water in the cities of the future. Selected case studies are used to illustrate the different types of water reuse, i.e. agricultural irrigation, golf course and landscape irrigation, urban and industrial uses, environmental enhancement, as well as indirect and direct potable reuse. The various aspects related to water reuse are covered, including treatment technologies, water quality, economics, public acceptance, benefits, keys for success and main constraints. These international case studies highlight the best practices for the implementation of water

reuse and provide the perspective for the integration of water recycling projects in the future, both for megacities and rural areas. Milestones in Water Reuse: The Best Success Stories demonstrates that planned water reuse is a cost competitive and energy-saving option to increase water availability and reliability. This book provides policy makers and regulators with a good understanding of water reuse and helps them to consider recycled water as safe and how it can be used. It is intended to be read by all people in the water sector and shows how

The 20th century's automobile-inspired land use changes brought about tremendous transformations in how stormwater moves across the modern urban land-scape. Streets and parking areas in the average urban family's neighborhood now exceed the amount of land devoted to living space. Add parking, office and commercial space, and it's easy to understand how modern cities have experienced a three-fold increase in impervious areas. Traditional wet weather collection systems removed stormwater from urban areas as

Innovative Urban WetWeather Flow Management Systems does two things: It considers the physical, chemical, and biological characteristics of urban runoff; then describes innovative methods for improving wet weather flow (WWF) management systems. The result of extensive research, Innovative Urban Wet-Weather Flow Management Systems looks most at how to handle runoff in developments of the 21st century: the conflicting objectives of providing drainage

Focusing WWF treatment on intensively used areas, such as the 20 percent of streets that handle the bulk of the traffic, and under utilized parking areas is also considered. Indonesia needs significant additional infrastructure investment to sustain its economic growth. However, the COVID-19 pandemic has further limited the fiscal space of the government. This report proposes a new method to increase infrastructure investment based on the concept of value capture. The report studies how Indonesia's existing policies and regulations can be used to build a value capture framework that ensures the maximization of the social, economic, and

In port cities around the world, waterfront development projects have been hailed both as spaces of promise and as crucial territorial wedges in twenty-first century competitive growth strategies. Frequently, these mega-projects have been intended to transform derelict docklands into communities of hope with sustainable urban economies—economies intended to both compete in and support globally-networked hierarchies of cities. engages with major theoretical debates and empirical findings on the ways waterfronts transform and have been transformed in port-cities in North and South America, Europe, the Caribbean. It is organized around the themes of fixities (built environments, institutional and regulatory structures, and cultural practices) and flows (information, labor, capital, energy, and knowledge), which are key categories for understanding processes of change. By focusing on

designed, managed and used in ways that can make them more inclusive, lively and sustainable. The book draws on detailed examination of a diversity of waterfronts from cities across Europe, Australia and Asia, illustrating the challenges of connecting these waterfront precincts to the surrounding city and examining how well they actually provide connection to water. The book challenges conventional large scale, long-term approaches to waterfront redevelopment, presenting a broad re-thinking of the formats and processes through which urban redevelopment can happen. It examines a range of actions that transform and activate urban spaces, including informal appropriations, temporary

Global Trends of Smart Cities provides integrated analysis of 135 cities that participated in the IBM 's Smarter Cities Challenge in 2010–2017. It establishes evidence-based benchmarking of city geographies, city sizes, governance structures, and local planning contexts in smart cities. This book uses a combination of descriptive statistical analysis and real-world case study narratives to evaluate the ways in which each individual urban variable or their combination matter in the diversity of smart city approaches around the globe. It is acknowledged that the Smarter Cities Challenge offers a

Nevertheless, the global presence of the Challenge across five continents and its involvement with 135 cities of all size and socioeconomic status provides a solid foundation to conduct comparative research on smart cities. Considering limited comparative research available in the smart city debate, this book makes significant contribution in understanding the state of smart city development in urban governments worldwide. Offers an integrated assessment of smart cities using a combination of statistical analysis and real-world case study narrations Compares smart city interventions from the 135 cities that participated in the Smarter Cities Challenge with detailed case study

The Shenzhen Phenomenon is a comprehensive and systematic study about how Shenzhen, the world ' s fastest growing city, has developed into an international metropolis from scratch within 40 years. It unravels the decision and policy making, planning, design, and development processes that have enabled the city ' s rapid growth, and associated problems and paradoxes. It also reveals the politics and power that have propelled this experimental city to spearhead Deng Xiaoping ' s ' reform and opening-up ' agenda, which has made the city and remade the nation. This book demystifies several long-held misperceptions

through identifying Shenzhen ' s rise as an opportunity deriving from a crisis, as a product of both grassroots ingenuity and top vision, and as both a planned city and an unplanned city. Produced on the 40th anniversary of Shenzhen, this timely volume not only offers a comprehensive and systematic chronicle of the city, but also opens a window to understand China ' s new city making and urbanisation. It will be of interest to academics, students and practitioners in the field of urban and Chinese studies, as well as urban planning and design.

