This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

The Art of Bitfulness

*Everything has a price, but it isn't always obvious what that price is. Many of the prices we pay seem to make little sense. We shell out \$2.29 for a coffee at Starbucks when a nearly identical brew can be had at the corner deli for less than a dollar. We may be less willing to give blood for \$25 than to donate it for free. Americans hire cheap illegal immigrants to fix the roof or mow the lawn, and vote for politicians who promise to spend billions to keep them out of the country. And citizens of the industrialized West pay hundreds of dollars a year in taxes or cash for someone to cart away trash that would be a valuable commodity in poorer parts of the world. The Price of Everything starts with a simple premise: there is a price behind each choice that we make, whether we're deciding to have a baby, drive a car, or buy a book. We often fail to appreciate just how critical prices are as a motivating force shaping our lives. But their power becomes clear when distorted prices steer our decisions the wrong way. Eduardo Porter uncovers the true story behind the prices we pay and reveals what those prices are actually telling us. He takes us on a global economic adventure, from comparing the relative price of a vote in corrupt São Tomé and in the ostensibly uncorrupt United States, to assessing the cost of happiness in Bhutan, to deducing the dollar value we assign to human life. His unique approach helps explain: \* Why polygamous societies actually place a higher value on women than monogamous ones. \* Why someone may find more value in a \$14 million license plate than the standard issue, \$95 one. \* Why some government agencies believe one year of life for a senior citizen is four times more valuable than that of a younger person. Porter weaves together the constant-and often unconscious-cost and value assessments we all make every day. While exploring the fascinating story behind the price of everything from marriage and death to mattresses and horsemeat, Porter draws unexpected connections that bridge a wide range of disciplines and cultures. The result is a cogent and insightful narrative about how the world really works. Watch a Video*

*That Marcello Gandini is one of the greatest of automobile designers ever has never been disputed, and whether he is the greatest ever, only time and the directions automobile design takes, will tell. But there is no doubting Marcello Gandini's immense impact on automobile design in the last four decades of the 20th century that still remains valid well into the 21st century. the Lamborghini Miura to the Maserati*

*Quattroporte IV, the humble Innocenti Mini to the epic Cizeta V16T, Marcello Gandini has designed some of the most epochal of all automobiles. Iconic cars like the first-generation BMW 5 Series, the Audi 50/VW Polo, the Fiat X1/9, the Lamborghini Countach and the Diablo, the Lancia Stratos, the Renault Magnum super truck, and many others have all flowed his stylistic pen. -- Designing automobiles that really defined the late 1960s, 1970s, 1980s, even the 1990s, Marcello Gandini is, arguably, the one man who had the greatest impact, the one who changed automotive design the most.*

*IS YOUR TECHNOLOGY DRIVING YOU CRAZY? We are in a toxic relationship with our devices. The line between work and home has become blurrier than ever. The constant onslaught of information affects our mental peace. We all know this is not good for us. Yet, we can't help ourselves from going back for one more scroll. The internet cannot be avoided, but our relationship with it can change. The Art of Bitfulness helps create healthy boundaries between you and the floodgates of the internet. It offers new strategies to reclaim your time, privacy and attention. This book is all about how to live with tech, not how to live without it. The goal is not to spend less time on your devices; it is to spend your time on your devices better. This book also talks about how we got here in the first place. Why does our technology limit us, rather than liberate us? The Art of Bitfulness offers a new way of building tech for all, rather than a winner-take-all system. The authors of this book are veterans of the digital world. They are optimistic about technology's potential to transform society, but are pragmatic about what needs to happen to get there. This book is not anti-tech, it is pro-you.*

A hilarious collection inspired by a former Saturday Night Live writer's real experiences in Hollywood, chronicling the absurdity of fame and the humanity of failure in a world dominated by social media influencers and reality TV stars. Simon Rich is "one of the funniest writers in America" (Daily Beast) -- a humorist who draws comparisons to Douglas Adams (New York Times Book Review), James Thurber, and P.G. Wodehouse (The Guardian). With Hits and Misses, he's back with a hilarious new collection of stories about dreaming big and falling flat, about ordinary people desperate for stardom and the stars who are bored by having it all. Inspired by Rich's real experiences in Hollywood, Hits and Misses chronicles all the absurdity of fame and success alongside the heartbreaking humanity of failure. From a bitter tell-all by the horse Paul Revere rode to greatness to a gushing magazine profile of everyone's favorite World War II dictator, these stories roam across time and space to skewer our obsession with making it big -- from the days of ancient Babylon to the age of TMZ.

