Gastrointestinal (GI) physiology is a fundamental subject that is indispensable not only for undergraduate but also for graduate courses. The audience include, but are not limited to, medical, pharmacy, nursing, human biology, Chinese medicine, and science students, as well as other health-related subject students. The overall objectives of this textbook are to present basic concepts and principles of GI physiology and, more importantly, to convey an understanding of how to apply this knowledge to abnormal GI physiology in the clinical context. As such, the basic knowledge of GI physiology and its application in the form of clinical case studies should be grasped, which are critical for professional examinations and bedside, as well as for general practice in the future. In this handbook, we aim to achieve these elements by covering the breadth of GI, pancreatic, hepatobiliary, and nutritional physiology. Moreover, we include relevant scenario-

based clinical case in each chapter so as to evaluate whether the students can apply the basic GI they learn to the clinical setting.

The Gastrointestinal System

**DIGESTIVE SYSTEM**

Multiple Choice Questions in Anatomy and Neurobiology for Undergraduates is a collection of multiple choice questions in anatomy and neurobiology for undergraduate students. Questions are grouped for each visceral system and the nervous system. In the case of the body framework (including peripheral nerves and blood vessels), however, a regional grouping is used. Each question has the

corresponding correct answer. This book is comprised of eight chapters covering the upper limb, head and neck, musculoskeletal trunk, lower limb, cardiovascular and respiratory systems, gastrointestinal and genito-urinary systems, and neurobiology. Each chapter contains three types of questions designed to test knowledge in different ways. Type A items involve choosing a single correct answer from five available choices. Type L items are used to elicit information on the cause-effect relationship between sets of data. Type E items call for the perception of one or more correct responses among four alternatives, and the responses may be grouped in five different ways. Most questions are also accompanied by an indication of the percentage of students who obtained the correct answer on occasions of previous settings and by a biserial correlation coefficient ( $r$  biserial), indicative of the capacity of the question to distinguish between more able and less able students. This monograph is primarily intended for medical undergraduates and will also be useful to academic anatomists building up their own question banks.
