Cancer is a very
aggressive disease
and currently it has
been considered a
challenge to
oncologists and
cancer patients
worldwide.

Nowadays, several
therapeutic

strategies had improved toward last decades.

Surgery is many times still the best curative treatment, mainly in early stage disease. However, Radiotherapy and chemotherapy acquired a main role in this scenario.

Target therapies

in tumour registries and pathology laboratories. Section two includes the numerical list of topography codes, which remain unchanged from the previous edition.

The numerical list of morphology codes is presented in the next

section, which
introduces several
new terms and
includes
considerable
revisions of the non-
Hodgkin lymphoma
and leukaemia
sections, based on
the WHO
Classification of
Hematopoietic and

Lymphoid Diseases.

The five-digit morphology codes allow identification of a tumour or cell type by histology, behaviour, and grade. Revisions in the morphology section were made in consultation with a large number of

experts and were finalised after field-testing in cancer registries around the world. The alphabetical index gives codes for both topography and morphology and includes selected tumour-like lesions and conditions. A

guide to differences in morphology codes between the second and third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms

morphology code,
terms for conditions
now considered
malignant, deleted
terms, and terms that
