The technological revolution has reached around the world, with important consequences for business, government, and the labor market. Computer-aided design, telecommunications, and other developments are allowing small players to compete with traditional giants in manufacturing and other fields. In this volume, 16 engineering and industrial experts representing eight countries discuss the growth of technological advances and their impact on specific industries and regions of the world. From various perspectives, these distinguished commentators describe the practical aspects of technology's reach into business and trade.

In the last ten years IT has brought fundamental changes to the way the world works. Not only has it increased the speed of operations and communications, but it has also undermined basic assumptions of traditional business models and increased the number of variables. Today, the survival of major corporations is challenged by a world-wide marketplace, international operations, outsourcing, global communities, a changing workforce, security threats, business continuity, web visibility, and customer expectations. Enterprises must constantly adapt or they will be unable to compete. Fred Cummins, an EDS Fellow, presents IT as a key enabler of the agile enterprise. He demonstrates how the convergence of key technologies—including SOA, BPM and emerging enterprise and data models—can be harnessed to transform the enterprise. Cummins mines his 25 years experience to provide IT leaders, as well as enterprise architects and management consultants, with the critical information, skills, and insights they need to partner with management and redesign the enterprise for continuous change. No other book puts IT at the center of this transformation, nor integrates these technologies for this purposes. Shows how to integrate and deploy critical technologies to foster agility Details how to design an enterprise architecture that takes full advantage of SOA, BPM, business rules, enterprise information management, business models, and governance Outlines IT's critical mission in providing an integration infrastructure and key services, while optimizing technology adoption throughout the enterprise Illustrates concepts with examples and cases from large and small commercial enterprises Shows how to create systems that recognize and respond to the need for change Identifies the unique security issues that arise with SOA and shows how to deploy a framework of technologies and processes that

But making it happen requires a systematic, hands-on approach. In the most advanced service economies, services create up to three-quarters of the wealth and 85% of employment, and yet we know relatively little about managing innovation in this sector. The critical role of services, in the broadest sense, has long been recognized, but is still not well understood. Most research and management prescriptions have been based on the experience of manufacturing is applicable to services, what must be adapted, and what is distinct and different. Such is the goal of this book. This unique collection brings together the latest academic research and management practice on innovation in services, and identifies a range of successful organizational responses to current technological opportunities and market imperatives. The contributors include leading researchers, consultants and practitioners in the field, who provide rigorous yet practical insights into managing and organizing innovation in services, which the authors seek to identify, but that these must be adapted to different contexts, specifically the scale and complexity of the environment. • That innovation in services is much more than the application of information technology (IT). In fact, the disappointing returns to IT investments in services have resulted in a widespread debate about the causes and potential solutions - the so-called "productivity paradox" in services. Instead here the authors adopt a broader notion of innovation, including technological, organizational and market change. The key is to
