Geotechnical And Civil Engineers all over the world continue to face problems with a wide range of geosystems involving materials that remain under partially saturated conditions throughout the year. The lack of education and training among engineering graduates and practitioners to properly deal with unsaturated soil conditions has resulted in faulty or excessively conservative designs, frequent construction delays, and deficient long-term performance of built infrastructure. Over the last few decades, however, the discipline of unsaturated soil mechanics has begun to receive increasing attention worldwide, providing better explanations for soil behavioral patterns than conventional saturated soil mechanics. Experimental and applied Modeling of Unsaturated soil contains 28 papers examining the most current thinking and practices involving unsaturated soils. This Geotechnical Special Publication is divided into two broad categories: general characterization and constitutive behavior, and applied modeling and analysis. The papers in this publication were presented during the GeoShanghai 2010 International Conference held in Shanghai, China, June 3-5, 2010.

Easy-to-apply, scientifically-based approaches for engaging students in the classroom Cognitive scientist Dan Willingham focuses his acclaimed research on the biological and cognitive basis of learning. His book will help teachers improve their practice by explaining how they and their students think and learn. It reveals the importance of story, emotion, memory, context, and routine in building knowledge and creating lasting learning experiences. Nine, easy-to-understand principles with clear applications for the classroom Includes surprising findings, such as that intelligence is malleable, and that you cannot develop "thinking skills" without facts How an understanding of the brain's workings can help teachers hone their teaching skills "Mr. Willingham's answers apply just as well outside the classroom. Corporate trainers, marketers and, not least, parents - anyone who cares about how we learn-should find his book valuable reading." [Wall Street Journal

Growing travel, freight movements, congestion, and international competition threaten the economic well being of the Upper Midwest States. More congestion, slower freight movement, fragmentation, and economic slow down are the probable outcomes if the threats are not addressed. However, planning for and managing the growth of freight transport are complex issues facing transportation agencies in the region. In an effort to crystallize the issues and generate thought and discussion, eleven white papers were written on important factors that influence freight and public policy. The papers provide the background on specific aspects of freight in the Upper Midwest. As a collection, the papers provide a primer on freight issues and related responses that may form the basis for a regional freight agenda. The Upper Midwest Freight Corridor Coalition used input from transportation administrators in Ohio, Indiana, Michigan, Wisconsin, Illinois, Minnesota, and Iowa, as well as the provinces of Ontario and Manitoba, along with the Federal Highway Administration and researchers from the University of Wisconsin--Madison, the University of Illinois--Chicago, and the University of Toledo to draft an agenda to help meet the challenge of freight movement and economic vitality within the Upper Midwest. The agenda identifies thirteen priority initiatives to respond to growing freight demand. Data and technology are needed to support the initiatives outlined in the agenda, and both topics are discussed in subsequent plans. The final report in Volume II is a white paper explaining the importance of transportation to the economic well being of the region.

Geotechnical Hazards from Large Earthquakes and Heavy Rainfalls

Phase II

This book is a collection of papers presented at the International Workshop on Geotechnical Natural Hazards held July 12–15, 2014, in Kitakyushu, Japan. The workshop was the sixth in the series of Japan–Taiwan Joint Workshops on Geotechnical Hazards from Large Earthquakes under the auspices of the Asian Technical Committee No. 3 on Geotechnology for Natural Hazards of the International Society for Soil Mechanics and Geotechnical Engineering. It was co-organized by the Japanese Geotechnical Society and the Taiwanese Geotechnical Society. The geotechnical and natural hazard-related issues in Asia such as earthquakes, tsunami, rainfall-induced debris flows, slope failures, and landslides. The book contains the latest information and mitigation technology on earthquake- and rainfall-induced geotechnical natural hazards. Based on state-of-the-art research in the area, the information contained in this book will help researchers, designers, consultants, government officials, and academicians involved in the mitigation of natural hazards. The findings and other information provided here is expected to contribute to new chapter in disaster prevention and mitigation of geotechnical structures.

This book offers a unique compilation of papers in mathematics and physics from Freeman Dyson's 50 years of activity and research. These are the papers that Dyson considers most worthy of preserving, and many of them are classics. The papers are accompanied by commentary explaining the context from which they originated and the subsequent history of the problems that either were solved or left unsolved. This collection offers a connected narrative of the developments in mathematics and physics in which the author was involved, beginning with his professional life as a student of G. H. Hardy.

This book systematically analyzes the economic dynamics of large emerging economies from an extended Comparative Capitalisms perspective. Coining the phrase 'state-permeated capitalism', the authors shift the focus of research from economic policy alone, towards the real world of corporate and state behaviour. On the basis of four empirical case studies (Brazil, India, China, South Africa), the main drivers for robust economic growth in these countries from the 2000s until the 2010s are revealed. These are found, in particular, in mutual institutional compatibilities of 'state-permeated capitalism', in their large domestic markets, and beneficial global economic constellations. Differences in their institutional arrangements are explored to explain why China and India have been more economically successful than Brazil and South Africa. The authors highlight substantial challenges for the stability of state-permeated capitalism and assess the potential future growth, sustainability and likely pitfalls for these large emerging economies. Opening further avenues for empirical and theoretical research, this book raises questions for the future of the global economic order and should appeal to academics, graduate students and advanced undergraduates in politics, economics, economic sociology and development studies. It should also prove a worthwhile and provocative read for development practitioners and policy-makers.
