

*Maps Calendar From The Atlas Maior Of 1165 By  
Joan Blaeu*

**February issue includes Appendix entitled Directory of United States Government periodicals and subscription publications; September issue includes List of depository libraries; June and December issues include semiannual index**

**Britain was the first country in the world to become an essentially urban county. And England is still one of the most urbanized countries in the world. The town and the city is the world that most of us inhabit and know best. But what do we actually know about our urban world - and how it was created? The Making of the English Urban Landscape tells the story of our towns and cities and how they came into being over the last two millennia, from Roman and Anglo-Saxon times, through the Norman Conquest and the later Middle Ages to the 'great rebuilding' in the sixteenth and seventeenth centuries, the 'polite townscapes' of the eighteenth, and the commercial and industrial towns and cities of the nineteenth and early twentieth century. The final chapter then takes the story from the end of the Second World War to the present, from the New Towns of the immediate post-war era to the trendy converted warehouses of Shoreditch. This is a book that will make the world you live in come alive. If you are a town or a city-dweller, you are unlikely ever to look at the everyday world around you in quite the same way again.**

**More than a hundred stereotype maps glazed with exquisite human prejudice, especially collected for you by Yanko Tsvetkov, author of the viral Mapping Stereotypes project. Satire and cartography rarely come in a single package but in the Atlas of Prejudice they successfully blend in a work of art that is both funny and thought-provoking. A reliable weapon against bigots of all kinds, it serves as an inexhaustible source of much needed argumentation and—occasionally—as a nice slab of paper that can be used to smack them across the face whenever reasoning becomes utterly impossible. This second edition packs the most extensive collection of Tsvetkov's maps to date in a single book suitable for all ages, genders, and races.**

**Atlas of the Heart**

**The beauty and awe generated by the celestial void captures our imagination and delights our aesthetic sense. Antiquarian map societies are prospering, and celestial maps are now viewed as a specialty of map collecting. This book traces the history of celestial cartography and relates this history to the changing ideas**

of man's place in the universe and to advances in map-making. Photographs from actual antiquarian celestial atlases and prints, many previously unpublished, enrich the text. The book describes the development and relationships between different sky maps and atlases as well as demonstrating contemporary cosmological ideas, constellation representations, and cartographic advances. Nearly thirty years after the end of the Cold War, its legacy and the accompanying Russian-American tension continues to loom large. Russia's access to detailed information on the United States and its allies may not seem so shocking in this day of data clouds and leaks, but long before we had satellite imagery of any neighborhood at a finger's reach, the amount the Soviet government knew about your family's city, street, and even your home would astonish you. Revealing how this was possible, *The Red Atlas* is the never-before-told story of the most comprehensive mapping endeavor in history and the surprising maps that resulted. From 1950 to 1990, the Soviet Army conducted a global topographic mapping program, creating large-scale maps for much of the world that included a diversity of detail that would have supported a full range of military planning. For big cities like New York, DC, and London to towns like Pontiac, MI and Galveston, TX, the Soviets gathered enough information to create street-level maps. What they chose to include on these maps can seem obvious like locations of factories and ports, or more surprising, such as building heights, road widths, and bridge capacities. Some of the detail suggests early satellite technology, while other specifics, like detailed depictions of depths and channels around rivers and harbors, could only have been gained by actual Soviet feet on the ground. *The Red Atlas* includes over 350 extracts from these incredible Cold War maps, exploring their provenance and cartographic techniques as well as what they can tell us about their makers and the Soviet initiatives that were going on all around us. A fantastic historical document of an era that sometimes seems less distant, *The Red Atlas* offers an uncanny view of the world through the eyes of Soviet strategists and spies.

Part detective novel, part ghost story, this brilliant debut asks a tantalizing question: What really happens when a girl goes missing? "A thrilling, many-faceted, gothic novel: Erin Kate Ryan's *Quantum Girl Theory* belongs in the same company as the work of Shirley Jackson and Carmen Maria Machado."—Kelly Link, author of *Get in Trouble* ONE OF THE MOST ANTICIPATED BOOKS OF 2022—CrimeReads *Mary Garrett* has a gift for finding missing girls, a special kind of clairvoyance she calls "the sight." Lured by a poster and the promise of a reward, she arrives at a small town in the Jim Crow South to discover that not one but three girls have vanished—two of whom are Black, and whose disappearances have gone uninvestigated outside their own community. She sets out to find them. As it turns out, Mary is herself a "missing girl." In another life, she was a Bennington College sophomore named Paula Jean Welden, who disappeared one night in 1946. The case captivated the nation's imagination, triggering front-page headlines, scores of dubious sightings, and a wave of

***speculation: Who was Paula Jean, really, and why had she disappeared? As Mary's search for the three missing girls intensifies, so do the glimpses of Paula Jean's other possible lives: She is a circus showgirl hiding from her past, a literary forger on the verge of being caught, a McCarthy-era informant in love with a woman she meets in a Communist cell. With the signals multiplying, the locals beginning to resent her presence, and threats coming from all sides, Mary wonders whether she can trust anyone—most of all herself. Both a captivating mystery and a powerful thought experiment, Quantum Girl Theory spins out a new way of seeing those who seem to disappear before our eyes.***

It's time to get off the beaten path. Inspiring equal parts wonder and wanderlust, Atlas Obscura celebrates over 700 of the strangest and most curious places in the world. Talk about a bucket list: here are natural wonders—the dazzling glowworm caves in New Zealand, or a baobab tree in South Africa that's so large it has a pub inside where 15 people can drink comfortably.

