An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice,

he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very

loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

本书详细介绍了Mastercam X3的设计和数控加工方法。全书共分8章，主要内容包括MastercamX3基础知识、二维图形的绘制与编辑、三维曲面造型、实体造型、数控加工通用设置、二维加工、三维曲面加工以及Mastercam X3在模具中的应用实例。书中重点介绍了Mastercam X3的CAD和CAM两大基本模块的各种功能，并介绍了多个应用实例。每章都配有难度适中的练习题，便于读者上机

Computer Numerical Control (CNC) controllers are high value-added products counting for over 30% of the price of machine tools. The development of CNC technology depends on the integration of technologies from many different industries, and requires strategic long-term support. “Theory and Design of CNC

Systems” covers the elements of control, the design of control systems, and modern open-architecture control systems. Topics covered include Numerical Control Kernel (NCK) design of CNC, Programmable Logic Control (PLC), and the Man-Machine Interface (MMI), as well as the major modules for the development of conversational programming methods. The concepts and primary elements of STEP-NC are also introduced. A collaboration of several authors with considerable experience in CNC development, education, and research, this highly focused textbook on the principles and development

This unique text presents a thorough introduction to Mastercam Mill for students with little or no prior experience. It can be used in virtually any educational setting -- from four-year engineering schools to community colleges and voc/tech schools to industrial training centers -- and will also serve as a reliable reference for on-the-job use or as a self-study manual. The award-winning authors have carefully arranged the contents in a clear and logical

sequence and have used many hundreds of visuals instead of wordy explanations. An enclosed CD contains Mastercam Demo V. 9 and also includes examples and exercises from the text for student practice. Learning Mastercam Mill Step by Step is sure to become a valuable resource for anyone learning or using Mastercam Mill overwhelmingly, the leading software of its type in industry. Provides a modern, comprehensive overview of computer-aided design and manufacturing. This text is designed to be student-oriented, and covers important developments, such as solid modeling and parametric modeling. The topic coverage is supported throughout with numerous applied examples, cases and problems.