resorting to star architects to brand their projects, spark urban regeneration and market the city image internationally. This book shifts the attention from star architects to star architecture, arguing that the process of deciding about and implementing relevant architectural and urban projects is not the product of any single actor. Star architecture can, in fact, be better studied and understood as assembled by multiple actors and in its relationship with urban transformation. In its 18 chapters, the book presents a multidisciplinary collection of expert contributions in the fields of urban planning, architecture, media studies, urban economics, geography, and sociology,

consistently brought together for the first time to deal with this topic. Through a vast array of case studies and analytical techniques touching over 20 cities in Europe, the book shows the positive and more problematic impacts of star architecture with reference to the preservation of built heritage, tourism and media. The book will be of interest to architects, sociologists, urban planners, and public administrators.

pressing today, as the region is subject to its own version of what is described in the international literature as a new 'land rush' or 'land grab' in developing countries. This volume aims to test the application of one particular theoretical framework to the Melanesian version of this phenomenon, which is the framework put forward by Derek Hall, Philip Hirsch and Tania Murray Li in their 2011 book, Powers of Exclusion: Land Dilemmas in Southeast Asia. Since that framework emerged from studies of the agrarian transition in Southeast Asia, the key question addressed in this volume is whether 'land transformations' in Melanesia are

proceeding in a similar direction, or whether they take a somewhat different form because of the particular nature of Melanesian political economies or social institutions. The contributors to this volume all deal with this question from the point of view of their own direct engagement with different aspects of the land policy process in particular countries. Aside from discussion of the agrarian transition in Melanesia, particular attention is also paid to the growing problem of land access in urban areas and the gendered nature of landed property relations in this region. The twentieth century witnessed an unprecedented increase in the number of capital cities worldwide - in 1900 there were

only about forty, but by 2000 there were more than two hundred. And this, surely, is reason enough for a book devoted to the planning and development of capital cities in the twentieth century. However, the focus here is not only on recently created capitals. Indeed, the case studies which make up the core of the book show that, while very different, the development of London or Rome presents as great a challenge to planners and politicians as the design and building of Brasília or Chandigarh. Put simply, this book sets out to explore what makes capital cities different from other cities, why their planning is unique, and why there is such variety from one city to another.

GIS. It describes the strategic planning process an organization must undertake prior to GIS implementation. The heart of the book is the formula for success that offers a systematic methodology for examining and benchmarking a GIS initiative and the practical and repeatable strategy for success. There are many obstacles to successful GIS implementation, and unfortunately, the local government landscape is riddled with false starts, poorly planned implementations, and glorified mapping systems. This book documents the reason for failure and possible remedies to overcome the challenges to implementation. It discusses

education, and infrastructure, and how to develop performance measures related to the stated objectives of an organization. The book combines theory with real-world experience to offer guidance on the process of managing GIS implementation. Through key components, this book introduces a new way to think about GIS technology.

This comprehensive volume contributes to the existing and emerging body of literature on contemporary urbanization and the interactions between cities and the environment. The volume is contextualized against latest theories, debates and discussions on

'sustainable urbanization', the post-2015 development agenda of the United Nations and India's official launching of the 'smart city' agenda. Reflecting on three major components of urban sustainability: investments and infrastructures, waste management, and urban ecologies and environmentalisms, it moves beyond the bi-centric approach of only looking into the differences between the 'developed' and the 'developing' world and reflects on cities across India using polycentric methods and approaches. The Indian urban scenario is extremely complex and diverse, and solutions laid out in official and non-official documents tend to miss

these complexities. This volume includes innovative research across different parts of India, identifying city-specific sources of unsustainability and challenges along with strategies and potentials that would make the process of urban transition both sustainable and equitable. Complex explorations of non-linear, bottom-up, multisectoral process-based local urban contexts across north, south, east and west Indian cities in this volume critique a general acceptance of the universalized concept of ‘sustainable urbanization’ and suggest ways that might be important for transcending inclusive theories to form practical policy-based recommendations and

An analysis of the influences on urban planning in Europe. Detailed case studies are used to explore planning policies in a range of European cities, and discuss the social and environmental objectives that influence today's urban planner.

Vladimir Putin has a master plan to destroy Europe, divide NATO, reclaim Russian influence in the world, and most of all to marginalize the United States and the West in order to achieve regional hegemony and global power.

Putin's unified strategy and vision for Europe has not been thoroughly discussed or articulated in any meaningful way until now. Putin's Master Plan is the first comprehensive attempt to systematically explain Putin's global strategy, which could inevitably and inexorably lead to the breakup of the NATO alliance, and potentially to war with the West. Currently, the West has no strategy, no plan, and no tactics to confront Putin's master plan other than imposing limited economic sanctions, which have done little to deter Putin's aggression—and may well have encouraged and facilitated it. The viewpoint taken here is not just alarmism, but an accurate and, for the first time, clear and sober portrayal of a frightening situation that, more and more, serious observers of European and Russian politics are

openly recognizing and acknowledging. Putin's Master Plan makes the case that it is essential to wake up to Putin's strategy to destroy Europe, divide NATO, and build a new empire in the former Soviet Union. Russia has demonstrated an extraordinary level of aggression, most boldly in its outright invasions of Georgia and Ukraine. American weakness and a divided Europe have left Russia's terrified neighbors without an alternative to Russian domination, and even once-stalwart American allies such as the Republic of Georgia are on the brink of becoming part of Putin's new empire in Europe. Putin has made it clear that he sees NATO expansion as a fundamental threat to Russian nationhood, and he is systematically challenging the NATO Alliance as well as the United States. So far, he is winning.