Architectural marvels, including the M.C. Escher-like stepwells in India. Mind-boggling events, like the Baby Jumping Festival in Spain, where men dressed as devils literally vault over rows of squirming infants. Not to mention the Great Stalacpipe Organ in Virginia, Turkmenistan's 40-year hole of fire called the Gates of Hell, a graveyard for decommissioned ships on the coast of Bangladesh, eccentric bone museums in Italy, or a weather-forecasting invention that was powered by leeches, still on display in Devon, England. Created by Joshua Foer, Dylan Thuras and Ella Morton, ATLAS OBSCURA revels in the weird, the unexpected, the overlooked, the hidden and the mysterious. Every page expands our sense of how strange and marvelous the world really is. And with its compelling descriptions, hundreds of photographs, surprising charts, maps for every region of the world, it is a book to enter anywhere, and will be as appealing to the armchair traveler as the die-hard adventurer. Anyone can be a tourist. ATLAS OBSCURA is for the explorer.

ATLAS OBSCURA is for the explorer.

This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1978.

Take a tour of Toronto, look around Lisbon or hot-foot it to Helsinki with this global adventure in a book! 30 best-loved cities from around the world are brought to life with illustrations by Martin Haake, which show in fabulous detail key landmarks, famous people, iconic buildings and cultural icons for all the family to enjoy. A search-and-find game on every page helps young readers to explore every city and spot the hundreds of details that makes each place unique.

History of Cartography

Mapping Europe's Borderlands

Great Maps

Atlas of Prejudice

**Geographies of Nationhood** examines the meteoric rise of ethnographic mapmaking in the nineteenth and early twentieth centuries as a form of visual and material culture that gave expression to territorialised visions of nationhood. In the Russian Empire's Baltic provinces, the development of ethnographic cartography, as part of the broader field of statistical data visualisation, progressively became a tool that lent legitimacy and an experiential dimension to nationalist arguments, as well as a wide range of alternative spatial configurations that rendered the inhabitants of the Baltic as part of local, imperial, and global geographies. Catherine Gibson argues that map production and the spread of cartographic literacy as a mass phenomenon in Baltic society transformed how people made sense of linguistic, ethnic, and religious similarities and differences by imbuing them with an alleged scientific objectivity that was later used to determine the political structuring of the Baltic region and beyond. **Geographies of Nationhood** treads new ground by expanding the focus beyond elites to include a diverse range of mapmakers, such as local bureaucrats, commercial enterprises, clergymen, family members, teachers, and landowners. It shifts the focus from imperial learned and military institutions to examine the proliferation of mapmaking across diverse sites in the Empire, including the provincial administration, local learned societies, private homes, and schools. Understanding ethnographic maps in the social context of their production, circulation, consumption, and reception is crucial for assessing their impact as powerful shapers of popular geographical conceptions of nationhood, state-building, and border-drawing.

Vols. for 1871-76, 1913-14 include an extra number, *The Christmas bookseller*, separately paged and not included in the consecutive numbering of the regular series.

The whole world is mapped out for your viewing pleasure in this captivating compendium, ranging from past to present through diverse themes of transport and technology to discoveries and development. Covering the classical maps of the ancient world and traveling through time to reach Google Earth in the 21st century, this unprecedented history of more than 60 maps opens up our planet as never before. **Great Maps** showcases early Medieval maps like including *mappae mundi*; iconic transport maps such as the London Underground; important travel maps including Dr. Livingstone's version of Africa; maps of natural wonders such as the ocean floor; and momentous moments including the marks on the Moon left by the lunar landings. There are maps that show the way to heaven, depict lands with no sunshine, and the mysterious home of "the people with no bowels" on this mind-blowing journey. Much more than just geographical data, maps are an accurate reflection of the culture and context of different time frames in history. British historian Jerry Brotton tells the amazing secret stories behind many of the most

**significant maps ever unearthed, revealing key features and innovative techniques in incredible detail. The unique insight into how mapmakers have expressed their world views results in this treasured book that makes a welcome addition to any bookshelf or home library.**

