Study Guide for Maternal-Child Nursing - E-Book

Maternity Nursing - Text and Simulation Learning System

Contemporary Nursing

Maternal-Child Nursing

The Maternity and Pediatric Nursing book by Ricci, Kyle and Carman is a very informative book that includes comprehensive and straightforward concepts on the health of women and children. All 53 chapters of the book tackles the normal expectations in pregnancy and in the growth and development of children. It also discusses challenges faced during pregnancy until the post-partum period as well as health issues of children from the womb to adolescence. Every chapter of the book provides a strong knowledge base that will immensely help soon-to-be nurses pass critical exams. For student nurses and those who are preparing to take NCLEX, to study a 2000-page book is surely a daunting task, especially if this book comprises only a small part of a study plan. The amount of information therein is massive, and memorizing facts and critical thinking through the application of concepts would be a big challenge, and overcoming this challenge is pertinent to the success of taking nursing exams, especially the NCLEX. The review questions that come after every chapter effectively test the student's application ability. However it is unlikely for the nursing instructors and Nursing boards to use the same questions to test the ability of the students. With the massive amount of information provided on the text book, how would a student nurse determine which concepts to focus on? The test bank we offer is streamlined to include important concepts to review, which would help you gain control of your study plan by providing you concepts which nursing instructors and board examiners are likely to include in the examinations. The test questions are carefully developed according to NCSBN's guidelines on question development. How effective is this test bank in providing the help you need? The effectiveness and quality of this test bank is ensured because those who contributed to the making of the questions and rationales are nurse

educators themselves who are experts in their fields. If you want to enhance your knowledge, application and critical thinking skills further, and if you want to pass your exams, especially the NCLEX, this test bank is the best option for you!

The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.
