Apple Music is, to quote the company, "All the ways you love music. All in one place." In non-marketing lingo, Apple Music is built around two major components: iCloud Music Library, which combines your purchased music library and ripped tracks in one place; and the Apple Music streaming catalog, where you can find more than 10 million tracks from artists around the world. These two parts live side by side in the Music app: You can keep each separate by only streaming the Apple Music catalog, or you can add streaming songs to your offline Music library, where they can be mixed into playlists (offline or publicly shareable) or shuffled amongst the rest of your music. Apple Music also offers a massive recommendation and browsing area for its streaming catalog: As you listen to songs in the Music app, Apple collects data about your tastes and drops daily custom-curated playlists in the app for you to listen to, along with a weekly algorithmic "New Music" mix that suggests songs and artists you might like. You can also poke around the entire streaming catalog's array of new music, curated playlists, music videos, and more. Table of Contents Introduction 1. Signing up for Apple Music 2. This open access book provides a concise explanation of the fundamentals and background of the surround sound recording and playback technology Ambisonics. It equips readers with the psychoacoustical, signal processing, acoustical, and mathematical knowledge needed to understand the inner workings of modern processing utilities, special equipment for recording, manipulation, and reproduction in the higher-order Ambisonic format. The book comes with various practical examples based on free software tools and open scientific data for reproducible research. The book's introductory section offers a perspective on Ambisonics spanning from the origins of coincident recordings in the 1930s to the Ambisonic concepts of the 1970s, as well as classical ways of applying Ambisonics in first-order coincident sound scene recording and reproduction that have been practiced since the 1980s. As, from time to time, the underlying mathematics become quite involved, but should be comprehensive without sacrificing readability, the book includes an extensive mathematical appendix. The book offers readers a deeper understanding of Ambisonic technologies, and will especially benefit scientists, audio-system and audio-recording engineers. In the advanced sections of the book, fundamentals and modern techniques as higher-order Ambisonic decoding, 3D audio effects, and higher-order recording are explained. Those techniques are shown to be suitable to supply audience areas ranging from studio-sized to hundreds of listeners, or headphone-based playback, regardless whether it is live, interactive, or studio-produced 3D audio material.

Recording studios are the most insulated, intimate and privileged sites of music production and creativity. Yet in a world of intensified globalisation, they are also sites which are highly connected into wider networks of music production that are increasingly spanning the globe. This book is the first comprehensive account of the new spatialities of cultural production in the recording studio sector of the musical economy, spatialities that illuminate the complexities of global cultural production. This unique text adopts a social-geographical perspective to capture the multiple spatial scales of music production: from opening the "black-box" of the insulated space of the recording studio; through the wider contexts in which music production is situated; to the far-flung global production networks of which recording studios are part. Drawing on original research, recent writing on cultural production across a variety of academic disciplines, secondary sources such as popular music biographies, and including a wide range of case studies, this lively and accessible text covers a range of issues including the role of technology in musical creativity; creative collaboration and emotional labour; networking and reputation; and contemporary economic challenges to studios. As a contribution to contemporary debates on creativity, cultural production and creative labour, Cultural Production in and Beyond the Recording Studio will appeal to academic students and researchers working across the social sciences, including human geography, cultural studies, media and communication studies, sociology, as well as those studying music production courses.

We are proud of the high quality of our books and hope you will enjoy this eBook version." We might have often heard of this popular old saying that a jack of all could become the master of none. This is indeed a fact, some really experienced man might have said this because he might have tried his hands in all places he could which resulted from him becoming ultimately a master in none. Whenever we read motivational quotes and motivational speeches from all the great people in the world, we are advised to focus. That means we should concentrate on doing one specific thing where we want to achieve, and it helps. In fact, I have experienced and advised my juniors to do the same. I use to tell them that now you are a beginner and find yourself nowhere but as soon you spend a decade in a skill, an industry, a field of study, a sport, a profession, a business, or simply practicing a hobby; you reach somewhere and nobody in this world can take it away from you be it anywhere on this planet or elsewhere. Teachers deliver a lecture from half an hour to more but it is always the self-study, the amount of study you do without being told by anybody; it makes you the man you want to be in the future. The teacher (or Guru) again helps you to focus on one thing while there are millions of parallel events going around the world to lose your focus and waste your time. You might find yourself succeeding in various distinct fields, yes it is very much possible. Humans can create and extend the boundaries themselves but then you often find yourself not the number one. You could be good but can't be the best in the world in everything, there is always someone practicing the same skills and getting better than you in some part of the world and it should be appreciated with acceptance. And, here what this popular saying makes sense is that the Jack of all is a Master of None. But my all-loving readers I would like to share my story here where I grew up learning this phrase in schools and from my parents. During my interaction with the portion of the world in form of the people that I met, I found this phrase made sense, and sometimes it did not. A millennial like me always look for a modification of complex things and truths of life and death to make it simple. My late father who was a businessman used to tell his employees that in this competing World one has to be an all-rounder moreover has to master one particular skill to stand out in the crowd or must say simply survive. Luckily, I was there in his office to hear him telling this to some employee. I was very young when he left this world and all of a sudden I had a different perspective on life. Cheating people, telling lies for small profits of money, frauds, bullying, sexual exploitation, grudges over communities, body shaming, superstition, greediness, impersonation, racial discrimination, depression, and much more that exists on earth and we often ignore it while people have justifications for it. I know already there are a number of books and educating videos available out there then why I am writing this one? Because this is my journey of learning ten different skills after the death of my father and I earned a little or more amount of money utilizing these skills. I could be a victim or a guilty while all above said evils surrounding me, but I was guided well by my mentors, parents, and elders moreover, I accepted that guided path and followed it to get benefited out of it and become an example that the world could learn from, a good example probably. With changes in time and situations, now if a father teaches his son driving a car it won't make a skill worth enough to make a living. Since now most of the people work from home moreover most of the people know themselves that how to drive a car. People need to learn more skills for a better tomorrow. My father uses to take a walk with me in the evening after dinner when he uses to tell me how children make their parents proud or shamed out of their doings. I hope this reached out to him somehow in a good way. ~ CHANAKYA SHUKLA
