In her pioneering book *Hard Core*, Linda Williams put moving-image pornography on the map of contemporary scholarship with her analysis of the most popular and enduring of all film and video genres. Now, fifteen years later, she showcases the next generation of critical thinking about pornography and signals new directions for study and teaching. *Porn Studies* resists the tendency to situate pornography as the outer limit of what can be studied and discussed. With revenues totaling between ten and fourteen billion dollars annually—more than the combined revenues of professional football, basketball, and baseball—visual, hard-core pornography is a central feature of American popular culture. It is time, Williams contends, for scholars to recognize this and give pornography a serious and extended analysis. The essays in this volume move beyond feminist debates and distinctions between a “good” erotica and a “bad” hard core. Contributors examine varieties of pornography from the tradition of the soft-core pin-up through the contemporary hard-core tradition of straight, gay, and lesbian videos and DVDs to the burgeoning phenomenon of pornography on the Internet. They explore, as examples of the genre, individual works as divergent as *The Starr Report*, the pirated Tommy Lee/Pamela Anderson honeymoon video, and explicit Japanese “ladies’ comics” consumed by women. They also probe difficult issues such as the sexualization of race and class and the relationship of pornography to the avant-garde. To take pornography seriously as an object of analysis also means teaching it. *Porn Studies* thus includes a useful annotated bibliography of readings and archival sources important to the study of pornography as a cultural form. Contributors: Heather Butler, Rich Cante, Jake Gerli, Minette Hillyer, Nguyen Tan Hoang, Despina Kakoudaki, Franklin Melendez, Ara Osterweil, Zabet Patterson, Constance Penley, Angelo Restivo, Eric Schaefer, Michael Sicinski, Deborah Shamoan, Maria St. John, Tom Waugh, Linda Williams

This book provides two thousand multiple choice questions on human anatomy and physiology, separated into 40 categories. The answer to each question is accompanied by an explanation. Each category has an introduction to set the scene for the questions to come. However not all possible information is provided within these Introductions, so an Anatomy and Physiology textbook is an indispensable aid to understanding the answers. The questions have been used in examinations for undergraduate introductory courses and as such reflect the focus of these particular courses and are pitched at the level to challenge students that are beginning their training in anatomy and physiology. The questions and answer combinations are to be used both by teachers, to select questions for their next examinations, and by students, when studying for an upcoming test. Students enrolled in the courses for which these questions were written include nursing, midwifery, paramedic, physiotherapy, occupational therapy, nutrition & dietetics, health sciences and students taking an anatomy and physiology course as an elective. This second edition provides 2400 multiple choice questions on human anatomy and physiology, and some physical science, separated into 40 categories. *In its thirtieth session the Commission reviewed the intersessional activities of its Scientific Advisory Committee (SAC) and its Committee on Aquaculture (CAQ). Based on the advice emanating from SAC and proposals by Members, the GFCM adopted respectively: three binding recommendations on fisheries management measures, including on fishing effort and on the protection of sensitive habitats; two recommendations on illegal, unreported and unregulated (IUU) fishing, including on the establishment of a black list of vessels and on data confidentiality procedure. It also endorsed three recommendations from the International Commission for the Conservation of Atlantic Tunas (ICCAT), including on the establishment of a programme for transshipment by large-scale longliners. The GFCM reiterated its satisfaction with progress made in the implementation of the five regional projects executed by FAO in support of the Commission. The Commission ascertained its financial situation and agreed to use arrears to build a Working Capital Fund. In the Secretariat, it established a post of Statistician and a post of Programmer/System Analyst. Work progress related to the new headquarters of the Commission was reviewed. The Commission decided to postpone the adjustments to its Rules of Procedure to its next plenary. The Commission established a Compliance Committee. It formalized the Environment Aquaculture Mediterranean Network (EAM) and the Statistical Information System on Aquaculture (SIPAM) as subsidiary bodies of CAQ, and endorsed the guidelines prepared by the Joint GFCM/ICCAT Working Group on Sustainable Tuna Farming. The Commission agreed on its programme of work and adopted its autonomous budget for the year 2006. The GFCM elected its new Bureau Over the last 35 years, Steven C. Hayes and his colleagues have developed Acceptance and Commitment Therapy (ACT) with many hundreds of studies supporting the impact of his approach on everything from chronic pain to weight loss to prejudice and bigotry. A Liberated Mind is the summary of Steven's life's work which will teach readers how to live better, happier and more fulfilled lives by applying the six key processes of ACT. Put together these processes teach us to pivot: to "defuse" rather than fuse with our thoughts; to see life from a new perspective; and to discover our chosen values, those qualities of being that fuel meaning. Steve shares fascinating research results like how ACT techniques decreased typing errors on a clerical test or showed that positive affirmations actually increase negative emotion. And he weaves them with stories of clients and colleagues as well as his own riveting story of healing himself of a severe panic disorder, which is how the idea of psychological flexibility was born. A Liberated Mind is a powerful and important book about a new form of psychology, destined to become a modern classic of narrative psychology on par with Daring Greatly and Rising Strong by Brene Brown, or Carol Dweck's Mindset.*

