

## Mc5590 User Guide

***Failure to recognize changes in a patient's clinical condition is a barrier to the effectiveness of CCRT outreach programs. The development of a vital signs capture and decision system could alert care providers and CCRTs when a patient's clinical condition deteriorates. However, point-of-care vital signs capture and documentation is often problematic in clinical practice.Ethnographic research was conducted to understand the difficulties of replacing pen and paper charts and barriers to electronic nursing documentation systems. Analysis of workflows directed the design of two solutions; (1) Apple iPhone facilitated manual vital signs entry, (2) Motorola MC55 enabled automatic data capturing from physiological monitors.Nurses participated in high-fidelity usability testing, comparing the traditional method of paper documentation with the two electronic solutions. As a result of user-centered design process, both solutions were comparable to the efficiency of paper methods, were found acceptable to nurses, and could be successfully incorporated into current workflows.***

***For much of its 122-year history, the Bar U ranch can claim to have been one of the most famous ranches in Canada. This title integrates the history of ranching in Alberta with larger issues of ranch historiography in the American and Canadian West and contributes greatly to the overall understanding of ranching history.***

The official guide to creating pen-based applications has been updated and expanded to include PenPoint 2.0. This new release of the operating system has been internationalized, allowing programs to work in languages other than English. In addition to teaching how to write PenPoint applications for both PenPoint 1.0 and 2.0, the book describes how to use these international features with special emphasis on Japanese.

The modern cruising catamaran has arrived The arguments are over and the verdict is in--cruising catamarans comprise a rapidly growing percentage of the cruising fleet worldwide. Their advantages of space, stability, speed, and handling under power are truly compelling, and modern cats are every bit as reliable as monohulls. This long overdue, in-depth guide will help you choose and cruise the right catamaran for your needs. "An authoritative guide for novices and experienced sailors; the best book written on the subjects since the early 1990s."--"Trimaran" Jim Brown, renowned multihull designer "In Catamarans, Gregor Tarjan shares his enthusiasm for yachts with two hulls, based on years of sailing all types. An excellent introduction."--Dick Newick, legendary catamaran and trimaran designer "If you are contemplating spending hundreds of thousands of dollars on a cruising catamaran, the small price of this book is probably the best investment you could possibly start with."--from the Foreword by Charles K.

Depleted uranium (DU) ammunition was used in the years 1994-95 during the conflict in Bosnia and Herzegovina. Following on from previous UNEP field studies in Kosovo (2001, ISBN 0119869667) and in Serbia and Montenegro (2002, ISBN 9280721461), this report assesses the presence and extent of DU contamination in 14 sites investigated in Bosnia and Herzegovina, the corresponding risks to the environment, and possible mitigating actions. DU could easily be found at three of the sites investigated, confirmed by the physical presence of penetrators and jackets, as well as by soil, bio-indicator and air samples. For the first time in UNEP's studies of DU contamination in the Balkans, DU was also found in drinking wa samples, albeit at extremely low levels, as well as in air samples taken from buildings currently in use. The report recommends precautionary decontamination and clean-up measures. Given the remaining scientific uncertainties on the long-term behaviour of DU in the natural environment, it calls for further studies to be done in other regions where DU ammunition has been used.

The Art and Science of Practical Rigging

A Collaborative Project of the Getty Conservation Institute and the Dunhuang Academy

The Conservation of Cave 85 at the Mogao Grottoes, Dunhuang

The Mogao Grottoes, a World Heritage Site in northwestern China, are located along the ancient caravan routes—collectively known as the Silk Road—that once linked China with the West. Founded by a Buddhist monk in the late fourth century, Mogao flourished over the following millennium, as monks, local rulers, and travelers commissioned hundreds of cave temples cut into a mile-long rock cliff and adorned them with vibrant murals. More than 490 decorated grottoes remain, containing thousands of sculptures and some 45,000 square meters of wall paintings, making Mogao one of the world's most significant sites of Buddhist art. In 1997 the Getty Conservation Institute, which had been working with the Dunhuang Academy since 1989, began a case study using the Late-Tang dynasty Cave 85 to develop a methodology that would stabilize the deteriorating wall paintings. This abundantly illustrated volume is the definitive report on the project, which was completed in 2010.

This guide gives authoritative advice on current tree climbing techniques which are both safe and effective. It has been updated to take into account advances in tree climbing equipment and techniques since 1999. Incorporating the Work at Height Regulations 2005, Health and Safety Executive research and the latest techniques and equipment the all-new AA A Guide to Good Climbing Practice replaces the AA/FASTCo Guide to Good Climbing Practice (1999) and the AA/FASTCo Aerial Rescue Guidance Notes (1997). "The Guide sets out techniques and systems of work that can be considered as best practice guidance in arboriculture and helps anyone in the business meet their legal obligations." Dr Richard Nourish, Head of the Agriculture and Food Section, Health and Safety Executive.

Lord Ainz has made great progress moonlighting as the indomitable hero Momon, but what should be a moment of triumph is shattered--by news of rebellion. He vows to find out what has happened and to defend the honor of his guild and home--Ainz Ooal Gown.

The blockbuster danmei/Boys' Love novels from China that inspired the animated series! This epic historical fantasy about a prince and the mysterious man by his side is now in English, for the very first time. Born the crown prince of a prosperous kingdom, Xie Lian was renowned for his beauty, strength, and purity. His years of dedication and noble deeds allowed him to ascend to godhood. But those who rise, can also fall...and fall he does, cast from the Heavens again and again and banished to the mortal realm. Eight hundred years after his mortal life, Xie Lian has ascended to godhood for the third time. Now only a lowly scrap collector, he is dispatched to wander the earthly realm to take on tasks appointed by the heavens to pay back debts and maintain his divinity. Aided by old friends and foes alike, and graced with the company of a mysterious young man with whom he feels an instant connection, Xie Lian must confront the horrors of his past in order to dispel the curse of his present. This Chinese xianxia fantasy novel series built around the romantized love between two men (danmei) is the newest work from author Mo Xiang Tong Xiu, and has spawned an ongoing multimedia franchise that's beloved across the world--including the animated series (donghua) that amassed 100+ million views in just its first month. The Seven Seas English-language edition will include covers from ￼￼￼￼ (tai3\_3), and exclusive, all-new interior illustrations from ZeldaCW.

Oxford Studies in Medieval Philosophy showcases the best scholarly research in this flourishing field. The series covers all aspects of medieval philosophy, including the Latin, Arabic, and Hebrew traditions, and runs from the end of antiquity into the Renaissance. It publishes new work by leading scholars in the field, and combines historical scholarship with philosophical acuteness. The papers will address a wide range of topics, from political philosophy to ethics, and logic to metaphysics. OSMP is an essential resource for anyone working in the area.

Seventy-five percent of processed foods on supermarket shelves—from soda to soup, crackers to condiments—contain genetically engineered ingredients. The long-term effects of these foods on human health and ecology are still unknown, and public concern has been steadily intensifying. This new book from the Council for Responsible Genetics gathers the best, most thought-provoking essays by the leading scientists, science writers, and public health advocates. Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really controls the power structure of food production? Are GM foods ecologically safe and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, of lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.