An extraordinary and rare insight into how a few determined entrepreneurs created an icon... - C. K. Prahalad  
The targets were stupendous and considered unachievable by almost everyone. Slightly over two years to find a suitable partner, finalize all legal documentation, get governmental approval to these agreements as well as to the investment proposals, build a factory, develop a supplier base to meet localization regulations, create a sales and service network, and develop and launch a peoples car that would sell 100,000 a year, in a sector where Indian expertise was limited. And to do this as a public sector company, having to follow all governmental systems and procedures, and having to please both its masters in the government and Suzuki Motor Corporation. However, the Maruti project succeeded, and in ways that were unimaginable in 1983. The car revolutionized the industry and put a country on wheels. Suddenly, ordinary middle-class men and women could aspire to own a reliable, economical and modern car, and the steep sales targets were easily met. Twenty-six years later, the company, now free of government controls and facing competition from the worlds major manufacturers who have entered the Indian market, still leads the way. Not only that, cars made by Maruti can be seen in all continents. By any yardstick, it is an incredible story, involving grit, management skill and entrepreneurship of a high order. R.C. Bhargava, who was at the helm of the company, and is currently its chairman, co-writing with senior journalist and author Seetha, shows how it was done in this riveting account of a landmark achievement.

This new book by two distinguished Italian economists is a highly original contribution to our understanding of the origins and aftermath of the financial crisis. The authors show that the recent financial crisis cannot be understood simply as a malfunctioning in the subprime mortgage market: rather, it is rooted in a much more fundamental transformation, taking place over an extended time period, in the very nature of finance. The 'end' or purpose of finance is to be found in the social institutions by which the making and acceptance of promises of payment are made possible - that is, the creation and cancellation of debt contracts within a specified time frame. Amato and Fantacci argue that developments in the modern financial system by which debts are securitized has endangered this fundamental credit/debt structure. The illusion has been created that debts are universally liquid in the sense that they need not be redeemed but can be continually sold on in increasingly extensive global markets. What appears to have reduced the riskiness of default for individual agents has in fact increased the fragility of the system as a whole. The authors trace the origins of this profound transformation backwards in time, not just to the neoliberal reforms of the 1980s and 90s but to the birth of capitalist finance in the mercantile networks of the sixteenth and seventeenth centuries. This long historical perspective and deep analysis of the nature of finance enables the authors to tackle the challenges we face today in a fresh way - not simply by tinkering with existing mechanisms, but rather by asking the more profound question of how institutions might be devised in which finance could fulfil its essential functions.

The E-Class Story

The automotive industry requirements for vehicle weight reduction, weight containment, improved part functionality and passenger safety have resulted in the increased use of steel grades with a fully martensitic microstructure. These steel grades are essential to improve the anti-intrusion resistance of automotive body parts and the related passenger safety during car collisions. Standard advanced high strength steel (AHSS) grades are notoriously difficult to be formed by cold stamping; they are characterized by elastic springback, poor stretch flangeability and low hole expansion ratios. Hot stamping has therefore received much attention recently as an alternative technology to produce AHSS automotive parts. In this book, selected articles from the Fourth International Conference on Advanced High Strength Steel and Press Hardening held on August 20-22th, 2018 in Hefei, China, are compiled. It focuses on AHSS for the development of press hardening of high performance sheet metal for lightweight vehicle, advanced digital manufacturing technology, as well as the physical metallurgy principles of the hot stamping process. Aiming at the process design and industrial application for hot stamping of press hardened steel and high strength aluminium alloy sheet, the effect of temperature and strain rate on the formability and mechanical properties of the products is discussed. In addition, more practical cases are provided concerning accurate modelling and multi-physics coupling simulation of the hot stamping process. Furthermore, the influence of tool design on forming process, more precise process control strategies to increase production efficiency, and the improvement of hot stamping equipment by advanced design methods will also be presented.

"A Vision for Safety replaces the Federal Automated Vehicle Policy released in 2016. This updated policy framework offers a path forward for the safe deployment of automated vehicles by: encouraging new entrants and ideas that deliver safer vehicles; making Department regulatory processes more nimble to help match the pace of private sector innovation; and supporting industry innovation and encouraging open communication with the public and with stakeholders."--Introductory message.