**After the enormous international success of The Phantom Atlas and The Golden Atlas, Edward Brooke-Hitching's stunning new book unveils some of the most beautiful maps and charts ever created during mankind's quest to map the skies above us. This richly illustrated treasury showcases the finest examples of celestial cartography - a glorious genre of map-making often overlooked by modern map books - as well as medieval manuscripts, masterpiece paintings, ancient star catalogues, antique instruments and other appealing curiosities. This is the sky as it has never been presented before: the realm of stars and planets, but also of gods, devils, weather wizards, flying sailors, medieval aliens, mythological animals and rampaging spirits. The reader is taken on a tour of star-obsessed cultures around the world, learning about Tibetan sky burials, star-covered Inuit dancing coats, Mongolian astral prophets and Sir William Herschel's 1781 discovery of Uranus, the first planet to be found since antiquity. Even stranger are the forgotten stories from European history, like the English belief of the Middle Ages in ships that sailed a sea above the clouds, 16th-century German UFO sightings and the Edwardian aristocrat who mistakenly mapped alien-made canals on the surface of Mars. As the intricacies of our universe are today being revealed with unprecedented clarity, there has never been a better time for a highly readable book as beautiful as the night sky to contextualise the scale of these achievements for the general reader.**

*The simplest purpose of a map is a rational one: to educate, to solve a problem, to point someone in the right direction. Maps shape and communicate information, for the sake of improved orientation. But maps exist for states as well as individuals, and they need to be interpreted as expressions of power and knowledge, as Steven Seegel makes clear in his impressive and important new book. Mapping Europe's Borderlands takes the familiar problems of state and nation building in eastern Europe and presents them through an entirely new prism, that of cartography and cartographers. Drawing from sources in eleven languages, including military, historical-pedagogical, and ethnographic maps, as well as geographic texts and related cartographic literature, Seegel explores the role of maps and mapmakers in the East Central European borderlands from the Enlightenment to the Treaty of Versailles. For example, Seegel explains how Russia used cartography in the aftermath of the Napoleonic Wars and, later, formed its geography society as a cover for gathering intelligence. He also explains the importance of maps to the formation of identities and institutions in Poland, Ukraine, and Lithuania, as well as in Russia. Seegel concludes with a consideration of the impact of cartographers' regional and socioeconomic backgrounds, educations, families, career options, and available language choices.*

*Mapping Meaningful Connection and the Language of Human Experience*

*The Making of Our Urban Landscape*

**The U.S. Census Bureau presents the Census 2000 Special Report "Mapping Census 2000: The Geography of U.S. Diversity." The report offers information about the patterns and changes in the United States population distribution since 1990. The text of the report is available in PDF format.**

**#1 NEW YORK TIMES BESTSELLER • In her latest book, Brené Brown writes, "If we want to find the way back to ourselves and one another, we need language and the grounded confidence to both tell our stories and be stewards of the stories that we hear. This is the framework for meaningful connection." In Atlas of the Heart, Brown takes us on a journey through eighty-seven of the emotions and experiences that define what it means to be human. As she maps the necessary skills and an actionable framework for meaningful connection, she gives us the language and tools to access a universe of new choices and second chances—a universe where we can share and steward the stories of our bravest and most heartbreaking moments with one another in a way that builds connection. Over the past two decades, Brown's extensive research into the experiences that make us who we are has shaped the cultural conversation and helped define what it means to be courageous with our lives. Atlas of the Heart draws on this research, as well as on Brown's singular skills as a storyteller, to show us how accurately naming an experience doesn't give the experience more power—it gives us the power of understanding, meaning, and choice. Brown shares, "I want this book to be an atlas for all of us, because I believe that, with an adventurous heart and the right maps, we can travel anywhere and never fear losing ourselves."**

This volume offers the author's central articles on the medieval and early modern history of cartography for the first time in English translation. A first group of essays gives an overview of medieval cartography and illustrates the methods of cartographers. Another analyzes world maps and travel accounts in relation to mapped spaces. A third examines land surveying, cartographical practices of exploration, and the production of Portolan atlases.

This illustrated work is intended to acquaint readers with the early maps produced in both Europe and the rest of the world, and to tell us something of their development, their makers and printers, their varieties and characteristics. The authors' chief concern is with the appearance of maps: they exclude any examination of their content, or of scientific methods of mapmaking. This book ends in the second half of the eighteenth century, when craftsmanship was superseded by specialized science and the machine. As a history of the evolution of the early map, it is a stunning work of art and science. This expanded second edition of Bagrow and Skelton's *History of Cartography* marks the reappearance of this seminal work after a hiatus of nearly a half century. As a reprint project undertaken many years after the book last appeared, finding suitable materials to work from proved to be no easy task. Because of the wealth of monochrome and color plates, the book could only be properly reproduced using the original materials. Ultimately the authors were able to obtain materials from the original printer Scotchprints or contact films made directly from original plates, thus allowing the work to preserve the beauty and clarity of the illustrations. Old maps, collated with other materials, help us to elucidate the course of human history. It was not until the eighteenth century, however, that maps were gradually stripped of their artistic decoration and transformed into plain, specialist sources of information based upon measurement. Maps are objects of historical, artistic, and cultural significance, and thus collecting them seems to need no justification, simply enjoyment.

This generously illustrated, easy-to-use reference gives instant information on 238 birds that are native to New York State. The core of the atlas is a series of accounts of each species, each account including a distribution

map with possible, probable, or confirmed breeding. Facing each map is an explanatory page of text that covers a number of topics: abundance, historical and current distribution, habitat, and nest description and location. On the same page is an illustration of the bird, often with its nest and young.