*Electrical therapy of the heart has rapidly evolved over recent years with the development of the cardiac implantable defibrillator and the application of the cardiac resynchronization therapy to improve performance of the congestive failed heart. There is an impressive amount of literature produced to assess the efficacy and effectiveness of the electrical therapy. New technology is continuously introduced into the market for the treatment of electrical heart disease with optimized performance and implemented design, with approximately 600,000 new pacemakers implanted each year. Attention of the electrophysiology community has mainly focused on the biomedical aspects of electrical therapy, but the psychological, emotional, social and cognitive aspects of the implantable devices has been largely overlooked. Health-related quality of life (QoL) and, to a lesser extent, psychological disorders, i.e. anxiety and depression, have rarely been assessed as outcomes in clinical trials, and results are pointing towards the impact of the implantable devices on QoL and mental health not being direct but moderated and mediated by several biomedical as well as psychosocial variables. Furthermore, the cognitive effects of the implantable devices have rarely been assessed in empirical studies, although cognitive impairment is largely associated with the heart disorders that require implantation of an electrical device and cognitive benefits are strongly expected from the therapy. The aim of this book is to collect, appraise and condense the results of all empirical studies that have investigated, even marginally, the relationships between the implantable devices and any psychological, emotional, social and cognitive dimension. This book is a cornerstone for all involved in device utilization (physicians, nurses, technicians, industry representatives) that need to understand this topic.*

With this brief, fast-paced introduction to TypeScript, .NET, Web and Windows 8 application developers who are already familiar with JavaScript will easily get up to speed with TypeScript and decide whether or not to start incorporating it into their own development. TypeScript is 'JavaScript for Application-scale development'; a superset of JavaScript that brings to it an additional object-oriented-like syntax familiar to .NET programmers that compiles down into simple, clean JavaScript that any browser can run today. It's also tied to the next version of the JavaScript standard, which means that TypeScript will continue to evolve over time to keep in step with that standard and with the capabilities of the engines that will execute JavaScript applications. If you are a .NET developer, Web designer or developer, or a programmer with a keen interest in scalable applications, TypeScript Revealed is a great way to get started with the language, learn how it compiles into JavaScript, and how easy it is to learn from a .NET/Java developer's perspective. Takes you through the language features in Typescript additional to those in JavaScript Describes the tooling and community support for TypeScript development Discusses how TypeScript can be included in ASP.NET, Windows 8, and node.js application development projects. What you'll learn Why you should care about TypeScript What it does and what it doesn't do The current toolset and levels of support The new syntax features of TypeScript How to build your own TypeScript declaration files How to incorporate TypeScript into your projects Who this book is for TypeScript Revealed is aimed at the early adopter developer who is already familiar with Microsoft tools and .NET and/or JavaScript development that wants a flavor of TypeScript distilled, culled, and organized in one place.
