Connecting
Dentistry and
Medicine
represents the
collaborative
efforts of a dental
surgeon, Dr. Robert
Kulacz, and a
cardiologist, Dr.
Thomas Levy. For
almost a decade
now, these two
health care

professionals have had the opportunity to directly observe the enormous negative impact that infective dental toxicity has had on the health of many patients. Drs. Kulacz and Levy have also found that the removal of, and

Download Free
Mblex Study

complete healing of, sites of infective dental toxicity can often result in seemingly near-miraculous improvement in many of the patients so treated. At the very least, substantial improvements in the clinical

Download Free
Mblex Study

conditions and abnormal laboratory profiles of many patients so treated have been observed very frequently by the authors. It is the opinion of Drs. Kulacz and Levy that many, if not most, medical conditions and

Mblex Study

diseases result from the inability of the body to completely neutralize its many daily toxic stresses. Certainly, all medical conditions can be expected to be aggravated and worsened by any ongoing and unneutralized toxin

exposures,
regardless of what
may have caused
the medical
conditions to
develop in the first
place. The Roots of
Disease endeavors
to demonstrate that
for most victims of
chronic
degenerative
disease, one or

more sources of infective dental toxicity can be identified and eliminated. While infective dental toxicity occurs in multiple settings, including root canal treated teeth, dental implants, cavitations, abscessed teeth,

Download Free
Mblex Study

and periodontal disease, it would appear that root canal treated teeth do the greatest amount of damage to the health and immune systems of the greatest number of people. The very nature of the root canal procedure allows

Download Free
Mblex Study

the elimination of tooth pain while still harboring a situation of chronic anaerobic infection. Eliminating the most natural warning sign of a deep-seated infection is an especially dangerous situation. And like

Download Free
Mblex Study

anaerobic
infections
encountered
anywhere else in
the body, the
associated infective
toxicity in the root
canal treated tooth
can always be
expected to
eventually overtax
the immune system
of the patient.

However, immune system "collapse" will often occur years after the performance of the root canal procedure, and the proper blame for the subsequent immune incompetence rarely ever gets assigned to the root

canal treated tooth.

A chronic degenerative disease, such as cancer, heart disease, or arthritis, just "appears" one day, and both doctor and patient alike think it is the unlucky and/or inevitable

consequence of aging. Hopefully, this book will both educate and enrage its readers. The appendices in this book further attempt to demonstrate to the reader that a very large amount of hard scientific data already exists to

support all of the
assertions made.

Dentistry and
medicine must
always be practiced
in conjunction with
each other,
although presently
such collaboration
is rarely found.

Dentists and
physicians need to
become working

colleagues on a regular basis. Until this happens, many more patients will suffer from the historical isolation and separation of these two noble professions.
