Proud of Their Heritage and Sustained by Their Faith. They Came to Tame a New Land She had promised herself that once they left the fjords of Norway, she would not look back. After three long years of scrimping and saving to buy tickets for their passage to America, Roald and Ingeborg Bjorklund, along with their son, Thoralf, finally arrive at the docks of New York City. It was the promise of free land that fed their dream and lured them from their beloved home high above the fjords of Norway in 1880. Together with Roald’s brother Carl and his family, they will build a good life in a new land that promises untold wealth and vast farmlands for their children. As they join the throngs of countless immigrants passing through Castle Garden, they soon discover that nothing is as they had envisioned it. Appalled by the horrid stories of fellow immigrants bilked of all their money and forced to live in squalid living conditions, the Bjorklunds continue their long journey by train as far as Grand Forks. From there a covered wagon takes them into Dakota Territory, where they settle on the banks of the Red River. But there was no way for them to foresee the price they will have to pay to wrest a living from the indomitable land. The virgin prairie refuses to yield its treasure without a struggle. Will they be strong enough to overcome the hardships of that first winter?

The book has a unique style - a basic idea of the topic is given followed by various laboratory methods presented systematically, keeping in mind problems faced by students and also stressing the "do's and don'ts" whilst carrying out various experiments. Diagrams and flow charges help to make learning easier and more interesting. And the final chapters contain instructions on practical exercises written to enable the student to perform them with confidence and ease. This is a superb step-by-step guide for microbiology students.

After Hurricane Higgins crashed out of smoker's top league, Jimmy White has been the 'People's Champion' even though he never quite made the top World spot, pipped at the post in 1995 by Stephen Hendry, after missing one single black. Aged 16, White was the youngest player to win the English Amateur Championship. At 18, he won the World Amateur title. By 1984, he's a professional success, married but not at all settled. He's the kind of man who goes out for a packet of cigarettes and comes home two weeks later. Gambling, women, marathon binges with showbiz friends like Ron Wood of the Rolling Stones, have threatened the stability of his marriage. But somehow White has survived, to tell in candid detail, a most unusual, often outrageous story of a very sporting life.

An illuminating collection of work by members of the Religious Society of Friends, covering nearly three centuries of religious development, this comprehensive anthology brings together writings from prominent Friends that illustrate the development of Quakerism, show the nature of Quaker spiritual life, discuss Quaker contributions to European and American civilization, and introduce the diverse community of Friends, some of whom are little remembered even among Quakers today. It gives a balanced overview of Quaker history, spanning the globe from its origins to missionary work, and explores daily life, beliefs, perspectives, movements within the community, and activism throughout the world. It is an exceptional contribution to contemporary understanding of religious thought. The MR PORTER Guide to a Better Day

This book is dedicated to Arístid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Arístid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been cus tomarily referred to as L systems. Lindenmayer’s invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and fractal geometry series). As evident from the articles and references in this book, the in terest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here “0” stands for zero contact between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with “oh” rather than “zero”, and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling “DOL” of “DOL” could be read in the suggestive way, DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

This is the ninth in the 300 series of circuit design books, again contains a wide range of circuits, tips and design ideas. The book has been divided into sections, making it easy to find related subjects in a single category. The book not only details DIY electronic circuits for home construction but also inspiring ideas for projects you may want to design from the ground up. Because software in general and microcontroller programming techniques in particular have become key aspects of modern electronics, a number of items in this book deal with these subjects only. Like its predecessors in the 300 series, “308 Circuits” covers the following disciplines and interest fields of modern electronics: test and measurement, radio and television, power supplies and battery chargers, general interest, computers and microprocessors, circuit ideas and audio and hi-fi.

George Simlins has grown up in the city-state of Ilyria, an enclave of logic and reason founded as a refuge from the Reaction, a wave of religious fundamentalism that swept away the nations of the twenty-first century. Yet to George, Ilyria’s militant rationalism is as stifling as the faith-based superstition that dominates the world outside its walls. For George has fallen in love with Lucy, A prostitute. A robot. She might be a machine, but the semblance of life is perfect. To the city authorities, robot sentience is a malfunction, curable by erasing and resetting silicon minds. But George knows that Lucy is something more. His only alternative is to flee Ilyria, taking Lucy deep into the religious Outlands where she must pass as human because robots are seen as mockeries of God, burned at the stake, dismembered, crucified. Their odyssey leads them through betrayal, war and madness, ending only at the monastery of the Holy Machine...
