*Engineer-In-Training Reference Manual*

**Newnes Mechanical Engineer's Pocket Book** is an easy to use pocket book intended to aid mechanical engineers engaged in design and manufacture and others who require a quick, day-to-day reference for useful workshop information. The book is a compilation of useful data, providing abstracts of many technical materials in various technical areas. The text is divided into five main parts: Engineering Mathematics and Science, Engineering Design Data, Engineering Materials, Computer Aided Engineering, and Cutting Tools. These main sections are further subdivided into topic areas that discuss such topics as engineering mathematics, power transmission and fasteners, mechanical properties, and polymeric materials. Mechanical engineers and those into mechanical design and shop work will find the book very useful.

When you're studying for the PE examination using the Mechanical Engineering Reference Manual, you'll be working many practice problems. Don't miss the opportunity to check your work! This Solutions Manual provides step-by-step solutions to nearly 350 practice problems in the Reference Manual, fully explaining each solution process. Solutions are given in the SI and English units.

The Civil Engineering Reference Manual fully prepares applicants for the civil PE exam—by far the most popular of the PE disciplines. Every exam subject is thoroughly covered, with illustrations and practice problems. Extensively indexed and carefully researched, this book serves as a comprehensive manual for daily reference.

Mechanical Engineering is defined nowadays as a discipline "which involves the application of principles of physics, design, manufacturing and maintenance of mechanical systems". Recently, mechanical engineering has also focused on some cutting-edge subjects such as nanomechanics and nanotechnology, mechatronics and robotics, computational mechanics, biomechanics, alternative energies, as well as aspects related to sustainable mechanical engineering. This book covers mechanical engineering higher education with a particular emphasis on quality assurance and the improvement of academic institutions, mechatronics education and the transfer of knowledge between university and industry.
