprise and Supply Chain • Digital Platforms • Digital Marketing and Advertising • Digital Payment Systems • Mobile Enterprise Overall, this text provides the reader with the basics to understand the rapid development of digitization, facilitated by the dramatic advancements in digital technologies, extensively connected networks, and wider adoption of computing devices (especially mobile devices), as more and more organizations are realizing the strategic importance of digitization (e.g., sustainable growth of the organization, competitive advantage development and enhancement) and are embarking on digital enterprise.

Practical Aspects of Knowledge Management

The new fifth edition of Information Technology Control and Audit has been significantly revised to include a comprehensive overview of the IT environment, including revolutionizing technologies, legislation, audit process, governance, strategy, and outsourcing, among others.

This new edition also outlines common IT audit risks, procedures, and involvement associated with major IT audit areas. It further provides cases featuring practical IT audit scenarios, as well as sample documentation to design and perform actual IT audit work. Filled with up-to-date audit concepts, tools, techniques, and references for further reading, this revised edition promotes the mastery of concepts, as well as the effective implementation and assessment of IT controls by organizations and auditors. For instructors and lecturers there are an instructor's manual, sample syllabi and course schedules, PowerPoint lecture slides, and test questions. For students there are flashcards to test their knowledge of key terms and recommended further readings. Go to <http://routledgegetbooks.com/textbooks/9781498752282/> for more information.

Management Information Systems provides comprehensive and integrative coverage of essential new technologies, information system applications, and their impact on business models and managerial decision-making in an exciting and interactive manner. The twelfth edition focuses on the major changes that have been made in information technology over the past two years, and includes new opening, closing, and Interactive Session cases.

Adaptive Health Management Information Systems, Fourth Edition is a thorough resource for a broad range of healthcare professionals – from informaticians, physicians and nurses, to pharmacists, public health and allied health professionals – who need to keep pace the digital transformation of health care. Wholly revised, updated, and expanded in scope, the fourth edition covers the latest developments in the field of health management information systems (HMIS) including big data analytics and machine learning in health care; precision medicine; digital health commercialization; supply chain management; informatics for pharmacy and public health; digital health leadership; cybersecurity; and social media analytics.

Changing business environments and information technology advancements fundamentally reshaped the traditional information landscape in our contemporary society, urging companies to seek innovative ways to diffuse and manage assets on a global scale. It is crucial for society to understand the new methodologies and common practices that organizations can utilize to leverage their knowledge into practice. Global Information Diffusion and Management in Contemporary Society is an essential reference source featuring research on the development and implementation of contemporary global information management initiatives in organizations. Including coverage on a multitude of topics such as data security, global manufacturing, and information governance, this book explores the importance of information management in a global context. This book is ideally designed for managers, information systems specialists, professionals, researchers, and administrators seeking current research on the theories and applications of global information management.

Digital Business

Management Information Systems (Arab World Editions)

Essentials of MIS

Driven by such tools as big data, cognitive computing, new business models, and the internet of things, the overall demand for innovation is becoming more critical for competitiveness and emerging technologies. These technologies have become real alternatives for the market and offer new perspectives for modern project management applications. The *Handbook of Research on Emerging Technologies for Effective Project Management* is an essential research publication that proposes innovations for firms and markets through the exploration of project management principles and methods and the effective integration of knowledge and innovation. It encompasses academic and scientific propositions, reviews for conceptual bases, applications of theories in new market solutions, and cases of successful insertion of disruptive technologies and business models in new competitive market offers. Featuring a range of topics such as innovation management, business administration, and marketing, this book is ideal for project managers, IT specialists, software developers, executives, practitioners, managers, marketers, researchers, and industry professionals.

The 4th Edition of *Management Information Systems* promotes active learning like no other text in the market. Each chapter is comprised of tightly coupled concepts and section-level student activities that transport your students from passively learning about IS to doing IS in a realistic context.

Using broad but balanced coverage, this text analyzes advertising and content delivery capabilities of the Internet as well as its transactional ones. Business-to-business and business-to-consumer applications are also examined.

The third edition of this textbook comprehensively discusses global supply chain and operations management (SCOM), combining value creation networks and interacting processes. It focuses on operational roles within networks and presents the quantitative and organizational methods needed to plan and control the material, information, and financial flows in supply chains. Each chapter begins with an introductory case study, while numerous examples from various industries and services help to illustrate the key concepts. The book explains how to design operations and supply networks and how to incorporate suppliers and customers. It examines how to balance supply and demand, a core aspect of tactical planning, before turning to the allocation of resources to meet customer needs. In addition, the book presents state-of-the-art research reflecting the lessons learned from the COVID-19 pandemic, and emerging, fast-paced developments in the digitalization of supply chain and operations management. Providing readers with a working knowledge of global supply chain and operations management, with a focus on bridging the gap between theory and practice, this textbook can be used in core, specialized, and advanced classes alike. It is intended for a broad range of students and professionals in supply chain and operations management.

Business Information: Needs and Satisfaction

The Art and Science of Corporate Investment Decisions

Entrepreneurship

Handbook of Research on Emerging Technologies for Effective Project Management

Knowledge management has always been about the process of creating, sharing, using, and applying knowledge within and between organizations. Before the advent of information systems, knowledge management processes were manual or offline. However, the emergence and eventual evolution of information systems created the possibility for the gradual but slow automation of knowledge management processes. These digital technologies enable data capture, data storage, data mining, data analytics, and data visualization. The value provided by such technologies is enhanced and distributed to organizations as well as customers using the digital technologies that enable interconnectivity. Today, the fine line between the technologies enabling the technology-driven external pressures and data-driven internal organizational pressures is blurred. Therefore, how technologies are combined to facilitate knowledge management processes is becoming less standardized. This results in the question of how the current advancement in digital technologies affects knowledge management processes both within and outside organizations. Digital Technology Advancements in Knowledge Management addresses how various new and emerging digital technologies can support knowledge management processes within organizations or outside organizations. Case studies and practical tips based on research on the emerging possibilities for knowledge management using these technologies is discussed within the chapters of this book. It both builds on the available literature in the field of knowledge management while providing for further research opportunities in this dynamic field. This book highlights topics such as human-robot interaction, big data analytics, software development, keyword extraction, and artificial intelligence and is ideal for technology developers, academics, researchers, managers, practitioners, stakeholders, and students who are interested in the adoption and implementation of new digital technologies for knowledge creation, sharing, aggregation, and storage.
